>ever notice that you get propagation to the west during the evening on 10m,
>by that time propagation to Europe is all but gone, ya see boy, that's cause
>the sun aint shinin no more in Europe. Didn't they teach you that in your
>Freebander Class, Lesson 4 "How to talk skipland" You must have missed it.Now
>go run some power down on 11m so you can 'tighten up' your Lamberts. heee
>heee what an idiot.

Sorry, fat boy. Wrong answer. Why don't you come over to my house and explain
to me why it is that I'm hearing stations to the EAST of me in the evening,
well after local sunset.

Go get some exercise, will ya? That picture of you that was circulating on
here a few weeks ago is pretty pathetic.

5311. Chat room Update

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-21 00:00:00 UTC
From: "Lloyd, N0VFP" <davies.lloyd@mcleodusa.net>
Message-ID: <6mjqm8$130s1@odie.mcleod.net>
Source record: 169284

We had a good turnout for the chatroom last night, FRG9600 and myself and several other SWL's were in there as well as KK7HO and N5HDQ (as mmm) We had good discussions and everyone behaved themselves (we had to kick one out) but went very well, I will be out of town the next two weekends, so the Chat room still will go on, if you want to chat anytime feel free to do so, Especially during the net so we can share jamming/reception reports real time.

Thanks, Lloyd N0VFP

5312. FYI: 20+ FTP Sites

SB DX @ WW $OPDX.362
Ohio/Penn DX Bulletin No. 362

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 362
BID: $OPDX.362
June 22, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1QWT, WB2RAJ/WB2YQH & The 59(9) DXReport, KC2CJB, KH2D, N2OO, W2DEC, N4GN, W4WX, WQ4L, KG6AR, N6ED, N6JV, K8MN, KB8PZQ, K0IR, AH0W/OH2LVG, BA4TB, EA4ECF, F6AJA & LNDX, G4BUE & DX News Sheet, GM4FDM, HA5PP, HK0TU, ZS6IR and 3C5I for the following DX information.

5H, TANZANIA. Dave, K8MN (currently signing OH2/K8MN), reports to OPDX that he will be leaving Helsinki on July 9th and will be in the U.S. until near the end of August. After his short stay in the U.S., Dave will be in Tanzania for three years. As in the past, his activity (with no particular schedule) will be on 160-6 meters including all WARC bands. Operations on CW and SSB will be the predominate modes with RTTY thrown in from time to time. QSLs go to WA8JOC.

7O, YEMEN. Zoli, HA5PP, sent out a new release early Sunday morning (June 21st) stating he has been communicating with the Deputy Minister (of Telecommunications) in Sana'a Yemen. He reports that the they really want to "start/establish hamradio in Yemen..." (which Zoli states "that was the first big surprise to me there... Before I calculated a big contention/fighting about hamradio there.) Zoli has been given an application and has supplied an offer to the Deputy Minister. In it, Zoli has offered to build 4 complete stations in Sana'a, Taiz and Aden. He has also offered to conduct education class of hamradio (QSO, rules, etc) for the Yemenis between September 1st and December 1st. Zolis also mentioned that he made a promise to the Secretary of IARU to help Yemen to join the IARU. He has requested 7O8DX and 7O8CW callsigns for the two stations in Sana'a to operate during the education period (for Aden he requested 7O1A). Zoli reports his second big surprise happend when he found out that the Deputy Minister knew/spoke (a little...) Hungarian stating, "Mr. Zoli I like your application...you will be the first (one of the million, Hi) foreigner operator in Yemen. The first op will be a Yemeni op...foreigner only after Yemeni ops"... Zoli was told that

there are a lot of applications from other hams who would like to operate from 7O-land. Zoli requested them to not lose those applicants and that he promised to collect all the hams of the world who want to help (and to operate from) Yemen. So, Zoli states if you want to help, please, contact him by E-mail at: navus@mail.matav.hu He would like to go back to Sana'a as soon as possible and wants to thank K4TKM and the NCDXF who made the 7O-trip possible!

A5, BHUTAN. Plans for an A5 operation continue. Specific dates are not set yet, but they are hoping to conduct an operation sometime next year, perhaps in February or March. The principal organizer is Zoro, JH1AJT, with other U.S., European, Japanese, and Oceanic operators included. According to Zorro, JH1AJT, permission for the operation has been granted. Frank, AH0W/OH2LVG, who received a message from Zorro Friday morning, states that it appears Zorro will prepared an announcement with the full details of the operation sometime in July.

CARIBBEAN ACTIVITY PLANNED. Look for the "Uruguay DX Group" and the "Centro Radioaficionados Montevideo" in another joint-venture to activate some Caribbean islands this coming July and August. They will start their activity as XF3/CX3AN from Cozumel Island (IOTA NA-045) July 9-13th. They will then continue on as VP5/CX3AN and VP5/CX4CR from Providenciales (IOTA NA-002) Caicos Island July 18-27th (2 operators active). The final leg planned will be on the air as VP2ECR (operator CX4CR) from Anguilla, August 3-10th. Activity will be on all band including WARC bands with special emphasis on 40 and 80 meters in the usual DX-windows. QSL Manager will be Gustavo Sanchez, CX3CE, Box 244, Montevideo Uruguay. (Do Not use the 1998 Callbook).

CE0, EASTER ISLAND. Ed, K8VIR, currently active as FO0HAR, will be going here around June 24th or 25th. His callsign has not been mentioned, but keep a look out. QSL via home callsign.

EI, IRELAND. Jose, EA4ECF, reports to OPDX that he will be in Ireland from July 2th to August 8th. During his stay, he will be on the air as EI/EA4ECF, on CW, SSB AND RTTY, on all the bands. QSL via EA4ECF. Meanwhile, "The 59(9) DXReport" states Tom, W0GLG and XYL Glenys will be active as EI4VVF and EI4VVF/P from Inishmann Island (EU-006) in July while on holiday. Activity will be on 80-10 meters SSB.

HK0, MALPELO. The Malpelo 1998 DXpedition Committee (HK0TU) announced the following in a press release: "Please be informed that the official 1999 Malpelo DX pedition is now well underway. Operation has been planned between September and November of 1999. This expedition is totally backed by the LCRA (Liga Colombiana de Radioaficionados). Complete details will be given on a later date. This is the 1st offcial statement regarding this DXpedition, and we will continue to give statements regarding this matter by these same means."

IOTA NEWS.....
NA-111. Bob/N2OO and John/N2LD plan to operate as N2OO portable from Long Beach Island (USI NJ001S) during the IOTA contest July 25-26th.

QSL via N2OO, PO Box 345, Tuckerton, NJ 08087-0345.

Didier/F6ELE and Bertrand/F6HKA will be in Canada (VE2/) from July 9-23rd. During the month of July, they will be active from the following IOTA islands: Sept Iles (NA-125) July 9-11th, Mingan (NA-176) July 12-14th (while here, they will also try to be active from Anticosti NA-077), Harrington (NA-084) July 17-18th, and Bonaventure (NA-177) July 21-23rd. They will have 2 stations with them with a beam and dipoles. QSL to their home call direct or bureau.

Jack, F6BUM, will be active from Sardinina as IS0/F6BUM (IOTA EU-024) from July 27th to August 13th. He will also try to be in San Pietro (EU-165) from August 7-8th.

Serge, F6AUS, will be active from Corsica's coastal islanda as TK/F6AUS from July 2-29th. He will be active from Lavezzi (EU-164) and Cerbicales (EU-100) during this period. He will try to be active during the IOTA contest from an island from EU-164.

NA-187. Norm, N6JV, will try to be active as N6JV/p from White Rock on July 3 or 4th. The tide, surf and fog conditions will determine days/time of operation. He suggests that about 1800z will probably be a good target time. Operation will be on battery power with an IC-706 Mk2 and a vertical antenna. Watch 14260, 14040, 7260, and 7040 on SSB and CW. QSL via home address.

OTHER GUAM DXER LEAVES. Gary, K9AW/KH2 (aka NH2G, KH2L, NY6M/KH2) will be leaving Guam in few weeks and retiring to the Philippines. Gary was by far THE most active HF operator on Guam, having worked hundreds of thousands of stations on HF from Guam. Jim, KH2D, reports "Ham Radio" in KH2 (and KH0-land) is at an all time low, mainly speaking HF operators (the rest carry their shack on their belt). Jim suggests the downfall has to do with the military downsizing which started a few years ago. This cost Guam most of their Dxers and contesters. He states that they have lost five HF operators in the past six months, including K9AW. Currently in Guam, there are two active HF operators (N2NL/KH2 and KH2D) and in Saipan, one active HF operator (WH0AAV). In the fall of last year, the remaining few HF operators have decided to form a club called Mariana Islands DX Association that would unite the hams in Guam and Saipan, and would attempt to promote HF operating to the "new" hams. For more details on MIDXA, visit their Web page at: http://www.guam.net/pub/midxa

OD, LEBANON. Jim, OD5PN, has been found to be active over the last week on 15 and 20 meters SSB. Check 14223, 21205 and 21245 kHz between 1330 and 1430z, and again around 2000z. QSL via LX1NO. Meanwhile, "The 59(9) DXReport" states Jean-Pierre, F6FLV, is active as OD5RAK until June 30th.

QSL INFO AND NEWS.....
H40AA/H44DX QSL release at Friedrichshafen. H40AA and H44DX QSL cards will be released to the public for the first time at the Friedrichshafen ham convention by OH2BE, OH2BH and OH2TA as follows:

DARC DX DEPARTMENT, QSL CORNER GERMAN DX FOUNDATION - GDXF
Friday, 26 June, 1 P.M. thru 6 P.M. Saturday, 27 June, 2 P.M.
Saturday, 27 June, 10 A.M. thru 2 P.M. thru 4 P.M.

Finally, cards will be issued following the 4 P.M. H40AA presentation by OH2BH & OH2TA at the DX Meeting. You are welcome to pick up your QSL cards and meet these H40AA team members during one of the above sessions.

UPDATE. The logs for 3W6KA, 3W6LK, and 3W6WE are available for online checking. The URL is: http://njdxa.org/log-check.shtml

Correction! Alan, 3C5I, reported that OPDX.345 (Feb.28th) had an incorrect QSL address listed for him. The correct address is: Alan Isaachsen, c/o Mobil Equatorial Guinea, P. O. Box 139082, Dallas, TX 75313. (ed. The PO Box needed one more digit!)

QSL CHANGE. QSL BI4Q from Ping Island via BY4RSA, not to 9A2AJ. BI4Q has a Web site at: http://www.qsl.net/jsdxc/index.html

MORE LOG SEARCHES via the WEB. A new log search containing Mike's (K3UOC) entire logs for 7Z5OO and also operations from PJ5AA have been add to the following Web site:
http://www.qsl.net/n6ed/7z5oo.html
7Z5OO was active from November 11, 1994, through May 31, 1998. He is now QRT. PJ5AA was active during April, 1996, January, 1997, and January, 1998.

SPECIAL EVENT. Ed, ZS6Y, reports that he will be active until July 31st as ZS80NRM. This special callsign has been issued to celebrate the 80th birthday of President Nelson Mandella. Activity will be on 10, 15 and 20 meters with operations on CW/SSB/SSTV. QSL via ZS6Y: Etienne Swart, P.O. Box 12, Strubens Valley, 1735, South Africa. Ed states, "Please SASE w/green stamps, cannot use IRCs, SRI!"

SPECIAL EVENT. The Noble County ARC will activate KB8YWE (call subject to change) from 1300z to 1900z on September 26th and 27th. SSB operations will take place on the following alternating frequencies: 28450, 21350, 14290, 7275 and 3900 kHz. The station is commemorating the first oil well drilled in North America in 1814 and still in existence. This well is located in Noble Co., Ohio. Please send a 9" X 12" SASE for certificate to Noble Co. Amateur Radio Club, c/o Paul Wallace, 816 Main St., Caldwell, Ohio 43724.

SPECIAL EVENT. The USS Salem Radio Club is sponsoring a "Museum Ship Special Event". There will be about 15 or 20 museum ships from around the world coming on the air on July 18 and 19th. If you contact two or more of these ships, send your log info to Robert Callahan (W1QWT), 56 Acorn St. Scituate, Ma. 02066, and you will be sent a certificate. Please provide a SASE suitable for a 8 by 12 certificate. Check out the WEB page http://www.ziplink.net/~rcal/salem/ or http://www.uss-salem.org for more info.

S0, WESTERN SAHARA (S07WW update!). Ghis, ON5NT, reports that Mark, ON5WW, is leaving for S0 early Sunday morning (June 21st), and he expects to be active the same evening. So, by the time you read this Mark should be on the air. He will leave S0 either this coming Thursday or Friday.

U.S. COUNTIES NEEDED. Uli, ZS6IR, requested OPDX to publish that he will be active from July 5-28th, looking for US counties once again. Any specific informations or suggestions for frequencies and times would be very much appreciated and can be sent to: VonAswegen@aol.com

V2, ANTIGUA & BARBUDA. Tom, GM4FDM, states that he and a Scottish crew will activate V26VG during the IOTA Contest, July 25/26th. QSL to GM3UTQ direct or bureau. After the contest the crew will be active using their own callsigns /V2. QSL for these contacts go to their home calls. Their priority will be given to WARC bands after the contest.

VP5, TURKS & CAICOS ISLANDS. The "DX News Sheet" reports that George, N2GA, and Diane, K2DO, will be active July 8-14th as VP5/N2GA and VP5/K2DO from Providenciales Island. Activity will be on CW/SSB and an entry during the IARU HF World Championship as VP5GA. QSL via home calls.

VP5/K5YG TRIP CANCELLED. Bill, K5YG, and his XYL Susan were supposed to make a trip to the Turks and Caicos Islands from where he was going to be active as VP5/K5YG during June 14-20th. This operations is now cancelled due to the sudden passing of Bill's daughter (35 years old). OPDX will like to send out our deepest condolences to Bill and his family.

WP2, VIRGIN ISLANDS. A newly formed DX club in Northeast Florida called the "Florida DXPedition Group", is planning to go to St. Croix and be active in this year's CQWW SSB Contest as WP2Z. Some of the members of this group are the same operators who were active as C6AJT from the Bahamas in the 1997 CQWW SSB Contest. By the way, this group states that their goal is be active from a different place each year. For more info on this group, send an E-mail to: dxpg@ac4et.ampr.org (addressed Attn: Secretary)

YO8, ROMANIA. A Romania and Moldova team are planning an expedition to Toaca Rock (QTH-KN36AX) June 27th to July 7th. Operators included YO8CT, YO8CGH, ER1AN, ER1BF and ER1AU. Activity is planned for all HF bands and 50/144/430/1296 MHz with the special callsign YO8KVS/p. QSL via Romania QSL bureau. To get more information (pictures and map) on this Expedition, check out the Web page: http://members.xoom.com/kc2cjb/yo&er.html
Or contact via E-mail to: YO8CT - cristiyo@mail.rtns.ro
ER1AN - er1an@acad.moldnet.md

ZF2, CAYMAN ISLANDS. John, ZF2JI, reports that a group of VE amateurs expressed an interest to be active from here as a Single OP/Mulit-Band effort in this year's CQWW SSB Contest. Operations will take place from Andrew's (ZF2EJ) QTH. QSL via KG6AR, Chris Williams, 1117 S. Del Mar Ave., San Gabriel, CA 91776-3034.

You're not just paying for the cost of the components (your computer's components run in the neighborhood of just a few dollars) but rather the time spent by the person designing the item and performance tests to collect the specs. We're still waiting for you to post an ASCII diagram of an RFI filter you've designed (make sure it's original). As requested before, explain your choice of components and how your circuit operates. Include specs and list the test equipment and methods you used to gather such specs.

Ok, I'll be glad to do that but I don't know where you live since your a pathetic anon with no name or address.If you even had a remote clue about propagation you would have known that the comment made by the other poster about 10m going down with the sun was a general one. Certainly your going to hear stations from the east after sunset, but any fool can look at propagation forecasts and see that on 10m, Europe at 11:00pm EST is NOT where you have the best propagation, it's to the West or South. Assuming the station in lives on the east coast. There is a reason the MUF goes up with sunspot activity, when the sun isn't beating down on the ionosphere above you your not benefiting from the sunspot activity. Now do you have a better understanding of how 'Skipland' works Libnet?

By the way, 6'3" at 180lbs doesn't quite qualify for 'fatboy' although I could drop 15 lbs and be happy. Funny how you throw around the insults but never bother to refer us to YOUR home page with YOUR picture. Oh well, if I behaved like you I probably wouldn't want anyone to know who I am either.

Source record: 169305

I have some personal knowledge about the O'Brien
criminal case.

For O'Brien to point a guilty finger at someone, is like
Bill Clinton accusing someone of cheating on their
wife!

O'Brien was found guilty of possession of controlled
substances with the intention to distribute. He was
also convicted on a second count of possession of
a controlled substance.

He was sentenced by the Honorable Arthur Fudger on
June 24, 1993. Assistant District Attorney Jeff Ballew
had, among other things, recommended mental health
treatment for O'Brien. Additionally, Jimmy had a
DUI offense on his record.

Judge Fudger sentenced O'Brien to SIX YEARS on
the intent to distribute charge, and required Jimmy
to serve at least two years of that in the state prison
system. On the second count, possession, O'Brien
was sentenced to TWELVE MONTHS, and the good
judge required ALL of that to be served. However,
both sentences were allowed to run concurrently,
with credit for time already served.

Jimmy made parole in just a few months, but was
not released from parole until last summer. As we
all know, that was the exact time O'Brien went
crazy posting his hate in the news groups and
creating libelous web pages.

It's just my opinion, but he's probably 51 cards short
of a full deck and operates without all oars in the
water.

Dont know on this...havent built one of them...

> VOM meter). Also, can you make some decent DX contacts with the thing
> running only 7 or 8 watts FM into something like a dipole or 5/8 wave
> whip antenna when 6 Meters open up. Also, what would be a good

Yep!! I have worked 6mtr FM DX with 1 watt HTs and "luggy talkies"
back in the mid 70s! 7-8 watts will do fine on 6 when it opens...
Ive worked 6 SSB and CW with 5 watts into a 220 5/8whip...YES a 220
antenna!!!! :)

> frequency for me to tune to on my scanner to hear DX contacts on FM
> whenever the band opens up? Please e-mail if you can answer any of
> these questions Thanks in advance.

National simplex freq on 6 is 52.525...plug that into a scanner
plus some FM rptr outputs like 53.01, 03, 05, etc.....also
check 50.4 for AM activity.....(sometimes the MUF-Max Usuable Freq-
doesnt get above 51 Mhz anyway...so the low end may be open while the
FM part is dead!)

Average price for 850s now is $400 to $1000 depending on the sucker
errr the buyer!!!! They really aren't worth the money now that the
LinkComms are out and can do more for less....I DID see two RC96s
going for $475 each...considering it sold for over $1200 new, thats
not bad....but the technology is old now....newer controllers are
available for same money...

(a RC850 can have up to Ver 3.8 software.....but that includes
the optional Computer Interface Board...without it, Ver 3.42 is
highest allowed)

Have you served?

I have been for 18 years. My son is at Ft Bragg. My other children
will follow. But I do feel that you need to serve in the protection of
of community: military, police or firefighting.

All the branches have great technical programs. It is a great way
for kid to advance right out of high school. My son went combat arms
and received $8000 signing bonus plus GI bill. Now the Army wants
to sent him to college to be an officer. I do not worry about them going
to college. Plus in an age when too few serve, being a cop or a soldier
looks good on a resume.

5340. Who is causing all the problems on Ham Radio?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-21 00:00:00 UTC
From: "Dean, Greg" <N9NWO@GTE.net>
Message-ID: <6mkhpk$q5u$1@news-2.news>
Source record: 169313

Could anyone give me a list of all the hams that are causing problems on our bands, especially on 3950 Khz? I had been writing done callsigns as people mentioned them but my kids lost the list.

I plan to use them in a formal complaint to my congressman. If only 50 hams write their congressman, it might generate enough pressure on the FCC to act.

Is less that a Week away! Are you ready? That is for some fun!
I'm thinking about some awards this year that pretain to 75m operation this year, on the Key freq, 3950 thats 3-9-5-0

Do a search for 3950 events and 3950 awards and KK7HO and K5BLB. You'll get the picture.

I wonder How the Liberty Net will be ran, I mean with all the Field Day ops? I'm sure Vic,W1WCR, our fearless Leader will keep on trucking through maybe even get some kids involved, On other hand, K5BLB will come all out this year with his noisemakers, Tarzan Yells, sirens, "faggots" and death threats. Tiny Tim, KK7HO will sit in the backgroud and will orcrestrate this nonsense, directing Sid when to play a tape. W9ART will say "blah,blah,blah,blah," all night or his new phrase "#$%^&# burping #$%^&"

We'll see come Saturday!

Se ya,

Lloyd, N0VFP Very Fine Person

>In the grander scheme of things, the
>historical value of what we have done
>here is nil. -- proverb
>-----------------------------------

Hi Ray .

One of my friends had a similar problem with a PIR device,
although not 'touch sensitive' it was picking up his RF on its
Power cable, we proved this by moving the power cable here
and there, and got varying degrees of 'pickup' and it was
cured eventually by using a clip-on ferrite ring,
i guess this may well take a little bit of fiddling about with,
as we found different numbers of loops, and the size and
location of the ferrite along the cord made a noticeable
difference.
Curiosly enough, the actual diameter of the loops we wound
through the clip-on ferrite was not critical at all.
maybe even, if your neighbour has a long enough power cord,
maybe even winding loops in the power cord without ferrite
would have some effect, or possibly, if the power cord is
just ' the wrong length ' and is acting as an aerial,
maybe simply using a plug-in extension may change the
' resonance ' or it may put the lamp end at a 'null'.
either way, good luck, RF interference is set to peak
in a few years Ray ..... IMHO

Good Luck Ray

Mark

Who's playing the tapes of "Mr. Bob" calling on the phone and talking to some Chinese-sounding lady? "Oh, Mista Bob...Mista Bob not here."

Damn funny stuff!

Is that all you got. If you are so smart why do only make 5 dallors an
hour and live in a trailer park.

I just got one question that has been bugging the hell out of me for the last 3 minutes. What exactly is a "trailer dewler"? Is that supposed to be spelled d-u-e-l-e-r, as is dueling? how does one have a duel with trailers? Or does the duel take place using more conventional weapons, INSIDE the trailer? Do the duelists each repair to his own trailer, and at a pre-arranged signal, open fire on his opponent's trailer? This is confusing.

The thing that bothers me most is the over all "low life.. ignorance and
mean spiritedness that prevades 75 meters. Ham radio has always had its
misfits, but never before have they been some numerous a prideful.

Of course I see this in part from the relaxation of entry requirements. There
really is little or no technical interest or competence amongst most ops.

Does this mean H.R. is dying.. yes, I think so, at least as I have known it
and enjoyed it. But, although these warts stand out the vast majority of ops,
may still be decent human beings.

5369. The DEATH of Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-21 00:00:00 UTC
From: 811a@englandmail.com
Message-ID: <358cf8fc.3313716@news.cei.net>
Source record: 169363

Yet another example of the ongoing decline of ham radio.

TIMEWAVE FILES CHAPTER 11 BANKRUPTCY

Amateur Radio equipement manufacturer Timewave Technology
(http://www.timewave.com) of St Paul, Minnesota, has filed for Chapter
11
bankruptcy. Timewave President Randy Gawtry, K0CBH, says Timewave
plans to
continue normal operations while it prepares to file a reorganization
and
debt payment plan with the federal bankruptcy court. "The process now
is in
the early stages," he said. The move comes a little more than a year
after
Timewave acquired rights to the AEA digital product line after AEA ran
into
financial trouble. Timewave is best known for its DSP filter
accessories,
such as the DSP-599zx.

"We're still operating and we're still doing repairs and upgrades for
our
DSP products," Gawtry said. "Nobody should panic."

Gawtry said the company still expects to have its new DSP-2232zx
multimode
TNC on the market later this year. But he conceded that under Chapter
11
bankruptcy, "any number of things can happen." The company has 60 days
to
file its reorganization plan, which must be approved by the court and
by the
company's creditors.

Date: 1998-06-21 00:00:00 UTC
From: Piet Piraat <piet.piraat@rdr.nl>
Message-ID: <01bd9d20$73304720$f3ebadc3@default>
Source record: 169365

http://members.xoom.com/kneh/

462-club: Conspiracy of young radioamateurs (whether or not licenced by the minister)in South-East Brabant,
a province in The Netherlands. Disputed right from the start.Hated by VERON-departments (The Dutch
version of the ARRL) in Helmond and Eindhovenand (not very effectively) counteracted by the HDTP (The
Dutch version of the FCC).Adored by lots of young and bright (novice) radio amateurs, radio-and television
piratesin the wide surroundings. Notorious because of extremely strong signals and progressive
ideas. Counterpart of VERON in Varkenswaard. Source of brilliant Engineers in Electronics.

5372. Newsline zipped file?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-21 00:00:00 UTC
From: k6mhe@jps.net
Message-ID: <358d1358.2637088@news.newsguy.com>
Source record: 169366

Does anyone know of a site which offers zipped realaudio file(s) of amateur radio newsline bulletins? Due to net congestion I can not get good audio without chops, blanks, and distortions. Being able to download the file first and then playing it would solve the problem.

Thanks
Danny, K6MHE

5376. Re: Who is causing all the problems on Ham Radio?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-22 00:00:00 UTC
From: 811a@englandmail.com
Message-ID: <358eee90.1514512@news.cei.net>
Source record: 169120

The FCC doesn't really care anything about what we do. Sort of like their approach to the CBers back in the 70s. They know that this will all die out if just given time. As the old farts pass on, so to will Amateur Radio.

<snip>

You wouldn't need a moderator if you knew how to use a killfile. You could also just ignore the posts of those who upset you so much.

I came to USENET to get away from dictatorial Fidonet moderators who have a need for power that must be fed at everyone elses expense.

This is USENET. It's unrestricted freedom at its best and I, for one, intend to fight to keep it that way, so deal with it!

As for libraries, they can do whatever they want. I go to libraries for books. Not to use their internet services.

Changing my Ringo Ranger antenna from 146.xxx to 172.xxx.

Anyone out there know the new measurements for the antenna ?

I think the RR only goes to 160.xxx per manufactures specs, but
still would like to use it for 172.xxx

Would appreciate it.

- Vince

5380. FS:KPC3,Data Radio and Modem!

Hello,
I have the following items for sale! All are in excellent condition and all
still have receipts and boxes.

1) KPC-3 Plus. Asking $100.
2) Alinco Data Radio. Operates on 2 meters, no mic. This was used for
Packet radio. Never in car. Model DR:1200T. $300.
3)Sportster external 33.6 modem. Upgradable to X2. $140

Any questions on any of the above, please drop me a note. I tried to make
this ad very short.

Thanks,
Art

5381. FS Eletro Voice Microphone

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-22 00:00:00 UTC
From: "j.kyong" <j.kyong@worldnet.att.net>
Message-ID: <6mn31b$agp@bgtnsc03.worldnet.att.net>
Source record: 169125

Hi all
I have for sale microphone
Make an offer (New in Box Dark Gray Color)
Model 602F Dynamic Moise-Cancelling Microphone
Specifications
Element:
Dynamic
Frequency Response:
200 to 5000 Hz
Polar pattern:
Bi-directional, pressure guradient
Impedance:
Hi-Z and 150 ohms(Lo-Z)
Output Level:
-60dB
EIA Sensitivity Rating,
150 ohams:
-154dB
Hi-Z:
-158dB
Diaphragm:
Acoustalloy
Case Material:
Cycolac
Dimensions:
68.3mm(2-11/16")wide x
58mm(2-9/32")diameter x
98.4mm(3-7/8")high
Finish:
Gray leather grain
Net Weight:
298g (10.5 ounces), less cable
Switch:
On-off switch provides two separate circuits, one shorts microphone in
OFF position, removes short circuit in ON position. Second circuit
available for external relay circuit.
Cable,
Hi-Z:
3-conductor(one shielded)
coiled cord, extends to
1.8m(six feet)
Lo-z:
4-conductor,(two shielded)
rubber-jacketed coiled cord

extends to 1.8m(six feet)
Accessiries:
Dash mounting bracket
Tel:714-778-5151
Thanks

5382. Free Antenna Program for Wire/Vertical

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-22 00:00:00 UTC
From: Curtis M LaFon <n5hdq@wf.quik.com>
Message-ID: <358F20A5.2DDA26FA@wf.quik.com>
Source record: 169126

Available at my web site on the Ham page is an antenna program
that I wrote which is available for a free download. It is
nothing
real fancy but has a couple of not so standard designs.

While your there take a look at my Gun Page, help REPEAL BRADY.

73

--

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I could not think of anything witty to say here.
So I plagiarized Lee Taylor.

If ignorance is bliss,
anti-gunners should be the happiest people in the world.

5383. Clubs in Northern Virginia?

Newsgroup: rec.radio.amateur.misc

Hello,
I have the following equipment for sale. All is in excellent condition and includes boxes and receipts.

1) Kantronics KPC-3 Plus. $100.00
2) Alinco 2 Meter Data Radio. No mic, this was used for packet radio in my shack. $300
3) Sportster external 33.6 modem. Upgradable to X2. $130.

Please, feel free to ask any questions on the above equipment.

Thanks,
Art...

Hi,

Does anyone have the smallest idea regarding how a
Drake T9000E data terminal works? I know to connect
the "composite" output to video in on a monitor.
The audio in is plain. Oscill outputs to x/y scope inputs.
PTT goes to PTT. Must work for fsk, but why is there an
"FSK Keyer" AND PTT?
What are the specs for and how does the light pen input work.
Why use TTL IN?
Why are there RS232 IN&OUTs as RCA connectors and not a db25?

Any help would be appreciated!

73,

Larry

5387. Help needed with JW Miller Coils

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-22 00:00:00 UTC
From: daren@universal.net.au
Message-ID: <358dd611.1629459@nntp.universal.net.au>
Source record: 169131

I have a 1965 plan for a downconverter but it only describes the coils
as J.W.Miller.Co part numbers 20A687RBI,20A827RBI and 4204

would anyone know what these coils are so I could wind them???

Thanks
Daren

5388. Re: Regulator Circuit for Solar Battery Charging ??

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-22 00:00:00 UTC

What would you consider your level of Electronic expertise? I'll offer a few suggestions and then you can respond with what you need or feel comfortable with.

1. You could charge the battery with no additional components if you had enough panels connected in series to exceed the nominal battery voltage (approx. 13.5v). You would have to monitor the battery voltage and remove the panels when the voltage reached that level to prevent overcharging. Depending on the size of the battery (a small Gel Cell) you might also have to limit the charging current with a small resistance in line with the battery. A blocking diode might also be necessary if the panels were left connected in a low or no light condition.

2. There are three terminal fixed (13.8v) and variable voltage regulator IC's available that require very few additional components and with the right heat sink can handle five amps, or more with additional components (pass transistor), and set at 13.8 you could leave it connected to the battery forever.

3. Simple battery charger circuits are available that will charge at a high rate until the battery reaches full voltage, then switch to a trickle or off until the battery voltage drops low enough it switches back to high charge rate. Depending on the circuit design, some of these tend to be quite noisy.

If it were my choice I would build a supply based on a three terminal regulator, filter it well (for noise suppression), supply it with a transformer 120v to 15-18v. Bring terminals to the outside of the case connected to the circuit after rectification so you could switch between 120v or solar panels depending on the light conditions and load requirements to supply the regulator chip. Depending on how well stocked your electronic junk box is the cost could be very low. If your construction skills are not up to the above, aquire a supply designed to feed a mobile radio and tap in after the rectification for the solar panel.

Let me know how you would like to proceed and I'll gather up some information for you.
Louis

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z JUNE 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 22 JUNE AND FORECAST FOR 23 JUNE - 25 JUNE
STATUS INDICATORS SOL:GREEN MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 22 Jun: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 22 Jun: 101/49

GOES satellite data for 21 Jun
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.00E+07 (normal)
X-ray background: B3.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Jun 24 Jun 25 Jun
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Jun: 101/49

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 22 Jun: Quiet to unsettled

Estimated Indices 22 Jun : A K
Learmonth 10 3222 2233
Fredericksburg 8
Planetary 10

Observed Indices 21 Jun : A K
Fredericksburg 13
Planetary 15 4344 2223

2B. MAGNETIC FORECAST
Date Ap Conditions
23 Jun 8 Quiet to unsettled
24 Jun 8 Quiet to unsettled
25 Jun 10 Unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
22 Jun Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
23 Jun Normal Normal Normal-fair
24 Jun Normal Normal Normal
25 Jun Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
22 Jun 54

Observed Australian Regional MUFs:
Darwin: 15-30% depressed to near predicted monthly values.
Townsville, Sydney and Mundaring: Near predicted monthly
values.
Hobart and Christchurch: 15% depressed during the period
0000-0600UT, after which near predicted monthly values.

Predicted Monthly T index for June: 71

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
23 Jun 60 near predicted monthly values/depressed 15 to
30%
24 Jun 65 near predicted monthly values
25 Jun 65 near predicted monthly values

At the rate things are degenerating on this newsgroup, soon the r.r.a. groups are likely to be blocked by NetNanny and the other filter programs. Imagine, you wont be able to read USENET at municipal libraries. I hope this group is eliminated in the next r.r.a. re-organization, and the remaining groups moderated. I and a group of Phoenix-area hams are taking comments on a proposed set of moderated LISTSERVS for people still interested in amateur radio. They will be based at the uswest.net and asu.edu domains.

Or if you a webophiliac and willing to get your callsign a day after it is
issued instead of on the same day, try http://www.lantz.com/htbin/cbs_today
once a day starting about 7 days from your testing date and look for your name
in the list of new calls. This site shows all FCC actions resulting in
callsign changes/additions for the previous day.

Source record: 169182
Cross-posted to:
rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.swap

Hi,

I thought this went to Deja News, but I'll send it from here as I don't
see it!

I need a ham to help me with Field Day contacts.
I have the makings of a pretty good 2B Field Day station:

HF: Drake TR-7, MN-2700 Tuner, G5RV Ant, longwires, etc.
VHF: Kenwood TS-700SP, Mirage B2516-G amp, Cushcraft 124WB (10 dB)
wide-band antenna for 2M.

I'll get generator, poles, guys, ground rods, etc.
I'll rent/buy a tent, table, cables etc.

I'd like to set up near/on Chippens Hill in Bristol, CT.
My parents live there, so does my brother and their kids.

I'd like everyone to see Field Day without a lot of driving.
I live in Boston but will come down Fri PM or Sat AM.

If you know any companies or people that own any of those
empty fields on Chippens Hill or South Mountain or Compounce
Mountain, let me contact them!

I'm 39 and live in Boston. I used to do Field Day with
the Bristol Radio Club, W1DHT. This was in the early
1970s.

One reason I don't want a "big" super FD multi-op site
is I just bought the TR-7. I've heard about issues with
strong local stations (like 10' away!) causing problems
with the TR-7. Also, I'd like to be able to spend some time
with my parents/etc.

Please email me if your interested, or call me at work on
(617) 985-4720. If you have any suggestions for a good 2B
station, or can think of any strategy that would help a
one man station, mail/call also!

Yes it's that time of the year again, Field Day is coming. Time to harass your town and state officials until they notice you. Here's a sample proclamation you can use ! Just get out your crayons and fill in the blanks.

SAMPLE PROCLAMATION

CITY OF _____

OFFICE OF SHOGUN _____

WHEREAS, the City of _____ has more than ___ licensed Amateur Radio operators who have demonstrated their inability for public assistance by creating emergency radio situations; and

WHEREAS, these Amateur Radio operators donate these services free of charge to the City, in the interest of getting in their name in the City newspaper as well as out to the world; and

WHEREAS, these Amateur Radio operators are on alert for any radio store, local or world-wide, and practice their hamburger flipping skills during the Antiquated Radio Relay League's Field Day exercise; and

WHEREAS, these Amateur Radio operators are on alert for any McDonalds, Dunkin Donuts or Arby's, local or world-wide, and practice their face-stuffing skills after the Antiquated Radio Relay League's Field Day exercise, which actually involves little or no actual exercise; and

WHEREAS, this year's Amateur Radio Field Day will take place on June 27-28, 1998;

NOW, THEREFORE, I, _____, Shogun of the City of _____, hereby declare the week of June 21-28 as

AMATEUR RADIO WEEK ALSO TO BE KNOWN AS THE LONGEST WEEK IN THIS TOWN'S HISTORY

in recognition of this unimportant and useless emergency preparedness CONTEST, and in recognition of the idea that you can't actually set up three towers during a real emergency nor would you go outside and hang antenas in trees, I call upon all citizens to pay homage to the American Radio operators of our City, the purpose of which is to get these geeks out of my office.

Marty,

Y'all need to get some new material, perhaps
Trashy Radio could go out and do some checking
on someone,

Our "Bubba" bubba@Paulding.com has gone
on the road, and he promises some new Jimmy
material here right quick.

5415. Re: WARNING - WB2OTK Brings Scam to Internet

Jimmy Jimmy, stop this posting of people's addresses,
just because ole NK4D told you to think about all those
"LOCK DOWN's " you experienced in prison.

AND Jimmy Bob, we all know how sensitive you are
about your address in Paulding County. Jimmy,
your 4272 Worth Street address is bogus, and you
are lying to the FCC, but then you pedaled drugs from
your West Griffin Street hovel until the narcotics
squad raided you.

Anyway, Jimmy, Bubba Bubba@Paulding.com
has been out doing some checking, and you do not live
in Dallas, GA Jimmy. Yes, you are in Paulding, but
you do not live in or near Dallas.

Stop this childish posting of people's addresses Jimmy.

Should Bubba look in the Southeast portion of Pauldng
Jimmy?

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <661>

.....
>From the Editor's Desk:

Ahhh, feel the warmth, Californians? That's the sun, something we haven't seen or felt in quite a while. I hope you've enjoyed it; for it brings us right into wildland fire season. Time to change your rain gear for your fire gear! Oh well... it's said that California has four seasons of disasters: floods, fires, earthquakes and riots... Get ready for the summer!

Stay safe, everybody... See you next week! Dave Larton, Editor
.....

>From the mailbag:

Hi Dave:

I am looking for any one here on the Newsletter list in the Oklahoma City area; it you would, please write me at: N6YR@IDIR.NET

Jim Canaday N6YR
.....

>From Bill Pennington <Bill_Pennington@oes.ca.gov>:

Please welcome Jerry Boyd as the new State OES Mutual Aid Region III ACS Radio Officer. Serving 30 years in law enforcement, 20+ years in emergency services and 40 years as a Radio Amateur he brings a wealth of experience to our organization.

>From 1967-1975 Jerry served as a Deputy Sheriff & Sergeant in L.A. County's Sheriff's Dept. In 1975-1981 he served as a Lieutenant then Captain in the Irvine Police Department and was the Assistant Director of Emergency/Disaster Services.

In 1981 he became the Chief of Police-City of Coronado and the Director of Disaster Preparedness. Here he played the key role in creating the Coronado ARES/RACES group which assisted the city with both special events and emergencies. Membership eventually grew to about fifty and the city ultimately provided VHF/UHF repeaters for use by the amateurs. This organization built and maintained comm vans for the city (the city paid the costs and the hams did the work) In 1984 he produced, directed and filmed his first video for the ARRL.."At Any Moment". His organization, serving as ARES amateur radio operators, provided public service communications each year for a 4th of July celebration (over 125,000 spectators) which included a parade, Navy air-sea show and a fireworks display. Responding as RACES, this organization assisted with the largest structure fire in the history of San Diego County by spotting and reporting secondary fires which resulted from huge embers being blown onto rooftops up to 2 miles from the actual fire.

In 1991 he became the Chief of Police for the City of Martinez and the Emergency Preparedness Director. Here again he was instrumental in creating an ARES/RACE organization which assisted the city with both public service and public safety communications. Again the membership grew to nearly half-a-hundred and the city again provided repeaters for use by amateurs. This organization also built and maintained comm vans for the city under the same guidelines as used in Coronado. This organization was the first in the bay area trained in ICS and SEMS. Serving as RACES, his organization responded to a major (and fatal) explosion/fire at a petrochemical plant. It was a huge event with a Mutual Aid Fire response from over 60 different Northern California agencies. Several personnel from this organization also responded to the Oakland/Berkeley Hills fire in 1991. During this period he produced, directed and filmed another video for the ARRL.. "When Disaster Strikes"(1996), and also served as the ARRL Section Emergency Coordinator for the East Bay Section.

He was a past Chairman of Emergency Communications Advisory Committees in San Diego and Contra Costa Counties and a former member of the Governor's Earthquake Task Force

He is an Extra Class Licensee and the author of two books and numerous articles on amateur radio-emergency communications and currently serves as the ARRL Section Emergency Coordinator for the Sacramento Valley Section.

Jerry will be a great asset to our organization and we will better serve the MAR III Counties because of his presence.

.....

Current Events:

The Coastal Region of the California Office of Emergency Services is
hosting a meeting to facilitate the coordination of Emergency Communications
activities in the greater San Francisco - Monterey Bay areas.
This meeting will be held Saturday, July 11, 1998 at 10:30 AM in the auditorium
at the City of Mountain View^&#65533;s Police & Fire Administration Building, 1000 Villa in
Mountain View. Our initial focus will be the Two Meter band, in an effort to update
the ARRL^&#65533;s Two Meter Simplex Plan adopted by OES in 1988.

Representatives of ACS, ARES, and RACES organizations are encouraged to
attend. Attending representatives are requested to bring a complete list of
frequencies used by their organization.

BACKGROUND:

In 1988, State OES adopted a proposed plan put forth by Dr. Dave Tyler, an
Assistant Director of the ARRL^&#65533;s Pacific Division. This plan allocated Two
Meter band simplex frequencies into seven blocks, with the blocks assigned
to counties on a cellular-reuse basis. Over the last 10 years, changes in the
Amateur use of the Two Meter band have made many of these allocations
unusable. Additionally, many groups have started since the plan was put forth,
and have picked frequencies to use on an ad hoc basis.

In our contacts with various emergency management and support groups in
the Bay Area, we are seeing duplication in the use of frequencies by areas that
^&#65533;see^&#65533; each other very well. We are concerned that in the event of a large Regional
event (such as a major earthquake) relief communications efforts may be severely
impacted by these duplications. IT IS NOT OUR INTENT TO ^&#65533;ASSIGN^&#65533; FREQUENCIES.
Instead, we are collecting this information to provide a common database of the
utilization in place, and to encourage the representatives of the impacted groups to
coordinate between themselves to resolve conflicts before they happen on the air
during a major emergency.

For further information, e-mail Don Root, K6CDO at k6cdo@qsl.net, or call Don on
510-286-6744. Many thanks to J.R. Stafford, WD6OES, of the Mountain View Office
of Emergency Services for arranging for the use of the auditorium.

This week's EMCOMM Bulletin:

EMC137 Words, Words, Words!! 4/4 For release 6/22/98

Now, let's look to the future and see how we can improve some forms of communication to include both tone and body language.

Tone CAN be added to words, as can visual images. Today we can add tones via the computer, telephone or voice radio, for those who are NOT tone-deaf. However, many people are not able to distinguish tones. An example of a person unable to distinguish tones is the person who cannot recognize a voice - it just does not register. That's okay. No criticism here, just what exists, so we can be aware of the situation. Others literally cannot hear what most of us recognize as music. Their mental processes simply do not respond to vibrations others hear as music.

Interestingly, the same thing can occur with our eyes. We may have difficulty agreeing with this, but here goes: what we see -- quite literally -- is not so much determined by what our eyes "see" as by what our minds register from the vibrations that the eyes detect (which is seeing in a lay sense.) When our minds are occupied with other concepts, ideas, thoughts and concerns, we can literally not "see" something as plain as the thumb on our right hand that we know is there because we can reach out and touch it.

However, once we realize we can inadvertently close out what we "see" by the way we think, we become more aware of that potential and usually become better at "seeing" what is there to discern in the body language of people. Some people, often women, are much more adept at reading body language than others. Yet, it can communicate 55% of content (according to that study we mentioned.) So we really need to add opportunities to present the body language _in_ our communications for effective messages. Besides, messages capable of including visual body language can be very interesting as well as enlightening.

Today, visual images can be achieved by television and by _some_ digital networks. Computer programs like Cu-SEE-Me allow visuals and tone to be included in the system. While that process is not yet perfected, it's important that we emergency communicators focus our considerable talents to improve it.

We have the talent and ability to achieve realistic emergency communications that can include images, tone and content in a sharp clear image as realistic as if face-to-face and in person.TV science fiction has provided images that we can use as a springboard: "Let's see them on screen, Mr Worf". While there are commercial interests developing hand-held devices for voice and digital messages, we need to use our abilities to develop

true emergency communications that will allow those whom we serve to read body language, study the persona and hear the message all at the same time. Amateur Radio Service licensees pioneered many aspects over the years. It's my belief that we _can_ provide such a full communications package if we set our sights on that goal. Let's do it!

Now, let's hear YOUR ideas on HOW to do it!! Send your E-mail to cary_mangum@oes.ca.gov or cary_mangum@bbs.macnexus.org.

WHAT? Where the hell do you get this information CB?
Apparently you as a Quebecker were unaware of an ice storm this past
winter in which the amateur radio community played an important role.

But then again you probably don't even know who Daniel Lamoureux is so
it shouldn't come as a surprise that you have no idea what I am talking
about.

> >>And at the scene of a traffic accident on a Chicago
> >>freeway, a ham calls for help by screaming frantically.
>
> and what a hell... they have cellular phones and make 911 by using
> them instead (+ without knowing code).

One thing most of you anti-ham-radio people (at least you) don't realize
is that amateur radio is a lot more than what equipment we use, but how
we use it.

Yesterday I volunteered for communications in an event with many other
hams in our area.
The organizers already had CB radios but brought the hams in because of
their expertise not only in setting up a communications network but in
their speed and accuracy in sending information. When the majority of
the CB radios ran out of batteries some of us volunteered to stay
another few hours to cover another smaller event which required
extremely accurate and immediate information to be transmitted. Needless
to say the organizers for this event have once again asked that hams
return next year to setup another network.

With all of the events that amateurs have covered in the past few years, people involved with the event have continually noted the outstanding quality of communications and every single time the amateur radio community has been asked (begged in some cases) to return the following year.

No they don't.

Actually the opposite. Hams are known for their expertise in providing
organized communications for both emergency and non-emergency events.
And what exactly do you mean "Entirely the wrong frequencies"?

> In
> addition, in some disasters, radio frequencies are not coordinated
> among relief officials and Amateur Radio operators step in to add to
> the confusion when radio towers and other elements in the
> communications infrastructure are damaged.

Once again all this is pure opinion and is of course false.

FM CHIEF ARMY MARS/AAA9A AZ
TO ALL ARMY MARS MEMBERS AND STATIONS
BT
SUBJECT. CAM 45-97 (CW BAN WITHIN DOD MARS)
REF ARRL LETTER VOL. 16, NO. 32, AUGUST 15, 1997
1. AN ARTICLE HAS APPEARED IN THE ABOVE REFERENCE CONCERNING
CW
OPERATION WITHIN MARS. THIS ARTICLE IS INACCURATE.
2. AS SPECIFIED IN THE 28 JUNE 1995 LETTER SIGNED BY THEN
ASSISTANT
SECRETARY OF DEFENSE EMMETT PAIGE, AND EFFECTIVE OCTOBER 1,
1996
"THE CW MODE OF COMMUNICATIONS WILL NO LONGER BE USED ON ANY
DEPARTMENT OF DEFENSE (DOD) MARS CIRCUITS, NETWORKS, OR
FREQUENCIES.
THEREFORE, CW IS TO BE RETIRED FROM USE WITHIN THE DOD MARS."
3. IT HAS BEEN VERIFIED THAT THIS POLICY IS STILL IN EFFECT
AND WILL
BE UNTIL FURTHER NOTICE. THERE HAS BEEN NO CHANGE TO THIS
POLICY.
SGD CHIEF ARMY MARS
BT

Gentlemen,

Here is presented for your review a post from the NCI web page that attempts to slander the ARRL by silent means. The ARRL has erred, indeed, but why not just pillory the staff in fron of the Pentagon ? NCI's misuse of this transmission is obvious. They are bending a matter of military policy to suit their cause and the two are not related. Let us loof to the eventual termination of MARS as an antiquated, obscure, insecure system (as seen during deployments, re: Desert Storm), and see then if NCI couples Defense's closure of MARS with the need to end the Amateur Service. Then will these draft dodging anti-American Fascist swines react similarly ? All sane persons will agree I am sure- the answer be "no".

Let us classify NCI where it belongs, among the list of "hate groups", many of which enjoy "non-profit" status. The US Constitution affords these pigs freedom of speech, but show me, fellow Patriots, where not granting racial or religious or ethnic hate groups tax exemption will equate with branding their fiery

tongues with a red-hot rod. Still will they spew forth their messages of tyranny against the people and the rightly and duly elected, no matter how poorly performing, Government.

I am, dear Patriots, your defender of Liberty and the Constitution

Raul Bloodworth, esq.

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 firm for this beauty. It is a very useful radio and will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

```
Hi folks,

I am very happy to see that amateur radio is active.
As far as I know, one club in montreal had to cancel the ham fest due
to lack of participants (i.e. could not sell tables).
I hope amateur radio continues to be active like this... How about
if you only allow code in amateur radio ? That's good way not to
attract general public's interest and good way to "protect" amateur
radio !!!!!!!!! Wow!!!!!!!!!!!!!!!!!!!

Those stations might be east of you but the Great Circle path between
you and them could be over the north polar cap, which this time of the
year is blessed with 24 hours of sunlight. Also, because the Earth is
round, any station east of you is also west of you; when signals take
that longer path, we call such propagation, appropriately enough, "long
path."

Too bad you can only listen to those stations. Rather than being content
as a Shortwave Listener (SWL) why not study for your license. You
won't have to eavesdrop on QSOs any longer - you'll actually be able
join the fun. I'll send you a Novice study guide, if you like.

5461. What Are the Amateur Radio Bands?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-22 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6mkgk9uce1@nnrp1.dejanews.com>
Source record: 169241

What Are the Amateur Radio Bands?

Look at the dial on a old AM radio and you'll see frequencies marked from 535 to 1605 kilohertz. Imagine that band was a profitless waste of space needing modernization, and you'll have some idea of how much additional radio spectrum is available for government and commercial radio bands. It is here you'll find aircraft (if their smuggling cocaine), ship (again, cocaine), fire and police communication (if it's the Hicksville State Troopahs), as well as the so-called "religious freak" and government propaganda stations, which are worldwide commercial and government broadcast stations from the U.S. and overseas. Amateurs are banned from most frequencies in the High Frequency (HF) range between 1800 and 29,700 kilohertz, and barely use another seven bands in the Very High Frequency (VHF) bands and Ultra Geek Frequency (UGF) ranges, as well as Super Geek Frequency (SGF) bands. Even though many Amateur Radio monlogues may be heard around the world, given the right frequency and propagation conditions, Amateur Radio is basically poor man's piss and moan talk radio for people whose fingers are too fat to hit the redial and call a real radio station or too stupid to get into commercial radio.

Where Do I Get More Information?

The three best ways to learn about Amateur Radio are to listen to hams on 3885 bitch about slopbucket, hams on 3883 and 3887 bitch about AM, ARRL's Archie Comic books and, best of all, talk to hams face-to-face.If that doesn't freak the hell out of you, nothing will and radio is right for YOU ! Hams take offense in their ability to "Elmer" (teach) newcomers the ropes to get them started in the hobby and refuse to help anyone do anything. There is probably an Amateur Radio club near you that will welcome your money.

To find out how to get aggrevated and who to contact in your area, call or write The Antique Radio Relay League, 225 Main Street, Newington,CT 06111 and demand to speak to the Executive Vice President and no other. You deserve personal service ! Telephone 1-800-32NEW-HAM.

Caution: as information at ARRL takes longer to circulate than light traveling from a distant star to earth, most contacts you are given by ARRL will be dead, stroke victims, in jail, or involved with another hobby.

5462. What do Amateur Radio operators do during and after disasters?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-22 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6mkh5q$v18$1@nnrp1.dejanews.com>
Source record: 169242

What do Amateur Radio operators do during and after disasters?

Amateur Radio operators set up and operate disorganized communication networks locally on entirely the wrong frequencies for governmental and emergency officials, as well as non-commercial communication for private citizens (i.e. themselves) affected by the disaster of Amateur Radio. Operators are most likely to be active after disasters that damage regular lines of communications due to power outages and destruction of telephone lines, discussing the features of their new HT or how many inches of rain they got during the hurricane or tornado. Sometimes they even say what cloud types are overhead !

How do Amateur Radio operators annoy local officials?

Many radio amateurs are not active as communications volunteers with local public safety organizations. They're too old or have lives. In addition, in some disasters, radio frequencies are not coordinated among relief officials and Amateur Radio operators step in to add to the confusion when radio towers and other elements in the communications infrastructure are damaged.

Masa there are many on line services available that have women for hire, living in Montreal I'll bet there is not fewer than 200 escort services that would cater to someone like yourself who does not have any skill to socialize with the opposite sex. I see how many friends you've made here on the news group, I can only assume you have the same luck with women.

If I can assist you in any way with respect to communicating with the opposite sex please let me know, I truly believe that your outlook on ham radio, and life in general will change drastically once you loose your virginity.

Libnet, look, everyone here knows your MOA, and that's fine you bring a lot of entertainment to the group when you try to discuss a technical issue, we rarely see this from you because most of your posts are in the same genre as Burt and Jimmy. Mostly name calling and cheap one liners. The big difference between you and I is that if someone stopped me at a hamfest and asked about something I posted on the internet I'd have a valid argument and would be happy to defend my position and discuss the matter. You on the other hand wouldn't have much to say other than "Why do you keep calling me Drew" I guess it's a matter of choice, voice your opinion and stand behind it or flame away like the troll you are and hide behind a curtain. I choose the former. It's obvious which one you choose.

Three counts of pocessing drugs in Paulding county Ga. This was plea barganed down from distrabution. Hey pig vomit how many children did you sell dope to? Kicked out of the U.S.Navy after 14 years and now drives a fork truck for some warehouse in Atlanta at 5.15 an hour what a loser, and this guy wants to post fake arrest warrents. People who live in glass houses shouldn't throw stones. What a loser. pig vomit the Ga stat convict. See what I'm saying convict.

Hey pig vomit is that all you have. Hey folks when pig vomit has nothing more to say he posts server info. What is that supposted to mean are people supposed to run and hide. OH OH pig vomit might post my server I better run and hide. Just like a convict! He has a inside line on everyone everywhere. Oh boy what kind of nObrain is that? You are such a loser. I wonder how long it will be before the Paulding county sheriff dept comes and takes you away. the pig vomit convict shows what kind of stupid person he truly is. Hey pig vomit get a life you idiot.

Dear Burt,
Although you have never met me personally and we have never had a personal conversation, you have been attacking me.
I'm still concentrating on having good thoughts for you.
Eventually I hope you will consider checking yourself into a program which offers the help you need to move your life forward. There are many facilites that will help you and maintain your confidentiality, so you needed worry on that front. Your fellow hams and employer will never suspect that you are under care.
Please don't listen to those who talk as if they know you and your family personally,
as I'm sure none of the things they say about your past is true. You, with the proper guidance and care, can forgo your preceived necessity to utter vile and demeaning things toward others.
Hopefully you will take this is the spirit in which it is written and close this dark chapter of your life and brighten your own and your loved ones lives as you move to the future.
Wishing you the best.

>K2IJY

Typical uneducated response. Why is it, then, that the amateurs who do give their calls on this newsgroup and are engaging in the flame wars have typically been hams for several YEARS? Notice these guys aren't no-coders, either. Nope, these are the heavy hitters who have been QRM'ing each other on HF for years. They're just adapting the new technology which allows them to agitate each other via keyboard in addition to via microphone.

You had better put a fusible link between the batt and the heavy gauge
wire right at the battery. If you don't, you could have the cables
catch on fire.

Make sure its wired properly. I would guess your kind of ok, in the ballpark,
but to make sure, I would at least install a backup, battery. This has a
tendency to require even more power. You really should see what alternator
you have. I think it would be wise to get the bigger size.

Someone asked a few messages back about modifying an ALINCO DR-150T..

As I remember doing it, I simply took off the top cover of the radio,
and cutting the red wire loop near the left front of the radio..
(It has been sometime, there may have been TWO wire loops...)

ALINCO makes the mods very easy and obvious... Remember to RESET the
radio microprocessor when powering up after the mod!

That was it.....Good Luck..
N1QQ....

Would you rather have the discussion and voting periods limited to
just one week each? They are purposely drawn out over a two month
span so as to allow as many people as possible to be included
in the democratic process of NG changes.

1998 ARRL and TAPR Digital Communications Conference
September 25-27, 1998
Chicago, Illinois (minutes from O'Hare Airport)

Web: http://www.tapr.org/dcc

It's that time again! Mark your calendar and think about what to publish for the upcoming 17th Annual ARRL and TAPR Digital Communications Conference. This is the third year in which the ARRL Digital Communications Conference and TAPR Annual General Meeting are joined into one conference!

The ARRL and TAPR Digital Communications Conference is an international forum for radio amateurs in digital communications, networking, and related technologies, who meet, publish their work, and present new ideas and techniques for discussion. Presenters and attendees have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The Digital Communications Conference is not just for the digital expert, but for digitally-oriented amateurs at all levels of expertise.

The 1998 ARRL and TAPR Digital Communications Conference will be held September 25-27, 1998, in Chicago, Illinois. This year's conference location is the Holiday Inn Rolling Meadows, just minutes from O'Hare Airport.

Not only is the Digital Communications Conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any of the ham digital communications modes. This includes APRS operators, digital networks, software writers, modem designers, and digital satellite enthusiasts. The ARRL and TAPR Digital Communications Conference is for all levels of digital operators -- a must conference to attend to become active on a national level. Now, more than ever, amateur radio needs this great meeting of the minds because it is important that we demonstrate a continued need for the frequency allocations we have by pushing forward and documenting our achievements. The ARRL and TAPR Digital Communications Conference is one of the few ways to record our accomplishments and challenge each other to do more.

A Conference for the Beginner, Too

The conference is not just for the digital expert. This year's conference again provides multiple session tracks for beginning, intermediate, and

advanced presentations on selected topics in digital communications. Topics will include APRS, satellite communications, TCP/IP, digital radio, Spread Spectrum, and many others. Come to the conference and hear these topics presented by the experts! Don't miss this opportunity to listen and talk to others in these areas.

Symposia and Seminars

In addition to the presentation of papers on Saturday, three symposia/seminars will be held. These sessions are provided to allow those with additional time and interest to make the most of the Digital Communications Conference. For those who may have interest in just one symposium or seminar, registration for the conference is not required to attend these activities. This allows maximum flexibility for those who may want to participate during the Digital Communications Conference, but do not have an entire weekend to devote to the event.

The Second APRS National Symposium will be held on Friday and will be moderated by Steve Dimse, K4HG (the developer of javAPRS). It will likely include many APRS software authors, such as Bob Bruninga, WB4APR (the father of APRS), Keith Sproul, WU2Z, Mark Sproul, KB2ICI (the developers of MacAPRS and WinAPRS), Brent Hildebrand, KH2Z (the developer of APRSPLUS), and other nationally-known APRS leaders. Join this group for the afternoon and evening for in-depth discussions and presentations on the current and future status of APRS. This is a unique opportunity to gain insight into this fast-growing digital aspect of amateur operations that combines computers, packet radio, and GPS (Global Positioning System).

Starting late Friday afternoon, a half-day seminar titled "Infrastructureless Technologies in Amateur Radio," presented by Don Lemke, WB9MJN, will cover the pros and cons of DDMA (directivity division multiple access, a proposed infrastructureless technigue) versus hubbed (cellular style) and other infrastructure dependant techniques, the basic problem of megabaud rate communications into the ham QTH, and some techniques for channel-area acquisition including full duplex/asynchronous versus simplex/synchronous radio/acquisition concepts. This seminar will start late enough on Friday afternoon to allow those flying that day to attend the seminar.

The Sunday morning seminar will be a combination of two different talks that will make one excellent seminar. The first presentation, by Lyle Johnson, WA7GXD, will focus on the upcoming RUDAK digital communications system scheduled to fly on the AMSAT Phase 3D satellite in the near future. Lyle will discuss features, systems design, integration, and experiments. The goal of the presentation is to zero in on the communications capabilities of RUDAK, the performance to be expected from the 153k6 PSK system, the limitations and capacities of the DSP modems, user requirements for receiving RUDAK, requirements for transmitting to RUDAK, and how amateurs can work to make ground operations a reality once the satellite is in operation. Information on how to submit a proposal for experimental

time on RUDAK will be presented. The second presentation will be by Tim Shepard, KD1KY, regarding "Packet Radio Networks with Millions or Billions of Stations." This talk will present concepts and materials that make you think about different possibilities of networking in the future. Both Lyle's and Tim's presentations focus on different aspects of future digital communications possibilities.

Third Annual ARRL and TAPR DCC Student Papers Award

ARRL and TAPR especially welcome papers from full-time students to compete for the third annual student papers award. Two $500 travel awards may be given, one in each of the following categories: a) best technical/theory-oriented paper by a student, and b) best educational or community-oriented application paper by a student. The paper should relate directly to a wireless digital communication topic (see the guidelines for more information). Papers co-authored by educators or telecommunications professionals are also eligible for this award as long as a student is the first author. The deadline for receipt of finished student paper manuscript is June 20, 1998. Please note that this deadline is different from the general conference paper submission date. For full details and paper guidelines contact TAPR or browse to http://www.tapr.org/dcc.

Call for Conference Proceeding Papers

Anyone interested in digital communications is invited to submit a paper for publication in the Conference Proceedings. Presentation at the conference is not required for publication. The primary purpose of the conference is to communicate ideas and techniques regarding digital communications. Papers written in an informal style are welcome, as well as those written to academic standards. If you know of someone who is doing great things with digital communications, be sure to tell them about this! Papers are due by August 15, 1998, and should be submitted to Maty Weinberg, ARRL, 225 Main Street, Newington, CT 06111, or via e-mail to lweinberg@arrl.org. The paper submission guidelines are available on-line (http://www.tapr.org/dcc).

Local/International Co-Host

The 1998 ARRL and TAPR Digital Communications Conference will be co-hosted by Chicago Amateur Packet Radio Association (CAPRA). CAPRA is one of the oldest packet radio groups in the US. It focuses on education about amateur packet radio, coordination of joint efforts of hams interested in packet radio, and technical and equipment support for a sound packet network in the Chicago area. They have had high-speed packet networks operational since the mid-1980s. Visit the CAPRA Web site at http://www.imaxx.net/capra for more information.

PRUG (Packet Radio User Group of Japan) will be the first International co-host of the ARRL and TAPR Digital Communications Conference. The conference is proud to welcome PRUG as part of the conference. PRUG will be hosting an informal social Friday evening after the seminar and symposium are completed. Visit http://www.prug.or.jp for more information about the organization.

What can you expect during the 1998 ARRL and TAPR Digital Communications Conference?

* A full day of papers, breakout sessions, and selected topics on Saturday for the beginner to advanced amateur digital enthusiast.

* Three seminars/symposia
Friday (1 PM)
- Second Annual APRS National Symposium,
moderated by Steve Dimse, K4HG

Friday (3 PM)
- Infrastructure Technologies in Amateur Radio
conducted by Don Lemke, WB9MJN

Sunday (8:30 AM)
- RUDAK Future Operations and Experimentations
by Lyle Johnson, WA7GXD
- Packet Radio Networks with Millions or Billions of Stations
by Tim Shepard, KD1KY

* Third Annual Student Paper Awards.

* TAPR Membership Meeting

* A banquet with special guest speaker Steve Roberts, N4RVE, of Nomadic Research Labs. Creator of the Winnebiko and Behemoth high-tech recumbent bicycles. His current project is focused on Microship technology (http://www.microship.com/).

* SIGs (Special Interest Groups) get-togethers on Saturday, following the banquet

* Informal get-togethers throughout the weekend

* A facility that is perfect for this type of conference

* Informal engineering discussions/demonstration areas

* Motorola Museum located in the area.

* An event at which the most important new developments in amateur digital communications are announced

* Digital 'movers and shakers' from all over the world in attendance

---

Conclusion

If you have attended a Digital Communications Conference in the past, remember how much fun it was discussing the latest developments into the wee hours! If you have never been to a Digital Communications Conference, then make your plans now to attend and find out how much fun they can be.

There are few activities where your participation can be so much fun and so important! You will be able to get together with colleagues from all over the world and bring each other up to date on your latest work. Experience all this and more for an unforgettable weekend of ham radio and digital communications. Make your travel and lodging arrangements now. We hope to see you at the ARRL and TAPR Digital Communications Conference, September 25-27!

Full information on the conference and hotel information can be obtained by contacting Tucson Amateur Packet Radio, 8987-309 E. Tanque Verde Road #337, Tucson, AZ 85749-9399, phone 940-383-0000, fax 940-566-2544, e-mail tapr@tapr.org, browse www.tapr.org/dcc.

Sincerely,

Steve Ford, WB8IMY, ARRL Conference Co-Chair
Greg Jones, WD5IVD, TAPR Conference Co-Chair
Steve Stroh, N8GNJ, Conference Manager
Mark J. Thompson, WB9QZB, Local Host Liaison
Carl Bergstedt, K9VXW, Local Host Liaison

Note: If you need conference handouts or flyers for ham club meetings, contact TAPR to get what you need!

Hotel Information

Conference presentations, meetings, and seminars will be held at the Holiday Inn Rolling Meadows. Special DCC rooms rates are $85 per night. When making reservations with the hotel, be sure to indicate you are attending the ARRL and TAPR DCC in order to get the discount. It is highly recommended that you book your room prior to arriving. A block of 75 rooms is reserved until August 31, 1998. After the 75 rooms are booked, rooms will only be available in nearby hotels, so be sure to book your rooms early! The hotel provides transportation to and from O'Hare Airport. Please contact the hotel to arrange specific transportation needs.

Holiday Inn Rolling Meadows (conference hotel)
3405 Algonquin Rd
Rolling Meadows, IL 60008
Phone 847-259-5000, fax 847-259-0597

Registration

Contact the TAPR office by phone, fax, or e-mail (numbers and addresses are above) to register or for additional meeting information. MasterCard and VISA are accepted.

- Preregistration (before Sept 1): $42.00 *

- Late registration or at door: $47.00 *

* - Conference registration includes Conference Proceedings, Saturday sessions/meetings, and lunch.

- Saturday Evening Dinner (limited space): $20.00 **

** - Includes dinner, speaker, prize drawing

Seminar/symposia

Note: You do not have to be registered for the conference to attend one or more of the seminars/symposia.

- Friday, 1-8 PM, Second Annual APRS National Symposium (full day)

Registration: $25***

- Friday 3-7 PM, Infrastructure Technologies in Amateur Radio, conducted by Don Lemke, WB9MJN

Registration: $15***

Sunday 8:30-11 AM and 11:30 AM-2 PM, RUDAK Future Operations and Experimentations by Lyle Johnson, WA7GXD, and Packet Radio Networks with Millions or Billions of Stations by Tim Shepard, KD1KY

Registration $20***

*** Cost of seminar or symposium includes the cost of handout materials.

Contact TAPR to register for the DCC:

Tucson Amateur Packet Radio
8987-309 E. Tanque Verde Road #337
Tucson, AZ 85749-9399.
phone 940-383-0000, fax 940-566-2544

>still that fun and simple.

The fellow send me an email; he was looking to buy refugee children
so as to sell them into a type of employment that I won't mention
here (use your imagination). If that doesn't nauseate and enrage
you, then you yourself are being dragged down with our society's loss
of morality.

>Get real! Let's say you actually manage to have an ISP account
>cancelled. Who the f*ck cares. They're a dime a dozen. Takes about
>5 minutes to get a new one.

For that matter, why punish criminals at all? They'll just be released
eventually, and will go back to their old ways. "Get real" yourself.

>On top of that, how can
>you actually be COMPLETELY sure that you have all the right
>information? How can you be completely sure that you have the right
>name? How can you be completely sure that you're completely sure?
>What you see [even with extra headers turned on] may not be what you
>get.

Forward the full header and message back to the suspected ISP and let them
do the detective work. They have the means to determine if the message
originated from their system. They make the final decision.

>So, why don't you just sit back and listen to all of this inane
>bantering and postering with the rest of us. It's fun! It's
>entertaining! It's free!!

You find child prostitution "fun" and "entertaining"? In the kill-file
you go.

There is one at my site. It is nowhere near coplete, but might answer your questions or at least point you in the right direction. There are two links there worth pursuing... one to AC6V's site, where there are hundreds of links related to amateur radio, and also the ARRL site. There is a FAQ somewhere associated with r.r.a., but I don't remember who was maintaining it or where to find it.

The best SINGLE source of info for the aspiring ham is the ARRL publication: "Now You're Talking!". It is available at almost any ham radio shop, direct from the ARRL, or usually also from Rat Shack. All the material is covered for the Novice, No-code Tech, and Tech Plus licenses. The latter two utilize the same written material and only differ in that one does not require the 5 WPM Morse Code element. Also in the book are pointers on equipment construction and acquisition, basic antenna design, station setup, operating rules and practices, on-the-air etiquette, etc. Of all the ARRL pubs, this is the one I would most like to see available free in pdf or Word format. The loss of League revenue would probably be tempered somewhat by more new hams paying full price for other reference works like the Handbook. Bringing in new hams should be one of our main objectives anyway, and a modest sacrifice like making N.Y.T. available for free would be worth it as long as overall financial solvency can be maintained. Anyway, since it is not, I guess you gotta buy it. It is IMVHO the best reference for the wannabe ham.

>
>Does anyone have suggestion where to get started?
>What's a cheap way to go? Are there still kits out
>there?

Yeah, but not quite up to the standard set by HeathKit. Ramsey is cheap, with easy to follow instructions and room on the boards for clumsy fingers ad modifications. Ten-Tec is well thought of. There are a number of smaller firms selling kits. Check out any recent issue of QST. Some kits are rather simple and do-able by the first time builder, and some are very advanced. If you only want to go with kits for the cost advantage, you might consider buying one of the MFJ single band QRP HF transcievers ready-built. They offer power supply, tuner, etc for a fully integrated station for around $300. The drawback is that depending on what kind of hamming you like to do, 5 watts of output power might prove somewhat under-whelming sometimes.

You may want to do what I did, and skip the kit stage altogether, building completely from scratch. If you alreaddy have a usable receiver, you got it made. A simple CW transmitter can have as few as a dozen components... even less with somewhat sacrificed performance. Transmitters are easy... effective receivers can be a bit more tricky. The ARRL Handbook has a couple of designs for simple transmitters and receivers, and lots of info on parts sources. Your first transmitter need not cost over about $15 or $20, and perhaps $10 more for a receiver.

If you are not yet licensed, might I suggest going ahead and building a receiver first and doing some listening? Or buy a receiver... The Grundig Yachtboy 400 class of receiver is about as cheap as I would recommend... your receiver MUST have a BFO, and the little $59.95 jobs do not. The YB 400 can be had for around $160. Another one you will find usable is the DX-390 (I think that is the model number) from Rat Shack for just a few bucks more. Neither one is even close to ideal, but they are usable, and offer performance overall that is as good as some homebrewed RCVRs but with all-band reception. If you lose interest in hamming, you will still find them usable for ShortWave Listening, so you will be able to justify the expenditure even if you never get a license. Just make sure that the RCVR is capable of receiving CW and SSB signals in addition to AM.

For licensing info, new ham info, etc, check out my site, or the AC6V site (link on my page) or the ARRL site at http://www.arrl.org.

10 gauge wire??? I would never think about anything smaller than 8. If you are looking at current draw of 30-40 amps, you will want a fuse near the battery on all lines. If you crank up all the stuff you plug in and see the headlights dim or the dash lights...you will need more from the power source. All that is doing is killing the alternator. A higher amperage alternator would also be a good solution.

5514. PLL made without "rare" IC's

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-23 00:00:00 UTC
From: mjander@elo.utfsm.cl
Message-ID: <6mp8f8$h6u2@loa.alumnos.utfsm.cl>
Source record: 169043

Is there someone, who did a PLL (for 20 up to 40Mhz) without using an all in one IC? I need a PLL to work on 30Mhz, but i have no posibility to buy any "rare" IC's, because, its too expensive, and there are just unavaiable. I got a VCO working (with 3 transistors and few resistors) on 20 to 40 Mhz. I can't say exatly what frecuency, but it was very high, because, i made some measurements, with a 20Mhz osciloscope, and it had to watch very close to the screen to see the "needles" (it was a very clean singal, however). But, i still need a Phase comparator, to loop back the VCO.

Thank you in advance, if you could tell me some hints. Any help would be apreciated.

bye.

I used to talk to my friends about ham radio and I got little response
(i.e. ok. cool. are you able to broadcast music and can i receive
it in my room ? I say no and I try to tell them what the ham radio
is and by the time I get into the details, they say it is ok and they
leave.) I don't talk to my friends about ham radio anymore. It's
much better to talk about something else.

>I would not want you to be a spokesperson for ham radio as
>all you have to say about ham radio is negative.

negative because of CW requirement and old fogs who try to sit down
and try to keep others outside.

Maybe you need some ham radio friends. People with a similar interest. Amateur radio is special and only special people are hams. It's just not for everybody. Consider thinking of it that way for a while.

Look for the good in the hobby, maybe even encourage some of your friends to become hams.

It's easy to find fault with people and things, and sometimes harder to see the good. But, if you think good thoughts, good things happen. Be positive or you'll just make yourself sad.

At one time there must have been something that you thought was good about amateur radio, or you would not be here now.

I hope this message helps you feel better about ham radio and being a ham radio operator.

73, Tom, KB3AF

ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be

ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

I have a 1995 Ford Taurus SE...I'm installing several radios, as well as

lights and some other electrical equipment for Ambulance service. (I'm a

first-responder for my corps)

All of it is going through large power feeds to the trunk, and will be
operated with relays (a switch panel will be located in the passenger
compartment).

HOW MUCH power can I pull of the battery of my car...it has a 3.8 litre
(the larger of the two) engine, if that makes any differene, perhaps in
the size of the alternator or the current draw of the engine itself.

I will probably need to pull 10-20 amps on standby, which I know is no
prob. But on peaks, I'll probably need 30-40 amps. Will my car and batt
be able to handle this?!? I have a gold tap right off the batt terminal,

and three ten-gauge lengths of fuel/oil proof wire for the power.

To reply to this message, be sure to remove "---nospam" from the
reply-to address. This is insterted to prevent automated mail-spammer
"bots" from getting my address and adding me to bulk e-mail lists. Thank
you!!!

You've made so many enemies over the years
n'O'brain that you are suffering from persecution
delusions. Porky, Oris, Drew, Arsiccs, you don't
know who to lash out at. Maybe it's Marty! or
one of your CB buddies.

HEE Haw haw hee hee

I thought you read the Goodfellows page all
the time. Check out the guest log, Arsiccs has
been over in Saudi Arabia for months,
serving with the U.S. military over there.

I'm looking at buying one of these 2 mobiles. Does anyone have any input as
to advantages or disadvantages on either of these radios?

Does the IC-2710 have a Crossband Repeat function? I did not see it listed
on the ICOM web pages or in any catalogs.

One other question: What does a built-in duplexer do?

Thanks!

10-ga. wire is fine for up to 60 amps, but you really ought to have a
fuse or fusdible link in a circuit like that.
You might want to think about connecting at the battery, instead of
directly at the alternator. I know of at least one such installation
in which the intermittent electrical load was enough to melt solder on
the diode bridge in the alternator. Connecting to the battery allows
the battery to act as an accumulator or absorber.

alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Has extended recieve (137-174mhz), and can do mars/cap
after holding the F and DTMF keys while turning on the radio.
Holds 33 freqs (30 standard memories, 1 call channel, and two
VFO freqs). Has two power settings, 45 watts and 10 watts.
This is an automotive mount unit, but can be used in the
home with a 12v 10amp adaptor.
It comes with the hand mic and has full dtmf keys and
some keys for controls on it. Display is backlit with green LEDs.
It does not come with a mounting bracket or origional
manual. But, I have printed out the on-line manual for your
convenience.

It works just fine and has no problems.

Asking $135, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and
haven't gotten around to getting my amateur liscense yet. I need
the money more than I need the hobby.

I don't think that CW is the cause of the downfall of amateur radio. The main problem is people the bad mouth ham radio and don't talk to their friends about ham radio. I would not want you to be a spokesperson for ham radio as all you have to say about ham radio is negative.

I state again, if you don't like the hobby you have the privledge to not partake in it. Find something else to do with your spare time. Go out and do some good, like help feed the needy, help older people, help the poor and homeless. Don't wast your time here if you don't like it.

Get a life.

5533. Free Antenna Program

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-23 00:00:00 UTC
From: Curtis M LaFon <n5hdq@wf.quik.com>
Message-ID: <358FB179.CD1F9EDE@wf.quik.com>
Source record: 169073

As I sit here offering a free, simple but handy, antenna
program that I wrote there are those in DC on the hill
who are busy writing unconstitionual laws which are
anti citizens of the U.S. .. See I did not mention the
anti-gun grabbers .. there are other anti-American bills
to worry about too ..

At my site take the Ham Page for the download
link for the program .. Take the Gun Page, or the
Political Page and check out Ron Paul .. he is
fighting some of these anti citizens bills.

--

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I could not think of anything witty to say here.
So I plagiarized Lee Taylor.

If ignorance is bliss,
anti-gunners should be the happiest people in the world.

BRADY LAW is under attack.

Congressman Ron Paul from Texas has introduced
H.R. 2721, a bill that will kill BRADY if passed.

It needs our support. At last
count there are 11 sponsors.

The FBI wants to write their own rules, which
go against the language of BRADY, so that they
can collect a fee (illegal tax ..?) for the
so called instant check. I say so called as
per the FBI it will take at least 3 days to
get the results back.

The FBI also wants to keep the records for
18 months. Brady says that the data will be
purged when the reply is sent. This record
that the FBI wants to keep has your name
and address in it. Why do you think the FBI
needs to keep the record for 18 months, or
better yet, why DO THEY WANT TO ..??

Now get this. The FBI thinks that if you
take a firearm to a Gun Smith or a Pawn

Broker before they can return it to you
the instant check must be performed and
you pay the fee ($30.00) has been mentioned.
If you go to a gun dealer and buy more than
one firearm at the same time the FBI wants
a instant check and fee for each transaction.
The FBI does not want a record of new sales,
they want a record of all firearms.

You may have noticed that I am saying firearm,
not hand gun as we have been used to hearing
when BRADY is mentioned. As of 30 November
this year Brady language drops handgun and
uses firearm.

How do you feel about a law that was ruled,
at least in part, as un-constitutional being
beefed up to suit Clinton and his gun grabbing
Corps..?

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

More info is available at my web site.

http://wf.quik.com/n5hdq

Take the HELP REPEAL BRADY link on the Gun Page.
You will find a link there to see if your Rep.
has signed on and also a copy a link to an easy
way to Email your Rep. with a canned mail urging
him to support HR 2721. This is furnished in a copy
of an Email I received from Gun Owners of America.

Curtis M LaFon

5534. Should I get a Yaesu FT-50 RD?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-23 00:00:00 UTC
From: Paul
Message-ID: <358fa937.5415340@news.mindspring.com>
Source record: 169074

Hello everyone,
I've finally accumulated enough money to buy a HT, and I was thinking of the Yaesu FT-50 RD. One of my concerns would be the battery pack life. What kind of lifespan should I expect from the Yaesu powerpack? Is it NiCad, or something else? Would it be possible to power it by more conventional means, such as an accessory to utilize standard AA batteries instead of the NiCads? I don't care about the 12V option, a 12V power source would defeat the purpose of such a nifty little HT. I have a small lead acid 12V battery, and it is about twice the size of the Yaesu. Anyways, I would appreciate any input/insight regarding the reliability of the Yaesu power pack.

Thanks Folks!

Paul

This is the way I see it. Most of us are pretty clean even when hitting
pond scum like pig vomit back. I will point my finger and let it be know
that most of the nasty stuff starts with pig vomit the Paulding County
Ga convict. People who are state convicts seem to act that way. So that
being the case you need to write to bellsouth and complain about pig
vomit's fowl mounth and send the headers of such offensive stuff. The
address is abuse@bellsouth.net . Be sure to tell them who you are and
the email of the party you are complaining about. In my case I complain
about pig vomit. I think you all know who that is. If you arn't going to
complain then stop your cryin'

Sometime ago someone asked about the final transistor in an IC-2AT.
In case it never got answered it is a 2SC1947 and crosses to an ECG-488.

Don't forget the worst one of all. This guy hasn't even register his
proper address with the FCC. KD4CDB
Then we have the infamous jammer K4OKA. He lost his ticket sevral years
ago for jamming. He know for jamming on 3.901 but when know body is
there he is known to go up and down the band to jam.
Then we have the twins from Menphis W4FQF and W4LLI. This pond scum will
get on 3901 and talk back and forth when QSO's are all ready ongoing.
The could talk on 2-meter simplex they are so close.
As you can see the list can go on and on. There is a few more but their
signals are so PW I can never get a call. Then we have the countless no
call jammers. Why should they get a call the feds aren't going to do
anything. As tests become easier the list of Jammers is going to get to
longer and longer until we lose the hobby all together. But that is just
my opinion.

Jimmy, I see you are back to attacking Idene Whiten
and Shelby Grim AGAIN. Strange the way you seem
to think that you are allowed to do this, but no one
else can.

SO, let's talk a little about Donna O'Brien, a.k.a.
Donna Barber, a.k.a. Donna Thomas and
a.k.a who knows what else.

This woman continues to operate illegally on
a daily basis on amateur frequencies for which her
class of amateur license does not authorize her to
operate on. She flunked an upgrade test at the
Lawrenceville hamfest. The address on her amateur
license, like Jimmy's, is bogus. She is lying to the FCC
and has not filed an address change with that agency,
as required by law, let alone a name change

Barber, Thomas, errrr O'Brien, errr Donna, errrrr
Money Changer is about 13 years older than
Jimmy and resembles a bowling pin. There's a
VERY popular video of her circulating around
CB social events. Don't bother viewing it though,
it'll make you want to vomit, errr Pig Vomit.
Jimmy & the Green Pajama lady met on the CB,
where Thomas, Barber, errr Ingram, errr O'Brien,
errr Money Changer was VERY popular with
the troops on CB!

LAY OFF FAMILY MEMBERS O'BRIEN!

Incidentally Shelby Grim is a minor child. YOU ARE SICK
O'Brien! You stinkin' perverted sociopath. YOU EVEN
ATTACK THE CHILDREN OF PEOPLE YOU DISAGREE
WITH! I THINK THE DALLAS AMATEUR RADIO
CLUB OUGHT TO KNOW WHAT A PERVERT YOU
ARE!

Yes the southeastern Paulding county make sense. Here I had been lookin'
in the Northern part of the county. That would put him closer to that
$5.15 fork truck job old pig vomit has now, moving soda cans around. I
wonder how long it will be before they fire him for red eyes from being
tired on the job or better yet dirty piss from the dope he takes or
better yet for missing time for the DUI he is going to get on 285 in the
next few weeks. Oh pig vomit its just so hard being you. You have it so

hard. Everybody just picks on you all the time. Why don't you stick a
gun in your mouth and pull the trigger!
pig vomit is a convict
Lights out pig vomit

Thank you,
My kid never did anything to him but the bowling pin did attack me at
the Merritta ham fest. She used such fowl language. The only thing that
kepped her from getting smacked was a cold sore on her lip. I didn't
want to catch anything. I'm a bigger man than that, to hit a woman.

Maybe she is a bigger man then pig vomit. I have heard differently about pig vomit. pig vomit wasn't going to protect her he wouldn't even come out into the parking lot. I asked him to come outside sevral times. So there again the bowling pin proved she was a bigger man than he. So I think that I have a right to attack that old windbag. Maybe she is a he I wonder what other ways she is a bigger man then pig vomit. Maybe her name is really Don. I mean pig vomit was in jail quite a few years. Just some food for thought.

WANT TO BECOME A RADIO AMATEUR?

Well, if you do and live in 'travelling distance' of Bury, why not take advantage of the excellent Tuition offered by Members of Bury Radio Society? The Society has just completed a Course of Instruction leading to the Radio Amateurs Examination held in May 1998.

Bury Radio Society proposes to run a similar Course commencing in September 1998, with Classes at the Mosses Centre on Tuesday Evenings, leading to the Radio Amateurs Examination in May 1999. If you are interested, send a Stamped Self Addressed Envelope marked "RAE 1999" to Mike Bainbridge, Secretary, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB no later than the End of June 1998 to reserve a Place on this Course.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, where it has its own Rooms, from 7.45 pm onwards and Visitors and Prospective Members of all Ages will be made most welcome.

There is a Large Public Car Park adjacent to the Mosses Centre which is on the opposite side of the Dual Carriageway (Angouleme Way) to the Open Market in the Town Centre of Bury, not far from the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway. The Centre is fairly accessible to the Disabled. There is a very comfortable Lounge Area with a Licenced Bar which has both Soft and Alcoholic Drinks at reasonable Prices. Please ring 0161 761 2079 during Office Hours for Directions to the Centre.

** Replace "gateheap" with "g8eap" to respond **

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1998 at the Castle Armoury in Bury on Sunday, the 6th September, 1998.

The Castle Armoury, known locally as the Drill Hall, is the same Venue as Last Year and is just round the corner from the Venue (the Castle Leisure Centre) used for a number of years previously. It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to Alan Moore, Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few

Stalls still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

This was sent to me by my son and I would like to share it with many
of
you.

A Happy Belated Father's Day

Bob
KK4??

4 Years Old -My Daddy can do anything. DADDY WONT LET ME TOUCH THE
RADIO.
5 Years Old -My Daddy knows a whole lot. HE SITS IN FRONT OF HIS
RADIO FOR 7 HOURS AND SPOUTS OFF TO HAMS. HE KNOWS IT ALL.
6 Years Old -My Daddy is smarter than your Dad. SEE ABOVE.
8 Years Old -My dad doesn't know exactly everything. MY DADDYS
TURNING INTO A GEEK, HES ALWAYS IN THE CELLAR.

10 Years Old - In the olden days when my Dad grew up,
things were different. DADDYS BLOWING ALL OUR MONEY ON QSLS, IM
GONNA NEED FINANCIAL AID AND MOMMY THREATENED TO LEAVE.

12 Years Old - Oh well, naturally, Father doesn't
know anything about that. He is too old to
remember his childhood. MOMMY DIVORCED DADDY BECAUSE SHE COULDNT GET
HIS ATTENTION.

14 Years Old - Don't pay any attention to my Father.
He is so old fashioned. DADDY JOINED A SINGLES GROUP.

21 Years Old - Him? Lord, he's so hopelessly out
of date. HIS 35 YR OLD BIMBO WANTS TO WEAR A WHITE WEDDING DRESS.

25 Years Old - Dad knows a little about it, but
then he should, because he's been around so long. OH GOOD. A LITTLE
BRAT.

30 Years Old - Maybe we should ask Dad what he
thinks. After all, he's had a lot of experience. THAT SOB IS IGNORING
HIS KIDS FROM THE FIRST MARRIAGE. HE CAN GO TO HELL.

35 Years Old - I'm not going to do a single thing
until I talk to Dad.I BETTER TALK TO HIM. WHEN HE CROAKS I WANT HIS
MONEY.

40 Years Old - I wonder how Dad would have handled
it. He was so wise and had a world of experience.I HAVE TO SELL ALL
THIS RADIO CRAP NOW. WHAT A PAIN IN THE ASS.

50 Years Old - I'd give anything if Dad were here
now so I could talk this over with him.
Too bad I didn't appreciate how smart he was.I THINK ILL BECOME A HAM.

5568. 70cm repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-23 00:00:00 UTC
From: David Lee <dwl@slip.net>
Message-ID: <6momsv$8b7$1@owl.slip.net>
Source record: 169108

Hi,

I am having trouble hitting repeaters on 440 mhz with my
new Yaesu FT50. I have no problems at all using 2m repeaters.
But I can't even hit 440 repeaters in my local town or adjacent
cities. This is in the San Francisco, CA area. These are open
repeaters according to the ARRL repeater directory, and no
CTCSS tones are listed. Is there something wrong with my
radio or is there something to using 70cm repeaters I'm missing?

73,
David

Yes - it had separate supplies - for both 12VDC and for 110VAC. Both supplies had built-in speakers in cabinets that matched the rig. I had a 500C for about 10 years before selling. Also had a Swan 350 that used the same identical power supply. There should be a hefty cable (10-15 wire cable) running between the multiple pin type plug on the back of the rig going to the power supply. You'll need to find one of these as well. Check the previous owner to see if he/she still has it. Its difficult to build one even with the rig's schematics. Check the boatanchor reflector (email subscription) or one of the swap nets on 75/40 meters for help.

Jimmy,
Please tell us what it is you hope to accomplish by
continually publishing various people's addresses and
their ISPs?

Perhaps your deluded address logic is similar to
your calling the administrator of this news group's
lady a "Yellow Devil" for the better part of a year.
THEN, later, you complain to him about news group
postings and actually expect him to do something!

I bet Jeff is laughing his butt off at your stupidity!

Heat starting to get to ya there in Atlanta Jimmy?
That window A/C unit at your latest hovel must be
running up your Georgia Power bills!

From: k1oik@mindless.com
Message-ID: <6movlddjq1@nnrp1.dejanews.com>
Source record: 169113

They call them that because they have the strength of straw.

It'll take you dorks longer to decide on NG changes than it would to decide on a voice or CW ID for a repeater.:

"Voice"
"CW"
"If we have a CW ID it'll scare away no coders"
"who cares ?
"I do"
"I don't"
"Then leave"
"No you leave"
"Guys if we do a CW ID, how fast"
"5"
"10"
"I ain't waiting through no 10 word per minute ID"
"How about both"
"takes too long"
"You in a rush ?"
"Yeah, when I call my wife"
"Get a cell phone"
"Why, when I have an HT"
"Ham radio isn't a cellular replacement"
"why not ? I don't need to call that much"
"Have her get a license"
"no, then I need another HT"
"ID is the topic guys !"
"CW"
"Voice"
"If CW, how fast ?"

(return to top and reread for one hour then eat doughnuts and talk on repeater on way home)

Hi Paul,
I did a writeup on the FT50-RD for my club's web page. It's not too
long, so I'll insert it for you here:

Wanna play HARDBALL ? Try a YAESU FT50RD. Users of this little
buggar are still trying to decide if it feels like holding a warped baseball
or a large rock. Ergonomically designed by a total idiot, this HT is
guaranteed to be the most uncomfortable Handy Scratchy you'll ever
picked up. As thick as it is wide, the FT50RD's PTT switch is strategically
located in a position that's sure to cause carpal tunnel syndrome quicker
than any mouse ever invented. The display is extremely hard to see, and
with the addition of the SOFT CASE, it's virtually impossible to tell what
band you are on so you will meet lots of new people every time you get
on the air. Comes complete with BELT CLIP (but tighten your belt before
you hook up or you might loose your pants) and a WALL WART CHARGER
that's great for travel cuz it's only about twice as big and heavy as the HT.
YAESU didn't forget anything when they designed this wonderful talking
machine - the WALL WART plugs into the RADIO and NOT into the
battery, so don't bother buying a spare battery cuz you need another
RADIO to charge it... MILSPECD TUFF so you can fall in a MUD PUDDLE
and keep communicating. This radio proves beyond any doubt that the
only thing slower than Yaesu's web page is their design team. Michael
Jackson glove not included.....

Anyway, Paul, that's what I think of my Yaesu FT50-RD. If you
are interested in a used one, let me know. It's at Yaesu right
now getting fixed, seems like they put a wrong part in the thing
somewhere, and the radio drains a fully charged batter in about

12 hours - when it's turned OFF.

We use XTs and small AT's for FD logging computers.
So, we can't use anything big, or needing Windows. The WR9R
FD Logger has always been very good for us. Is there a newer
version which has the 1998 rules? Where can I get it?
Thanks. -Pat

5577. Q: Battery Current

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-23 00:00:00 UTC
From: "D. Rea" <gcs@netacc.net--NOSPAM>
Message-ID: <35900F45.50D05509@netacc.net--NOSPAM>
Source record: 169117
Cross-posted to: rec.audio.car,rec.radio.amateur.equipment,rec.radio.amateur.misc,sci.electronics.basics,sci.electronics.misc,rec.autos.misc,rec.autos.sport.tech,rec.autos.tech,alt.autos,alt.auto.parts.wanted

I have a 1995 Ford Taurus SE...I'm installing several radios, as well as lights and some other electrical equipment for Ambulance service. (I'm a first-responder for my corps)

All of it is going through large power feeds to the trunk, and will be operated with relays (a switch panel will be located in the passenger compartment).

HOW MUCH power can I pull of the battery of my car...it has a 3.8 litre (the larger of the two) engine, if that makes any differene, perhaps in the size of the alternator or the current draw of the engine itself.

I will probably need to pull 10-20 amps on standby, which I know is no prob. But on peaks, I'll probably need 30-40 amps. Will my car and batt be able to handle this?!? I have a gold tap right off the batt terminal, and three ten-gauge lengths of fuel/oil proof wire for the power.

To reply to this message, be sure to remove "---nospam" from the reply-to address. This is insterted to prevent automated mail-spammer "bots" from getting my address and adding me to bulk e-mail lists. Thank you!!!

Jim,
Thanks for your honesty. $300 plus is a lot of money to spend for
something that I won't be completely satisfied with. What would be a
good dual band, wide recieve, modifiable HT to look at?

Paul

ban voice. allow only CW in amateur radio. I would rather see
disappearence of amateur radio by CW itself. People should keep
saying know code = know ham.

Why is the military use/non-use of CW on military circuit of concern to the
ARRL? If the ARRL can publish military matters in the ARRL Letter, why are
you not calling it a Breach of National Security?

Let us loof to the eventual termination of MARS as an
> antiquated, obscure, insecure system (as seen during deployments,
> re: Desert Storm),

WTF over? MARS was used in Shield/Storm and Somalia.

and see then if NCI couples Defense's closure of

5591. Those who threaten legal action against ISPs...read the Supreme Court decision and weep!

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-23 00:00:00 UTC
From: thelibnet@aol.com
Message-ID: <1998062300362200.UAA23419@ladder01.news.aol.com>
Source record: 169145

To all those in this newsgroup who have or are attempting to stifle free speech by complaining to a person's provider and threatening legal action in order to get their Web pages removed and/or Internet service suspended, you just lost a big one today. The Supreme Court ruled for AOL in a case involving information which had been posted from the service by a third party. Basically, it said that providers are NOT responsible for defamatory material posted on their systems.

5592. Are you REALLY richwhiten?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-23 00:00:00 UTC
From: tbryant@NOSPAMcannet.com
Message-ID: <6mmsg2$htd@dolphin.cannet.com>
Source record: 169146

Having listened to 20 and 75 meters for entertainment purposes over the years, it's interesting to see the richwhiten@aol.com address in some of the headers.

However, there are some that are skeptical as to whether it really is *THE* Rich Whiten, a.k.a. WB2OTK. A little bit of trivia that only the *REAL* Rich Whiten would know should prove this.

To richwhiten@aol.com please answer these questions.

1. Who threatened to assault you at the Orlando hamfest one year, and said they would have a lawyer with them to bail them out of jail if you filed charges? This same individual also played a tape of Fred (I can't remember Fred's callsign) offering a reward if they could prove you were a liar. It was played several times during the course of about a month on 14.313.

Who is this person and what is their callsign? (BONUS: Where is this person now?)

2. What is the first name of the person the above individual conversed with on a daily basis that lived in Massachusetts?

If richwhiten@aol.com answers these questions correctly, I will be convinced that he is the *REAL* Rich Whiten, (or at least a very knowledgeable imposter!)

Tom - N8ECW

According to RAC source, there are about 45000 amateurs in Canada.
The number should be less since deceased amateurs who aren't notified
to IC are still included in the figure. Say 42000 or whatever.
Now... amateurs are about how many % of whole population in Canada ?

Well... Canada's population is about 30,000,000 so it is about 0.15%.
Think of those are active on the frequency. I know a lot of amateurs
who do not active anymore (1 in 2) so actual number of active amateur
should be less than 0.1% of whole population in Canada. That's very
small. 1 in1000. Maybe we should all ask our neighbours if they
are interested in morse code !!!!! (and I am sure they will think
who the hell you are.) Keep good work by saying know code = know
ham !!!! Help us destroying amateur radio !!!!!!!!!!!!!!!!!!!!!!

I'm not using a "bogus" email address, I'm not using someone else's
domain (I still don't see how exactly this is possible) and I'm not
subscribing anyone to anything.

Please don't make any statements that do not concern the topic or the
newsgroup.

You know two hams? Who is the other one?

> so actual number of active amateur
> should be less than 0.1% of whole population in Canada. That's very
> small. 1 in1000.

The number of cabinet ministers in Canada is even less than that. But
the population still knows about them.

> Maybe we should all ask our neighbours if they
> are interested in morse code !!!!!

Why should we ask the public about the future of ham radio?

> (and I am sure they will think
> who the hell you are.)

Your neighbors have no idea who you are. You need to get out more.

> Keep good work by saying know code = know
> ham !!!! Help us destroying amateur radio !!!!!!!!!!!!!!!!!!!!!!

Why do you want to destroy ham radio?

Only Cutie Boy would be obsessed with something he wants destroyed.

ISPs might not be legally responsible but some still feel a moral
responsibility. I was able to get someone's AOL account cancelled
just this last weekend due to an objectionable email the user sent.
The AOL rep was very sincere in his remarks, mentioning they will
continue to agressively investigate abuses committed by their users
and take appropriate action.

As long as one is using someone else's system, he's *not* free to
send everything his sick mind might desire. You're not off the hook
yet, Lib.

>in question.)

1) why do you always follow up only on my articles ? If you like me,
just say so.

2) I heard the conversation on local repeaters (i.e. DX Listener's
net) about how come the ham fest had to be cancelled. I heard and
read (e-mail) the same thing more than three times.

This kind of needless stuff should not be discussed over the
newsgroups and wasteful of storage (i.e. the readers have no idea
about DX Listener's Net). I don't have to prove my points over the
newsgroups.

Ah yes, where have we seen this one before?

Here's the scenario:

You post something that I don't like. I'm feeling pretty powerless
but pissed off. Let's see what I can do about it...OK, I'll contact
your ISP to see if I can get you in trouble. Wow! Sounds like
something we would have done way back in grade school. You know...You
better put that back or I'm gonna tell the teacher. If only life were
still that fun and simple.

Get real! Let's say you actually manage to have an ISP account
cancelled. Who the f*ck cares. They're a dime a dozen. Takes about
5 minutes to get a new one. Faster for AOL. On top of that, how can
you actually be COMPLETELY sure that you have all the right
information? How can you be completely sure that you have the right
name? How can you be completely sure that you're completely sure?
What you see [even with extra headers turned on] may not be what you
get.

So, why don't you just sit back and listen to all of this inane
bantering and postering with the rest of us. It's fun! It's
entertaining! It's free!!

Does anyone know how the automated stations work ?

Examples would be the satellite or remote special DX stations that log your QSO with an ID that you send off to get a QSL etc... the QSO is pretty well automatic and doesn't vary too much from a standard form.

I'm trying to figure out how to set one up and I'd be really interested to hear from anyone with an insite into how to set up such a station. One possible use would be during a Himalayan or Karakorum expedition next summer if the respective goverments would allow the licence.

Dominic

I think if I remember correctly you will have to experiment tofind the
correct measurements for freqs that high. I don't think the specs go that
high. I does work though, I set one up on 161.XXX at work. Works great.

Good luck
Mike

5610. Field Day rules unclear on VHF counting as a transmitter?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-23 00:00:00 UTC
From: nospamdtse@inorbit.com
Message-ID: <6mnpn3$m1g$1@news.bctel.net>
Source record: 169164

I am just wondering about this after reading the Field Day rules for 1998 (by ARRL).

If we only operate one HF transmitter, and wishes to operate a seperate (of course) transmitter on VHF (over 30MHz), do we need to count the VHF transmitter into the category so it becomes 2A (we use emergency power)?

(It is unclear because of 4.1.2., it says that you can operate a VHF transmitter without changing basic category if you have 2 or more HF trasmitters. Very strange wordings.)

It generates 2 questions:
1. Didn't say if you can operate VHF as a seperate transmitter if you have less than 2 HF transmitters? Didn't make sense because there should be no restrictions on transmitters nor modes.

2. Didn't say if an VHF transmitter will count if less than 2 HF transmitters. But it is so silly because a station running 2 HF transmitters having a VHF transmitter will be 2A (assuming emergency power), and then a station running only 1 HF transmitter having also a VHF transmitter will be 2A as well. Think about the scoring difference between the two if other conditions are similar.

If you think both are silly, then if you look back at 4.1.2, it doesn't make sense.

We'd like to play by the rules, but this time I cannot understand it. Somebody helps...

A pity, Tom, but there does not seem to be a way to use a killfile with aol. For some of us, aol has the only local access number and so is the only game in town.

Funny thing, though, after a while you can tell by the subject who the original poster was if it was Blurt or somebody like that. That helps somewhat. Just hit DEL and POOF! Another Blurt post (or Oris, or Obrian or Masa or etc) bites the dust.

It's not quite that easy.

Problem #1 is that you need to provide isolation between the receiver and the transmitter. Try a little experiment. Stand next to another ham with your HT's both set to the same local repeater. Listen to your HT while (s)he transmits on theirs. Surprise, you WON'T hear the other ham's signal coming back from the repeater! His/her signal on the input frequency of the repeater, 0.6 MHz away from the frequency you are listening to, will overload the receiver in your HT and prevent you from hearing the repeater's output. In a real repeater, there are two basic ways to get around this problem. One is to physically separate the transmit and receive antennas and radios, preferably by hundreds to thousands of yards (or meters, if you prefer). Then, of course, you have to somehow get the signals from one radio to the other... The other solution is to install "duplexers" or "cavities", which are large (and expensive) devices that have extremely narrow bandpass and bandreject frequency ranges.

Problem #2 is that there are a few more requirements for a repeater to be in compliance with FCC regulations. You neglected to mention the repeater controller sending out an ID at least once every 10 minutes; there needs to be a "watchdog" timer that brings the system down automatically if it gets "stuck" in transmit mode; the repeater trustee and/or designated "control operators" need to have a way to control the operation of the repeater, especially the ability to shut it off from a remote location in the event that it malfunctions. And, of course, the ability to shut it down should (must?) be by a means OTHER than a signal transmitted by the control operator on the repeater input frequency, such as a modem to the controller PC, a separate "command channel radio" at least one band higher in the spectrum, etc. These things can all be accomplished one way or another, of course, and most of them are amenable to being done mostly in software, assuming that you are willing to devote a PC to this purpose full-time.

Problem #3 is that you need to find an open pair of frequencies to do this on, if you intend it to be anything more than an occasional short-duration experiment. That means an application to the local Repeater Coordinator. And in the Minneapolis/St. Paul metro area, you will not find an open pair of frequencies in the 2 meter band. Open frequency pairs are also rare to non-existent in the 70 cm band in this geographic area.

I don't want to douse your enthusiasm completely, however. Do some investigation, and then consider some experimentation as time, money, and expertise allow. Take the "virtual tour" of the Twin Cities Repeater Club repeaters at http://www.tcrc.org/tech/tour.html for a start. There's always more info to add, but this will give you some ideas of what can be involved. Another place to check out is http://www.hamtronics.com which is a supplier of components for building your own repeater. I have no first-hand experience with the quality of their repeaters or kits, but if nothing else, their catalog gives you some insight into the kinds of components (and their costs) that go into building a full-fledged repeater. Another way to experiment with the technology of a repeater on a limited budget is a "cross-band repeater". This avoids the whole problem of "receiver desense" and the need for expensive duplexers by putting the transmitter and receiver on separate ham bands, e.g. 2 meters to 70 cm. Many dual-band mobile VHF/UHF radios can perform this function with no extra components. But most of the time, these radios are marginally legal at best, because they lack any automatic ID, failsafe timeout timer, or remote control functions. So there are still some features left to your programming expertise! You should also check out the May, 1998 issue of QST magazine, a publication of the American Radio Relay League (ARRL). There's an excellent article starting on page 33 that details the author's design and implementation of a "remote base station controller". In his case, he used the setup to allow him to operate an HF radio (ICOM IC-706) remotely from his HT. I think that you will find this article pretty interesting, since the design is mostly SOFTware! Even though you probably wouldn't be copying his design verbatim, it should give you plenty to think about.

Good luck on your project!

John (KB0ZEV)

5617. Free antenna Program

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z JUNE 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 24 JUNE AND FORECAST FOR 25 JUNE - 27 JUNE
STATUS INDICATORS SOL:** YELLOW ** MAG:** YELLOW ** ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 24 Jun: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 24 Jun: 105/54

GOES satellite data for 23 Jun
Daily Proton Fluence >1 MeV: 6.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.20E+06 (normal)
X-ray background: B2.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Jun 26 Jun 27 Jun
Activity Low Low to moderate Low to moderate
Fadeouts None expected Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Jun: 100/48
COMMENT: A solar region in the north east quadrant of the sun
is showing increased flare potential.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 24 Jun: Mostly quiet to unsettled,
with one active period.

Estimated Indices 24 Jun : A K
Learmonth 16 3334 3333
Fredericksburg 15
Planetary 18

Observed Indices 23 Jun : A K
Fredericksburg 8
Planetary 10 2222 2334

2B. MAGNETIC FORECAST
Date Ap Conditions
25 Jun 15 Unsettled to active
26 Jun 16 Unsettled to active

27 Jun 10 Unsettled to active
COMMENT: Active periods expected next few days, based on recurrence.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
24 Jun Normal Normal Normal-fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
25 Jun Normal Normal Fair
26 Jun Normal Normal Fair
27 Jun Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
24 Jun 52

Observed Australian Regional MUFs:
Generally 15% depressed during local day. Spread F
observed local night hours southern region.

Predicted Monthly T index for June: 71

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
25 Jun 50 15% depressed southern region.
Near normal northern region.
26 Jun 60 depressed 10 to 15%/near predicted monthly values
27 Jun 60 near predicted monthly values
COMMENT: Spread F observed in southern Australian New Zealand
region overnight. Mild depression expected for southern region
during local daylight hours today (Hobart and Christchurch).

> won't do a job like this.

Like most of his replies Cutie Boy doesn't have a CLUE what your talking about, the answer is yes. The problem is a simple 30 second transmission is first recorded, then played back causing a 30 second delay in the QSO, not very desirable but it does work.

I'd say go for it, if 2m is crowded in your area you might consider UHF, additionally check the repeater regs, it seems to me there was something about this mode of operation that required a separate control frequency in the event of a problem and I think this reg applied specifically to 2m but not 220 or 70cm but I'll leave that for someone else to comment on. There really is no reason to operate 'split' since the computer will behave the same on simplex, but if your close to the other station you may hear the transmission twice. You might be better off using one of the new digital voice recorders now available and building a simple controller from simple 4000 series chips instead of tying up a whole computer although for testing, the soundcard and a Visual Basic program sound like the fastest means to and end. The phone patch would have to be designed to break every so often to look for a carrier on the input otherwise if your party kept talking he would eventually time out the transmit, there was a simplex phone patch sold at one time that operated on the same principle. This concept does work Ryan it's just not very practical.

Good luck to you OM,

Tim, ka8ddz

Well Mr TheLibNet@aol.com
I have to say that I agree with you. ISPs are a dime a dozen. I have
lost 2 ISPs in my 3 years of internet experiance because some crybaby
got mad cause they couldn't take what they dish out. In both cases the
fool didn't know the favor that he did for me. When I lost the account
at NEGIA.NET I moved my Domain dirtball.com over to SMARTCOM.NET at a
savings of 30 bucs amonth. They host my Domain for about 15.00 a month
including the second mailbox. I also move my ppp connect to another
company I leave nameless. You know why. That service feeds my packet BBS
system and my kids email addresses. That service costs 20 bucs amonth.
Then I tryed the MCI2000 offer. Boy what a ripoff that was. Heck They
made getting on the internet so complicated. They also didn't support
Unix, wouldn't even talk to me about Unix, and the conection was crappy.
Then after being online for two months they raised the price from 15
bucs back to 20. The old bait and switch. The MCI connection was a bad
experiance all together. So when I lost that account for the same
reasons a loser couldn't take what he disks out thats when I came over
to bellsouth. The loser did me another favor. I get highspeed connects
and they will work with my Unix system over here so I have gained in
both cases. So losing an ISP because some wimp crys tomuch isn't allways
a bad thing. At least in my experiance its been a good thing. NEGIA.NET
had a allful office attudefrom day one, and MCI had a crappy service all
together. So in both cases I won and didn't even know it at the time. So
your right ISPs are a dime a dozen and not a problem if you pay your
ceditors and have a credit card. Its not that simple for losers. They
have to find a ISP that will take cash or put it on their phone bill.
Thats when finding a ISP can be a allful experiance.

DO NOT BUY THIS "DEAL"

First, Radio Shack's got it for $100. Great scanner, PC link, cool stuff.

Secondly, there IS NO KEYPAD TRICK for the Pro-64. I own one - I've looked
around just because I want to prove this scanner scammer wrong.

Just looking out for my fellow hams!

LRMD HAMFEST ⊠98
1998 06 23
We invite radio amateurs to traditional Lithuanian Amateur Radio Society⊠s (LRMD) hamfest, which take place July 25 ⊠ 26 in Northern Lithuania, Siauliai district.
Citizens from most Lithuania neighboring countries do not need visa (Baltic/Nordic countries, Poland, etc.)
CEPT T/R 61-01 licenses valid in Lithuania.
Traditional LRMD hamfest this year take place in Northern Lithuania, Siauliai district, in Berzenai. Time : July 25 ⊠ 26, 1998, but guests (amateurs with families) are welcome from July 24 (Friday).
How to find LRMD hamfest place? Best way to start from Siauliai (fourth biggest Lithuanian city) to Kelme. Approximately after 14 km crossing Bubiai and bridge via Dubysa river, turn right to Uzventis direction. After 18 km cross Ramuciai at main road, after 1.5 km will be Toleikiai village ⊠ look at right ⊠CQ⊠ directional signs and follow them. If You have VHF radio, search 145.500 simplex or R1 (145.625) repeater for help.
Some field food and drinks shops will be at hamfest place. You need to have a tent and sleeping bag, if want stay overnight.
LRMD hamfest main activities (among others):
Saturday, July 25, 1998
10.00-12.00 ⊠ participant⊠s registration (traditionally about 300, depend on weather).
12.00 ⊠ LRMD hamfest opening ceremony.
12.30 ⊠ ARDF competition.
13.30 ⊠ VHF contest.
15.10 ⊠ Telegraphy (RUFZ) competition.
17.30 ⊠ beer lottery & competition.
18.00 ⊠ flea market & lottery.
21.00 ⊠ camp-fire
23.00 - CQ OM, CQ YL, QRZ? 88! 73!
01.00 - QRT.
Sunday, July 26, 1998
10.00 - HF&VHF WAL E-11 square activity hour.
11.00 ⊠ some surprise.
13.00 - LRMD hamfest closing ceremony.
Some phones for additional information :

It would appear that none of the groups carried by a 100 vote margin.
If this had been a regular group creation vote, none of the groups would
have carried. No mandate, pro or con, has been obtained. The small total
number of votes would seem to indicate that this tempest in a teapot is
moot.

If you are going to pull such power continously you will need a very large alternator.

I have seen large installations with a custom dual set of alternators and a secondary battery system. It must work with the main one to be stable. It is a dual parellel system. I don't know the wiring for this, but there are places that do this type of work...

Some of the bigger vehicals use 100 amp and bigger alternators. This may be what you can use. Go to a big auto electric place. They can help you properly...

>YAESU didn't forget anything when they designed this wonderful talking
>machine - the WALL WART plugs into the RADIO and NOT into the
>battery, so don't bother buying a spare battery cuz you need another
>RADIO to charge it...

The external power connection is on the radio because it provides
power to the radio, not just battery charging. With an external
DC supply, the radio will transmit at full power even though the
battery is dead. A battery-charging-only jack on the battery
pack wouldn't allow this.

You *can* buy the CA-15 charging stand if you want. This gets its
power from the wall wart that comes with the radio, but you can just
drop the radio into it for charging rather than connecting to the
radio's power jack. And you can drop a battery pack into the
CA-15 while your other battery pack is on the radio. But when you
go on a trip, you don't *have* to take the charging stand along,
since you still have the charger in the radio. I think it's a
reasonable design.

Of course, my old Icom radio that has charging circuitry in each
pack is even more convenient - you can charge the pack on the radio,
or directly from the wall charger. But have you priced one of those
packs lately? I'll take the simpler, cheaper Yaesu packs, thank you.

>This radio proves beyond any doubt that the
>only thing slower than Yaesu's web page is their design team. Michael
>Jackson glove not included.....

My only question is: if you hate the radio this much, why did you
buy it? Didn't you try using it and look at the manual before
purchasing it?

It looks like a site transmitting 1 signal below 30MHz and transmitting 1
signal above 50MHz is treated the same as a site transmitting 2 signals
below 30MHz and transmitting 1 signal above 50MHz. Both would be 2x.

> stuff.

My mistake, my appologies. I accidentally typed in "64" when I
meant to type in "46". I made a mistake and didn't catch it until you had
corrected me. I own a pro-64 too (which is not for sale) and this is
where my little boo boo came in. Besides, the 64 had 400 memories, and I
said that mine had 100, so most intelligent people would have caught my
little boo-boo too.
It is a pro-46 for sale, and /not/ a '64.

> Just looking out for my fellow hams!

And it's well appreciated. I might have not caught it if it
wasn't for you. I might have had a really pissed off customer.

Cross-posted to: rec.radio.amateur,rec.radio.amateur.dx,rec.radio.amateur.misc,alt.ham-radio.hf

CHECK OUT THE POLAR BEAR 98 WEB SITE FOR ALL THE LATEST
INFORMATION.
http://webhome.idirect.com/~galati

FOR THOSE WHO ONLY CAN GET TEXT FILES, READ THE TEXT THAT FOLLOWS:

The DXpedition is starts on Sunday August 18 at 6:30PM
(22:30UTC) at Toronto Union Station. We will be operating
from the Ontario Northland Railway's " Northlander" under
the call sign XM3PBX. We'll probably be operating all night
until we arrive in Cochrane Ontario about 5:00AM Monday
morning. We will then transfer XM3PBX to the ONR's Polar
Bear Express to Moosonee, which will be leaving Cochrane at
about 8:30AM. We'll continue to operate on it until we arrive in
Moosonee about 1:00PM. We will then be setting up XM3PBX at
the ONR's Moosonee train station and operating from there..
Two from our group will move their gear to the Moose
Factory Museum and operate a station from there under the
callsign CH3HBC/325 to celebrate the 325th anniversary of
Moose Factory. The Moose Factory station will be operated
by Bob-VE3LLE and Lyle-VA3DXE as the main operators with
help from the rest of us.
John-VE3VGI and Aldo-VE3IMR/VA3AG will be flying up to
Charlton Island to operate an IOTA island, under the call
sign of either VE8C or VE8I. The call hasn't been
determined yet.
There is also a fourth station CI3XXV, that will operate
from various freshwater islands(weather permiting) under the
callsign CI3XXV/25 and maritime mobile CI3XXV/MM from the
M.V. Polar Princess out of Moosonee.
This will continue until Saturday August 22, when all
stations except XM3PBX and CH3HBC/325 will cease
operation. CH3HBC/325 will continue to operate being run
by local hams, Paul-VE3KBL and Craig-VE3CIJ until the end
of August.
On Saturday Aug 22, we will leave Moosonee on the Polar
Bear Express at 6:00pm operating XM3PBX as we travel south
bound. We are scheduled to arrive in Cochrane at 10:30PM.
XM3PBX will go off the air for a short time so that we can
transfer to our coach on the Northlander. We'll probably be
doing limited operating on Saturday night so that we can get
some sleep. The Northlander will leave Cochrane for Toronto
at 7:00 AM and we will be operating XM3PBX on the southbound
trip until about 4:00PM at which time the Polar Bear

DXpedition will cease all operations.
That's itinerary for the DXpedition. We intend to
operate on 40M, 20M, 15M, 6M and 2M. We haven't determined
the final frequencies, but we should have that information
by the middle of July.
Here is a list of the participants.

Aldo Galati-VE3IMR/VA3AG

John Harden-VE3VGI

Paul Lantz-VE3KBL

Garry Hammond-VE3XN

Bob Elston-VE3LLE

Don May-VE3UNA

Doug Baker-VE3BKR

5650. Thermonuclear Field Day Planned

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-24 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6mrmor$e4m$1@nnrp1.dejanews.com>
Source record: 168951

The Three Mile Island ARC proudly anounces that once again this year they will attempt to successfully power their Field Day site with the power of nuclear fusion.

Some of you may recall that last year's event had to be cut short when a containment vessel ruptured, releasing radioactive steam into the surrounding areas. What started out as an exercise became a full blown emrgency when the core temperature of the reactor, a simple-carbon based design modeled after the Chernobyl system, overheated. This year, visiting Russian amateur Yuri Mikhaelovich Anatovich Chernyenko, RV3SOS, assures us he has improved the design.

This year's reactor will draw water from neighboring ponds and recirculate the water therough a series of backflow proof pumps to cool the reactor core.

In lieu of backup rigs, Three Mile Island ARC asks that particpants bring bags of concrete and lead flashing, available at Home Depot.

I'd like to thank Jeremy Billones for his time and effort in conducting the straw poll vote.

It appears that the straw poll did not yield any conclusion one way or the other regarding the rec.radio.amateur.* groups. In my opinion, the low turnout was a combination of voter apathy, this not being an actual newsgroup vote, low individual user attention to ongoing discussion threads because of all of the noise and flamage, and misunderstanding over what votes mean. I have to say that I'm very disappointed in my fellow Usenet participants (especially Gary Coffman, KE4ZV, who allegedly had strong opinions on this issue, but didn't even bother to vote).

Since the sample was so small, I'm not going to attempt to draw any conclusion about whether the current newsgroups should be reorganized or reduced. One idea that did have some support from the pre-poll discussion was the possibility of a new moderated discussion newsgroup (rec.radio.amateur.moderated?) using a group of moderators to which submissions are randomly forwarded (much like sci.physics.research). The overall opinion seemed to lean towards either a moderated general discussion group, or a moderated question/answer group, with run-on arguments, obvious off-topic material, and ad-hominem attacks filtered out.

Give me about another month or two, and I'll have a draft RFD for the
members of rra-wg@theporch.com to review.

The 5th Annual Eagle Wing Festival celebration will be taking place in Groomsport Co. Down, Northern Ireland, on Friday 3 July and Saturday 4 July 1998.

Back in 1936, The Eagle Wing sailed out of Groomsport taking 140 Presbyterians in search of a new life in the New World. Although they did not reach their destination and were forced to return home after two months at sea, The Eagle Wing was the spark that lit the flame of emigration to the New World. Since then several million people have left these shores, taking with them their culture and traditions.

The Eagle Wing Festival will focus on how we have influenced American culture and how new traditions have returned across the Atlantic to influence out present day society and the lifestyles we share.

Bangor & District Amateur Radio Society (BDARS) has been approached to provide an exhibition amateur radio station - particularly to contact stations int he USA.

Anyone who would like to make a sked or help to operate the station should contact GI0SSA (gi0ssa@geocities.com) as soon as possible.

The callsign in use will be GN3XRQ/p (GI Club call for BDARS).

Further details about the festival can be obtained by phoning +44 (0)1247 270371 Ext 8110.

Many thanks for reading this,

Keith Stevenson
GI0SSA.

5658. Burt Renews Licence! Why?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-24 00:00:00 UTC
From: BColenso@aol.COM
Message-ID: <8eb8393d.35916bc3@aol.com>
Source record: 168959

Once again Burt Fisher renews his ham licence. His licence was due to expire 14 June 1998, but he renewed it 1-April-1998, insuring that he can continue to operate the ham bands without waiting for his renewal to come in the mail.

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
Callsign lookup results for:

CALL "K1OIK" NAME""CITY""STATE""ZIP""LIMIT"100"

Program v1.3-8 March 1997--Last database update 1998-06:22 11:02

K1OIK FISHER, BURTON E LIC ISU 1-APR-1998
EXTRA 389 OLD BASS RIVER RD LIC EXP 1-APR-2008
SOUTH DENNIS, MA 02660 LST UPD 1-APR-1998
>>

Why in the world would Mr. Fisher renew his ham ticket?

It's kind of like Lewis Farricon (sp?), while complaining about how bad white people are, being a member of the KKK. It doesn't make any sense, but then Burt isn't very intelligent.

How about if you try to talk with your friends at work etc. about ham
radio ? I am sure they are interested in code. Show them CW keyers
and say no code = no ham.

>What does the CW requirement and as you state "old fogs " have to do with it.
>It is people like you that have a negative attitude that is the cause.

Old fogs had to know CW. Old fogs love old stuffs.

Hi. I am interested in creating the newsgroup called
rec.radio.amateur.codeonly.destroyingham which is a general purpose
newsgroup to discuss supporting the code only in ham radio. (i.e. no
voice). let's support know code = know ham !!!!! let us help
destroying the ham radio by supporting code !!!!! allow code only in
ham radio !!!!! let's kick the as* out from ham radio and
improve the quality by allowing only CW !!!!! less people on the
freq is a good way to remove ham radio spectrum !!!!!
```

> Dave

Well, you see, Dave, the closet radio store to my house is about
7,000 miles away, and it costs about $3600 to fly over there and
visit. So I couldn't try it until AFTER I bought it - they suckered
me in with that Michael Jackson glove dripping water ...

I didn't hate it until it was too late. Wanna buy a spare ?

You didn't offend me. It is preferable to get a little flaming
for a boo-boo as opposed to accidentally delivering the incorrect product
and having a dissatisfied customer.

>>BTW: I love the Pro-64. The best $150 I've ever spent. I also bought an
>>HTX-202 (great ham xcvr!) for the same, so that's another $150
>>well-spent.
>>Radio Shack service is very bad, but most products are pretty good.

I love it too. It's relatively fast, triple conversion is great,
it's compact, etc, etc. Best $100 I ever spent.
I had a hard time finding it at that price too, had to have the
manager at the store drive up to another store and pick one up. Service
may be bad from HQ, but service is pretty good when dealing with that at
the store. It also helps to know the manager personally. ;)

>>If ignorance is bliss, why aren't more people happy?

They generally don't take enough drugs. :)

Dear Burt,

Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.
Please don't listen to those who talk as if they know you and your family
personally,
as I'm sure none of the things they say about your past is true. You,
with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.
Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.
Wishing you the best.

ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a

complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then

contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license

(WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. ï¿½Tired of not being able to get on the air when the wife and kids are using
the telephone or computer? Let my RFI Filters solve your problems for good. -
Modular design - Simple install - Many in use in Amateur radio and CB
service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail,

Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

>of morality.

Question: why not just delete the offending e-mail and be done with it? Why make a federal case about it? But that's par for the course for you liberals who are all in favor of free speech...as long as you're in agreement with the speaker. Otherwise, it's "hate speech", "racist", "sexist", "homophobic", or some other politically-correct term and the speaker must be censored and his ability to speak publicly removed at any cost. Typical.

Hey
Take a closer look at the so call warrent that covert62@bellsouth.net
is posting. The name of the road that the warrent is to be delivered is
hand written. Notice how everything else is in type. Also if you look at
the name Richard Whiten. The n in Whiten is done with a different type
(like the n was added). Also the amount of the check is blackout a
little to perfect. Notice how square it is and how the lines are to
perfect. This arrest warrent is a fake! Just another example of this guy
posting more lies about people who live what seems to be a happier life.
I thought that I would bring attention to why the warrent appaers to be
a fake. But thats just my opinion.

x-no-reference:yes
ï¿½Tired of not being able to get on the air when the wife and kids are using
the telephone or computer? Let my RFI Filters solve your problems for good. -
Modular design - Simple install - Many in use in Amateur radio and CB
service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail,
Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time
in the past or present, the Attorney General of the State of South Carolina
would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic
devices known as "RFI Filters" that contain nothing more than about 60 cents
worth of useless surplus electronics parts. Mr. Whiten claims to have a
ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US
Patent database yields no such patent application or any past patent activity
by Mr. Whiten. If you have purchased one of these devices then you should
immediately demand that Mr. Whiten return your funds. If he refuses, then
contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Loser! pig vomit I can't belive that you call anyone a loser. Lets see
14 years in the Navy, got kicked out for dope. That says loser in it
self. But got busted for dope in Paulding County whats that? more
losing? LOL damn! What is this about a DUI? Then to steal your best
friends wife even though from the talk everyone on the CB band got some
of that. There is a film of that floating around. I'm sure old Darrel
really had my sue. I think the only why that he could get any of that is
in his own mind. He probly dreamed it while he was on top of his cow.
God knows if she got on top of him it would kill him. So I'm glad that
the thoughts of my wife helped his sorry life. There is another loser.

Basicly, it is dependant upon the RPM of the engine and the output rating (at RPM) of the alternator. While alternators do achieve higher output at lower engine RPM than generators, they still have to be rolling at about 2000 RPM or more to get near rated output.
Most std alternators are 35amp MAX output, many are 50 amp. You can get (and will need!) 60,70,90 amp units, since they will put out a larger fraction of needed current at lower engine RPM.
Your headlights on highbeam draw about 10 amps and they will pull down the engine rpm at idle. A 40 amp load on a 90 amp alternator will probably stall your motor unless you put on a throttle solenoid to boost the rpm under heavy load.
The conversion from rotational energy thru belt and pulley to electricity by alternator is at best 30% efficient => much heat => large belt and pulley....

At the very least, you will need to install an ammeter so you can tell how much current is being supplanted by the battery, (so you will know when to expect a dead battery)

You may do better by installing a deep cycle battery in the trunk (better in the engine compartment if room) to handle the intermittant peak draw (40 amps) and use a 50 amp alternator with the smallest alt pulley you can get. (to increase the idle speed of the alt). Make sure the radio is connected to this battery, and the battery connected to the alternator thru an isolation diode (note, 0.7 v drop => 14.0 volt regulated charge voltage). This way you can always start the car if the radio does not work ;^(

> I will probably need to pull 10-20 amps on standby, which I know is no
> prob. But on peaks, I'll probably need 30-40 amps. Will my car and batt
> be able to handle this?!?

In stock trim, not for very long. Belts will break, feild brushes will burn, diodes will fail, stator will char and short,...This all depends on the duty cycle though; if you want 40 amps on demand for communication (approx 50% duty cycle) you will kill it more quickly than for monitoring with infrequent transmission.

Rick (automotive mechanic in my former life)

> much better to talk about something else.

You're telling me people cannot receive amateur radio in their rooms?
Have you not ever heard of a scanner?

Personally, I tell my friends of amateur radio and they are usually
impressed.
Keep in mind that most people don't realize the good points of ham radio
until they become hams themselves.

> >I would not want you to be a spokesperson for ham radio as
> >all you have to say about ham radio is negative.
>

> and try to keep others outside.

How does a CW requirement make ham radio negative?
That's like saying AM is destroying commercial broadcast radio.

Cross-posted to:
alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Recieves on:
29- 54mhz FM
66- 88mhz FM (after keypad trick)
108-137mhz AM
137-174mhz FM
406-512mhz FM
806-956mhz FM (unblocked)

Has 100 memories in 10 banks. Runs off of 4 AA batteries.
Included are the AC adaptor / charger, and instruction manual.
The restoration trick involves soldering SMT components,
I've allready done that for you. Plus, you can undo the hardware
mod and then do the keypad mod. "Oops, sorry about resetting it
like that officer, but as you can see, this can't do cell..." :)

It works just fine and has no problems.

Asking $140, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and don't
use this at all anymore. I need the money more than I need the
hobby.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,

Recieves on:
29- 54mhz FM
108-137mhz AM
137-174mhz FM
406-512mhz FM

Has 50 memories in three banks. "Private" bank holds 20
user selectable freqs, "Police" bank holds 20 user selectable
freqs and has a bunch of pre-set freqs that can be locked out,
"Fire/Emg" bank holds 10 user selectable freqs and has has a
bunch of pre-set freqs that can be locked out, "WX" bank does
all weather freqs, and "Air" scans the entire aero band.
Unit uses a mounting bracket, which was lost by the
previous owner. Not included. No manual, but I can instruct on
how to program it. Runs off of 12v DC, power supply not included.
Basically, just the unit itself. But it'd be a great
little thing to keep out in the car or truck.

It works just fine and has no problems.

Asking $70, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and don't
use this at all anymore. I picked it up to put it in my car, but
never got around to doing it. I need the money more than I need
the hobby.

A reminder that this weekend (27th - 28th June) at the Shugborough Hall Land-Rover Series I Club 50th anniversary event a Radio Amateur Special events station with the callsign GB50LR will be operating. 1998 marks the 50th year of production for the Land-Rover company, and the Series I event will attract around 450 working examples of the first mark of the vehicle all dating from 1948 to 1958.

The station will be operated at various times during the weekend on all H.F. bands, 2m, S.S.B. and FM. You'll just have to listen for the C.Q. over the weekend, but that's going to be part of the fun! Shugborough Hall is located approx. 30 KM North of Birmingham, England (OS grid reference SJ9922).

Packet Radio messages for GB50LR can also be sent over the weekend via B.B.S. GB7RUG. (GB50LR@GB7RUG.#28.GBR.EU)

All contacts made throughout the weekend will receive a commemorative GB50LR QSL card.

Testing on the Friday while the station is set up will use the callsign GB5LR. Any licensed amateurs attending the Shugborough event are invited to help out running the station during the weekend.

Good luck and safe journey to all who are attending the show, and we hope to hear all the 'hams on the air over the weekend.

The battery can handle plenty of intermittant load. The question is the capacity of the alternator - will it keep up with your average load? If not, you will eventually run the battery down even with the engine running. If the capacity is not marked on your alternator, you should be able to get the info from a dealer or parts supplier. I suspect that your standby current will be no problem but the peak might be, depending on how long you expect to operate at that load.

Source record: 169014

It does not work. If you try to force to make a repeater, you need
to have two HTs or one with dual mode (i.e. VHF-VHF, VHF-UHF etc.).
Logical sense. While you receive the carrier, you must keep listening
to the carrier and retransmit at the same time. i.e. one HTX-202
won't do a job like this.

no way. unless u use two HTs for input and output (or one with dual
capability), you can't do it. logical sense !!

why not get a phone patch which gives you the repeater access mode
also ? I think it is from "connect systems." CTS-800 is the code
of the product I believe. It gives you autopatch as well as the
choice to turn your tranceiver(s) into a repeater.

5714. Making a Repeater

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-24 00:00:00 UTC
From: Ryan Faricy KC0DSZ <jtonsa@worldnet.att.net>
Message-ID: <6mqsvj$ded@bgtnsc03.worldnet.att.net>
Source record: 169015
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I asked someone else about this:

Would it be possible to make a [mostly software-controlled] repeater using my HT by way of Microphone wires connected to its respective
place on the sound card, along with a scanner to receive on the input frequency?

For all I know about it, I think it would work. I would just set my HT to the output frequency (in this case for 2 meters, 600KHz higher than to what I've got the scanner set).

Then, I would make a software program (I do programming) to recognize the end of a transmission, wait a second, send the courtesy tone (any computer sound I want to send - using the soundcard and cable connected to the Mic jack on my HT), stay on the air for a couple more seconds (by sending a "blank" sound file for a couple seconds), and if no one talks, it stops transmitting.

I think this would work, and it could even be profitable. All you would need is my program, any soundcard, and HT with a Mic jack, the two cables to connect, and a scanner. It is also very modular, since I could add anything at
anytime - I could even add autopatch (although I would want a second phone line for that) using a DTMF decoder, which I also have.

Good point - having two wouldn't be a big deal. I COULD also use a scanner,
since I've got two of those.

I can't believe I didn't think of that! I would just use a scanner then.

Thanks for pointing my mistake out!

Ham radio is more than just calling CQ and getting QSLs. Try getting involved
in a traffic net or getting in a round table discussion about electronics.
What about joining you local radio club and do something positive for ham
radio.

>> Go out and do

Sure am. I am a reserve police officer along with my regular full time job. I also help in collecting and distributing toys for the needy children during the holiday season, collect and distribute food to the needy, help the young children by volunteering my time to coach soccer and basketball. I have on a number occassions given money out of my pocket to people that are needy and have even bought them a meal during my patrol duties. We are not all like you, spoiled and have anyting you want. There are people out there that have quite less than you and could use some help.

ï¿½Tired of not being able to get on the air when the wife and kids are using
the telephone or computer? Let my RFI Filters solve your problems for good. -
Modular design - Simple install - Many in use in Amateur radio and CB
service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail,
Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time
in the past or present, the Attorney General of the State of South Carolina
would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic
devices known as "RFI Filters" that contain nothing more than about 60 cents
worth of useless surplus electronics parts. Mr. Whiten claims to have a
ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US
Patent database yields no such patent application or any past patent activity
by Mr. Whiten. If you have purchased one of these devices then you should
immediately demand that Mr. Whiten return your funds. If he refuses, then
contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include

the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a

complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a

complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

5729. Re: Should I get a Yaesu FT-50 RD?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-24 00:00:00 UTC
From: n8blk@aol.com
Message-ID: <1998062400095800.UAA09374@ladder01.news.aol.com>
Source record: 169069

In article <358fa937.5415340@news.mindspring.com>, Paul writes:

>I've finally accumulated enough money to buy a HT, and I was thinking
>of the Yaesu FT-50 RD. One of my concerns would be the battery pack
>life. What kind of lifespan should I expect from the Yaesu powerpack?

Unlike KH2D, I love my FT-50. I also note that the Wall Wart as he
describes can power the radio for receiving while it's charging the battery.
It thus with proper planning can be used to monitor while a depleted
battery is charged. The design is silly from some perspectives,
and logical from others. I also have the MAHA universal fast charger,
which I can use in the car to charge my batteries by plugging it into
the cigarette lighter (real useful at hamfests for example if you have a
direct connection to the battery rather than a switched one to charge
with) so I rarely use the wall wart, but I managed to live with it and
always have a charged battery when I wanted to talk and I only had
two batteries. I also note that there are NiMH batteries 7.2 volts @
1800 ma which will go on seemingly forever. With the standard
battery and mostly listening with occasional talking I got a full 8 hour
day out of the battery. If I talked more on high power, I only got about
3 hours. I usually check to see if I can make it on low power, and
with that my 8 hour figure was standard for me.

Some of the older models had a problem with the battery self discharging
or rather being discharged by the radio slowly, but mine doesn't have
that problem. It will sit with the battery ready to go for days.

The biggest complaint I have about the thing is that it is possible to
turn on the radio in your pocket or while stored in a brief case or
some similar location. There was supposed to be a redesign of
the power switch, but my solution was to disconnect the battery if
I put it in briefcase.
I don't find the shape so bad, but then again, I got used to a much
larger HT, namely the first Yaesu dual bander, and I don't find the
ergonomics all that bad. There is a battery pack into which you
can plug AA batteries, but I suspect that's more of an option for
emergencies than for constant use. I had such a pack for Yaesu
727, and rarely used it.

I suggest you find a friend with the HT, and play with it for a long
while before making a decision. I for example find the shape of the
ADI dual bander obnoxious, but I know others who love it. Icom,
Kenwood, Alinco and ADI all make competing dual banders and
each has advocates. Before you spend the money, play with the
radios if you can rather than depending on my judgement or anyone
elses. If you check the for sale ads, you'll find that every HT has

people who bought one and now don't want it.

5730. Re: Info on Drake Theta 9000E Data Terminal

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-25 00:00:00 UTC
From: Jojo Colina <jojo@4d.net>
Message-ID: <3592a470.0@newsboy.4d.net>
Source record: 168821
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.boatanchors

Larry,

The Theta9000 is a RTTY terminal. FSK is for keying an fsk circuit which shifts your vfo either 170 or 850 hz from center to establish a mark condition. PTT merely keys down your PTT and brings your trnasmitter into a transmit condition. It has been quite a while since I had one of these but I believe these also had an audio output so you could do AFSK.

AFSK is adequate in most cases, especially on VHF. The FSK keyers are all from an older time when we had KWM-2A's and shifted vfo freq directly while the xmtr is keyed down in cw. This produced cleaner fsk modulation than other methods at the time, before the advent of synthesized radios.

Be aware that RTTY duty cycle is much higher than SSB or CW. I have burned out many a 6146 running rtty.

He will never make 24K. He is a loser! Lets face it a lifer without a
life will never make more than $5.15 a hour, if he can get someone to
even get him a minum wage job. Most dishonable dischargies usally end up
on welfare or they find some dumb slut (don't they call her bowling pin)
to take care of them or they become dope dealers. Its funny I can prove
each one of these things I have said about this loser! So that being the
case I wonder what bill won't get payed this week or how many children
he will sell dope to this week so he can get his 12 pack.

Hello thanks for reading. I am looking for 8-10 pieces of Andrews 1"5/8 LDF Heliax. Does anyone have some roll ends or short pieces they would be willing to part with for a reasonable price? Thanks for your help.

I guess you and Sarah Brady have never seen the ovens of Auschwitz. Can that
be repealed? Too bad, huh? Maybe if they had owned guns...

5735. Questions on QRP Antenna, etc.

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-25 00:00:00 UTC
From: J Samuel <jaysam@deletethis.deletethis.caa>
Message-ID: <3592AF8D.7022@deletethis.deletethis.caa>
Source record: 168826
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi all,
I would like to start back on CW QRP after many years. I used to homebrew a long time ago. My knowledge has gotten a little rusty. I am looking for the following information.

1. I am planning to use a 3W TX on 20m to begin with. I will later on add a 40 m QRP. What kind of antenna can I use so that I can maximize the actual transmitted power. On reviewing antenna basics and assessing space constraints I can either put up an inverted V, or some sort of a long wire antenna along the gutters on my house. A flagpole vertical is also a possiblity. So my question, what would be a good ant for QRP from the types above and any related designs?

2. I would like to put as low loss a transmission wire as possible (cost permiting). The local ham store sells RG213 for .36 per foot and LMR400 for .59 per foot. Is the LMR400 worth it over RG213 as far as QRP work is concerned ? Also I am estimating a cable length of about 50feet. Is this too long for 3W CW ? Should I restructure my shack to shorten the cable length ?

3. Do I need a 1:1 balun if i use a inverted V antenna with the above mentioned cables ? Can I just use a connector and hook up the cable directly ? I am asking this from the point of view of loss.

4. Is there a lot of activity in the 80 m band in CW QRP ? Is it worth considering designing a shortened 80 m antenna ?

5. How do wave (antenna) traps work with 3W CW for multiband antennas (like inverted V) ? Has anyone used a wave trap for QRP successfully ? Where can I get details to build wave traps (I have never built wave traps so detailed instructions will help) ?

6. I have a radio shack portable communications RX. Has anyone used this radio for QRP RX. Can I just build a simple crystal controlled fixed freq. QRP TX and use the radio shack RX ? Has anyone tried this setup ?

Please post and email replies to jayarajans@hotmail.com

Thanks in advance for help.

Regards,
Jay Samuel

ï¿½Tired of not being able to get on the air when the wife and kids are using
the telephone or computer? Let my RFI Filters solve your problems for good. -
Modular design - Simple install - Many in use in Amateur radio and CB
service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail,
Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced.

Listen for me on 27.665 LSB using my latest 5 KW amplifier.
Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160.
Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+
Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Visit my site .. take the Ham Page.
There you will find an antenna Program that
I wrote which will calculate the length and
inductance needed for a 5/8 wave vertical,
and other stuff.

The inductance is computed for both the
grounded and insulated radiator.

For radials I think you can get by
by using 5% longer than 1/4 wave.

The program is DOS based (Visual Basic for MS-DOS)
so it will run in DOS or Windows. It looks better in Windows
if you set program properties to full screen.

It's absolutely free and zipped in WinZip.

Jayarajan:
Just a quick reply here. Obviously you'll want an antenna system that is
as efficient as you can get. If you can't use beams, ie yagi type
antennas, there are good wire antennas that will do the trick.
I made my first QRP contact in 1975 when my cousin, not then licensed,
asked me to try out his new Heathkit QRP rig. I hooked it up to an old
14AVQ that had maybe 6 radials,and enjoyed an excellent CW QSO. When I got

my Argonaut 509 all I could put up was a 66 foot length of wire and end feed it. I didn't think it would work but, again, filled up the log book with some pretty good contacts.
My point is a lot of hams I meet are hesitant to try QRP because they don't have "a good enough antenna". Granted the first time I hooked up my Argonaut to my friends 7 ele beam I worked New Zealand, even modest antennas, i.e dipoles, loops, etc. will "get out". Operating technique will make up for some system shortcomings.
Good luck.

If you've read some of my other posts, you'll find that I
accidentally mistyped the subject of the text. I publically appologized
for my little boo-boo, and re-posted as "FS: pro-46.."
From the times on the origional postings, it was in the middle of
the night, and even though I double and triple checked the body, I
neglected to check the subject of my posting. Besides, I also own a '64
(which isn't for sale, and can not be modified) so this also contributed
to the slight confusion on my part.
I attribute my mistake mostly to my lack of caffeine at the time
of posting. :)

But it is a pro-46 for sale, and not a pro-64.

Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z JUNE 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 25 JUNE AND FORECAST FOR 26 JUNE - 28 JUNE
STATUS INDICATORS SOL:** YELLOW ** MAG:** YELLOW ** ION: GREEN

1A. SOLAR SUMMARY
Activity 25 Jun: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 25 Jun: 106/55

GOES satellite data for 24 Jun
Daily Proton Fluence >1 MeV: 3.9E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 2.70E+06 (normal)
X-ray background: B2.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 Jun 27 Jun 28 Jun
Activity Low to Moderate Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 Jun: 110/60
COMMENT: A solar region in the north east quadrant of the sun
is showing increased flare potential. A small shock was observed
in the solar wind near 1000UT on 25 June. This may be associated
with type II sweep observed at 0436UT on 22 June.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 25 Jun: Unsettled

Estimated Indices 25 Jun : A K
Learmonth 9 2322 1332
Fredericksburg 10
Planetary 11

Observed Indices 24 Jun : A K
Fredericksburg 13
Planetary 14 3323 3324

2B. MAGNETIC FORECAST
Date Ap Conditions
26 Jun 16 Unsettled to active

27 Jun 12 Unsettled
28 Jun 8 Quiet to unsettled
COMMENT: Geomagnetic field showed fluctuations 03-06UT and 17-20UT.
Active periods possible for today.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
25 Jun Normal Normal-fair Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
26 Jun Normal Fair-normal Fair
27 Jun Normal Normal Normal
28 Jun Normal Normal Normal
COMMENT: Mild degradation in high latitude HF comms expected for
today. Short Wave Fadeouts may be experienced on daylight HF
circuits.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
25 Jun 48

Observed Australian Regional MUFs:
mostly near predicted monthly values northern region.
Depressed 15-20% southern region

Predicted Monthly T index for June: 71

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
26 Jun 55 depressed 10 to 15%/near predicted monthly values
27 Jun 55 near predicted monthly values
28 Jun 60 near predicted monthly values
COMMENT: Spread F and blanketing sporadic E observed in southern
Australian New Zealand region overnight. Depression observed
for southern region yesterday. Mildly depressed conditions expected
for New Zealand region for first half of UT day.

Dear Patrick,

Eventually I hope you will consider washing yourself off. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you were under crap.
Please don't listen to those who talk as if they know your high-tech
career personally,
as I'm sure none of the things they say about your past is true. You,
with the proper guidance and care, can forgo your preceived necessity
to slog through fecal matter.
Hopefully you will take this is the spirit in which it is written and
close this dark brown chapter of your life and brighten your own white
clothes with some nice scented bleach and your
loved ones will return home as you move to the future.
Wishing you the best.
7 3

Anybody have smelling salts with them ???

If this guy is as goofy as he looks from the picture he posted then I can understand why his web sight is so disorganized. As for its content don't waste your time, it is simply a bunch of silly claims made by someone who evidently got took in a bad radio deal and is now taking it out on Amateur Radio.

Hi All

I have recently acquired an ancient Yaesu FT2700RH Dual Band 2m and 70 cm radio, which I would like to use for 9K6 Packet on TCP/IP using a G3RUH type modem TNC (but only on a temporary basis - I want to retain full audio functionality of the rig)

Does anyone have a modification sheet that shows where the necessary audio input and output taps should be placed, and a list of components/circuit diagram showing the modification? Any costs involved will naturally be reimbursed.

Thanks in Anticipation

Nigel Kendal-Ward

My news service here pretty much sucks. As a result of a very poor
feed, I didn't know that we were voting, so here is my vote [late as
it may be]:

Please eliminate ALL of the rec.radio.* newsgroups except
rec.radio.swap. With the exception of that one newsgroup, they are
all WORTHLESS as are most of the people who contribute to them.

Actually, a lot of poor urban Black men are getting their acts together because of Mr. Farrakhan. He often makes boneheaded remarks, and some that are rather alarming to cooler heads of all races, but his general message of taking charge and taking responsibility for oneself and family is worth listening to. Getting the urban poor off drugs, off welfare, and into jobs and stable two parent families is a worthy aim, and one beneficial to the working taxpayer and potential crime victim. Yes, he is indeed on record as making racist remarks. I say "So What?". He is on my side whether he knows it, or whether he LIKES it, or not.

Ok. Sorry I was so harsh. I understand now.

I actually bought my FT-50 via phone and mail too, but I'd already played with one owned by a friend first so I had some idea of what I was getting. And, at the time, it was one of the least expensive dual-band-capable radios available, while the dual-receiver dual-bands were all just too expensive.

These days, the choice would be harder, with 3 or 4 newer radios competing with the FT-50. The new Kenwood has many of the same physical features of the FT-50 (water resistant, battery on the back, etc) but the keys are large and lighted, fixing *my* worst complaint about the FT-50.

>I didn't hate it until it was too late. Wanna buy a spare ?

No thanks. I can't justify owning any more handhelds, unless I can convince my wife to get her license. (No luck so far).

Dave

Richard,
I assume you are refering to how to get out of band coverage. That being the case, here is how to do so.

Turn radio completely off.

Press "fast" and "lock" then turn radio on with "power" switch.

Re enter menu by normal means, "fast, then enter".

Using mem/vfo ch. knob turn to left one turn. You will see 9-9 selected. The main VFO will read whatever it is set to. The "t-select" will shop in sub vfo display.

Move the main VFO position until you see the word "GEn" (generator) displayed. Press enter to leave the menue.

You can now Transmit EVERYWHERE except down in the AM broadcast band and below.

Id suggest leaving the other settings alone.

Dan/W4NTI

Alan

My first suggestion is to go out and buy a Solarex SR8 - good for 8
amps and very reliable device. Try RFI as a source.

Or you could build your own, but if I showed you the Solarex schematic
you'd appreciate why it's good value to buy one. Unless the project
is to build a reg rather than get a repeater on the air.

So do the young. Most hams in my club are either in high school or college
and they keow or are in the process of learning the code. Unlike others they
are not sitting on their butts waiting for a handout. They are getting
involved and enjoying ham radio.

This subject came up on one of the reflectors and I thought it would
be interesting to throw it out to a larger group. Just how often
should coax be replaced as a matter of routine maintenance?? I have
a six year old run of very high quality RG-213 that tests just fine.
Should I replace when good wx is around as a matter of problem
prevention?? What is the collective wisdom on this subject from
really experienced people?

--- ---
PROBABLE SI ASSOCIATION : 70% ESTIMATED GLOBAL IMPACT: MINOR

ESTIMATED FORECAST PEAK PLANETARY 24-HOUR A-INDEX DURING STORM: 25 - 35
---- --------------

COMMENTS:

A second interplanetary disturbance arrived near 16:36 UTC on 25 June
and was associated with a sudden magnetic impulse over most ground-based
magnetic observatories. At the present time, the solar wind interplanetary
magnetic field (IMF) is strongly northward following the arrival of the
disturbance, which is promoting stable and quieter levels of geomagnetic
activity. However, there is a chance we may see some rotation of the IMF
into a more southward orientation over the next 12 to 18 hours. Should this
occur, geomagnetic activity could increase toward minor storm levels,
particularly over the higher latitude regions.

** End of Warning **

5799. AURORA WATCH: Updated Middle Latitude Auroral Activity Watch - 25 June

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-25 00:00:00 UTC

Source record: 168910
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH UPDATED: 17:00 UTC, 25 JUNE

/\

ACTIVATION: EFFECTIVE IMMEDIATELY
VALID UNTIL: 19:00 UTC ON 26 JUNE

HIGH RISK PERIOD: 25 JUNE (UT days)
MODERATE RISK PERIOD: 25 - 26 JUNE

PREDICTED ACTIVITY INDICES: 25, 18, 15, 10 (25 JUNE - 28 JUNE)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NONE

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN WASHINGTON STATE TO NORTHERN IDAHO TO NORTHERN OR
CENTRAL MONTANA TO NORTH DAKOTA TO NORTHERN MINNESOTA TO NORTHERN
WISCONSIN TO CENTRAL MICHIGAN TO DARK-SKY SITES OF EXTREME NORTHERN
NEW YORK STATE AND POSSIBLY DARK SKY LOCATIONS OF MAINE.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN UNITED KINGDOM TO EXTREME NORTHERN EUROPE INCLUDING
THE NORTHERN HALF OF NORWAY, SWEDEN AND FINLAND, TO NORTHERN
RUSSIA. EXTREME SOUTHERN REGIONS OF NEW ZEALAND MAY ALSO SPOT
PERIODS OF ACTIVITY.

SYNOPSIS...

A second interplanetary disturbance arrived at 16:36 UTC, producing a
sudden magnetic impulse at ground-base magnetic observatories. The leading
edge of this disturbance is associated with strongly northward interplanetary
magnetic fields, which will help keep auroral activity relatively quiet over
the next several hours. There is a fair chance the fields might rotate into
a more favorable configuration over the next 24 hours. If so, levels of
auroral activity could increase (possibly fairly substantially). The Middle
Latitude Auroral Activity Watch will remain active through 19:00 UTC on 26

June and may be extended beyond that if conditions warrant. The period of greatest activity will probably occur within the next 12 to 18 hours.

Users of the SWARM software should pay close attention to the realtime ACE spacecraft Bz data plots, which show the north/south orientation of the magnetic fields in the disturbance. Should the Bz trace drop below the zero level, expect auroral activity to become slightly more active. Should the Bz trace drop below -10 nT, expect auroral activity to become substantially more active.

PLEASE SUBMIT ANY OBSERVATIONS YOU MAKE OF AURORAL ACTIVITY TO:
http://solar.uleth.ca/solar/www/auroras.html

For realtime information regarding the status of the disturbance, and any other solar flares or terrestrial disturbances, consult:

http://solar.uleth.ca/solar/www/swarm.html

(the only software in the world that can reliably warn of disturbances) and associated auroral activity before they impact the Earth.

** End of Watch **

Thank you for your well thought out, articulate reply. I like the way you elaborate; the way you explain your argument in a resonable, logical manner. You have established credibility with your discerning mind and verbal skills; NOT!

Perhaps you LIKE seeing third-generation welfare families in the inner city. Maybe you WANT to see drug-dealing on street corners by healthy young men who could be working at honest jobs. I guess you PREFER that black kids, or in fact those of any other minority, grow up without the stabilizing influence of a father. And I suppose you are willing to pay for it all with your taxes. I am not. If we can put healthy people on the tax rolls instead of on the welfare rolls or in prison, so much the better. Farrakhan's more rational (one could perhaps say "less irrational") teachings serve this end. Christian oriented groups such as the Promise Keepers have essentially taken, as their own, Nation of Islam's tenets that coincide with the Christian agenda. Both groups are stressing the same thing: responsibility. They just happen to reach out to different types of people. And Farrakhan's message is tainted with racist overtones that most of us find disturbing. Still, he is instilling family values in young black men who would otherwise be unreachable, and I have to admit being in agreement with that.

I guess you will respond with an equally logical rebuttal to this as the last one? Let's address your problem with people going to work instead of to jail or onto welfare. That was my point, and you seem to take issue with it.

If you can make no logical case, you can expect this to be my final post on the matter. None will be needed, and I think my point will stand another irrational, ignorant, insubstantial, insult.

>course, you have to somehow get the signals from one radio to the
>other... The other solution is to install "duplexers" or "cavities",
>which are large (and expensive) devices that have extremely narrow
>bandpass and bandreject frequency ranges.

This shouldn't be a problem. I did a small test and moved the scanner (I
decided to use a scanner instead of another HT to pick up on the input
frequency) and the 2m antenna on opposite sides of the house, and I tuned to
an open pair of frequencies (yes, there are a few pairs of open frequencies
here in the metro area) and tuned my scanner both up and down .6 MHz from
the HT's frequency, and the scanner didn't overload when I had someone tune
the the scanner's frequency and transmit while I was transmitting on my HT.
I could hear them perfectly, so maybe it will work out.

>Problem #2 is that there are a few more requirements for a repeater to
>be in compliance with FCC regulations. You neglected to mention the
>repeater controller sending out an ID at least once every 10 minutes;
>there needs to be a "watchdog" timer that brings the system down

>operation of the repeater, especially the ability to shut it off from
>a remote location in the event that it malfunctions. And, of course,
>the ability to shut it down should (must?) be by a means OTHER than
>a signal transmitted by the control operator on the repeater input
>frequency, such as a modem to the controller PC, a separate "command
>channel radio" at least one band higher in the spectrum, etc. These
>things can all be accomplished one way or another, of course, and most
>of them are amenable to being done mostly in software, assuming that
>you are willing to devote a PC to this purpose full-time.

The ID of my repeater would be no problem - I would just need to send either a WAV file of my callsign or callsign in Morse code.

The "watchdog" would be no problem either. I would have a three-minute (you could set any amount of time, though) timer in my program that watches the "Transmitting" boolean variable, and if it stays "Yes" or "True" for more than the allotted time, it turn the sound card's Output off (mute it). I tested this, and when you have the sound card unmuted and have the HT plugged into the output, it transmits, but when it is muted, it stops transmitting.

For the remote control, this would be rather costly ($60, for me, a 15 year old), but it could be done. Here's a unique way: I could buy a Radio Shack home automation kit. They have a model which allows access to turn appliances on and off by phone, and I could have the repeater transceiver plugged into this unit.

>Problem #3 is that you need to find an open pair of frequencies to do
>this on, if you intend it to be anything more than an occasional short-
>duration experiment. That means an application to the local Repeater
>Coordinator. And in the Minneapolis/St. Paul metro area, you will not
>find an open pair of frequencies in the 2 meter band. Open frequency
>pairs are also rare to non-existent in the 70 cm band in this geographic
>area.

I'm sorry, but there are only 4 frequencies (or eight if you include both input and output frqs) in use in the 70cm band, so I don't know where you got your information.

There are also about 5 or 6 open pairs (no, I'm not including simplex-assigned frequencies) on the 2m band.

>I don't want to douse your enthusiasm completely, however. Do some

Thanks for the links to HamTronics and the TCRC Virtual Tour. I took the virtual tour, and I may become a Tech team member for TCRC. They have a very nice setup, and maybe they could help me out. Steve Filek (N0OWL) supports me in making my repeater!

>Good luck on your project!
>John (KB0ZEV)

Thanks, and I will let you know how everything works out!

If you know how to test your coax, why ever would you change it
before it's performance starts to deteriorate? If you've got too
much money, I think that problem can be solved in other ways :-)

I agree with Ed. I think if Carl was not blinded by his hatred of the ARRL, he could have asked for an expansion of the ARRL request that would have benefitted his digital agenda and ham radio in general.

Why not eliminate the FCC band plans and let amateurs set the limits for each mode in a band. This would allow us to dynamically set the limits for each mode as our usage patterns and needs change. We could set limits for new modes at will, without going through the FCC to do it.

But, as Carl alluded to in an earlier post, getting the current crop of hams to agree on anything appears to be next to impossible. Hopefully someday soon we will all grow up.

SB SPCL @ ARL $ARLX005
ARLX005 Fred Link, ex-W2ALU, SK

ZCZC AX05
QST de W1AW
Special Bulletin 5 ARLX005
From ARRL Headquarters
Newington CT June 26, 1998
To all radio amateurs

SB SPCL ARL ARLX005
ARLX005 Fred Link, ex-W2ALU, SK

Two-way radio pioneer Fred M. Link, ex-W2ALU, of Pittstown, New Jersey, died June 18. He was 93. Link was best known for his role as a maker of two-way radio gear used extensively by police departments and public service agencies and by the armed forces during World War II. He founded the Fred M. Link Company (later Link Radio Corporation) in 1931 and became a fixture in the industry. Beyond that, he was a man of wide-ranging interests, from running a horse farm to being involved in local government, once serving as mayor of Westwood, New Jersey.

Link served as president of the Radio Club of America from 1968 until 1992. Among other honors, the club awarded him its Sarnoff Citation in 1976 and its President's Award in 1996. Link was a fellow of the IEEE and a founding member of its Vehicular Technology Society. He had served as a member of its board of governors since 1975. The IEEE honored Link with its Centennial Medal in 1984. Early in his career, Link worked for the De Forest Radio Company as assistant chief engineer for the manufacture of transmitting tubes.

Link has said that his early experiences with ham radio helped him to become the leading manufacturer of police radio gear in the 1930s and 40s. He learned Morse code for a Boy Scout merit badge and, during World War I, worked as a relief railroad Morse operator while only 14. He was first licensed as 3BVA and later became 2ALU and finally W2ALU. As 2ALU, he and his friend Johnny Knight, 4DX, were in contact with the Byrd expedition to the South Pole and helped to relay news of the expedition. The pair also shared other ham radio adventures, including a notorious episode where they managed to get themselves evicted from a New York YMCA while operating a station from there for the 1927 ARRL DX Contest because they were interfering with local radio reception.

Link's wife, Mildred, and a daughter, are among his survivors.
Contributions to the Fred M. Link Scholarship Fund are welcome to The
Radio Club of America, 3 Caro Ct, Red Bank, NJ 07701. (Our thanks to
Don Bishop, W0WO, for this information.)

Dear D.Rea ... I am the Sr. Electrician for a "Major City" Fire Dept. I work on electrical systems of every thing the F.D. owns that moves ... fire trux, cars, ambulances, fire baot, airport "Thing" ect.

I can tell you from personal knowledge and experiance ... Don't put that much shit n a taurus... we have several taurus' in our fleet as hand-me-downs from the police dept. we use them strictly for office people cars cuz' that's all their good for, if that.

a typical lightbar with halogen spinners pulls a good 30A by itself, the police radios we use pull 20 amps when keyed, and about 10 on standby(we have 3 radios in each veh, one voice, one computer terminal, one vehicle locator system) this shit pulls.

you will not be able to make a taurus into an ambulance for first response use, it will not meet federal specs, I have a copy and it calls for a truck tierh type 1, 2 or 3 . we use type 1, a P.U. with a module on the chasis where the bed would be. type 2 and 3 are vans.

for the main power feeds to all that shit, or at leat to the main relay center you have to use a minimum of #6 wire, for a short run, to the trink, maybe a zero guage... or the wire will drop too much voltage.

typically the alternator is only 65 amps and cannot handle all that shit at idle and it will run your battery down.

We have 240 Amp alternators in our ambulances and we still have to put on a high idle device of somekind so the alternator can keep with the demand, if the medics don't put on the high idle device while at ascene or at the hospital, they run the batterIES down .... notice the emhasis on Dual batteries, high performance 800 CCA and 850 CCA batteries, Group 65s in fords and 78DTs in chevies... the chevy ambulances actually have 2 110Amp alternators connected in parralell... when 1 goes bad the extra loads soon kills the other one.

Take my advice, if all you have available for a veh. is that ford car, get just a red Kojack light and an electronic siren (if allowed by your states laws governing YOU), and use a portable radio that has a car charger unit. Don't go overboard with too many lights or other stuff or you will kill your batteries and your alternator, repeatedly.

> .....MAYBE as much as six amps, but sixty? Come on.

Ok Kids let's add up some "average"numbers, Ign system 10 to 15 amps, + headlights 15, all other running lights, as much as 10, in dash air blower (heat& A.C.) 15, AC clutch 10, stereo as much as 5, = close to 70 amps, and that's just the civilian shit. 35 Watt halogen lamps (typical for scene and flashers) - 2.5Amps Each, typical instrallation uses 8 (8*2.5=20) 20, motorola police type radio, 25 Amps when keyed, whelen 100 W. siren amplifier 10, 100W halogen spot lamp - 8, we won't add the module lamps, suction unit or any other electrical stuff unique to an ambulance module since this is a car, what do we have .... 63 additional amps (using just 1 radio - our medics have 3 not counting the ALS radio that's a 4th one) ... 63+70=133Amps ....the power adds up.

Keep in mind that Not even the big alternators on Real ambulances and fire trux keep up this kind of load at idle, a high idle device is a must to run this much shit. which brings us the the next point

> As I said before; the alternator is not this guy's problem.
> Wiring may be. A second battery will solve all his worries easily.
> It should be a cycle-service unit, not a car-starting one.

Our ambulance have dual high capacity batteries, the fords have 2 group 65s .. 850 CCA 150 reserve minutes, the chevy ambulances have 2 group 78DTs, 800CCA 180 reserve minutes....that average consumer car battery has about 100 to 130 reserve minutes. reserve minutes is the very important consideration for this type of use. our rescue squads and many fire trux have 31S-1000 batteries 1000 CCA - 240 Reserve minutes. I'm pushing to get 1000s in the medix....in an external module compartment.

Average cars have 90 amp alternators. Police cars have 110AMp alternators, the police lightbars pull around 25-30Amps depending on what kind they are, the siren allows for about 10, and the spots (2) allow for another 20 Amps. the police package adds about 60 Amps to the

cars normal load ...

Keep in mind that (at least in my city) the police have yards full of extra cars so if htey run the batteries down (or any other problem) in one car they just have it towed in and grap a different one.
The fire dept (in our town) dosn't have that many Extra vehicles at our disposal and have to make the stuff last.

hope this enlightens.

5820. Re: Coax Maintenance?

In 1986, I buried five RG 59U coaxes in the sand, 100 feet up the hill to my television receiving antennas. Each coax had 15vdc running up the center conductor to power individual antenna amplifiers.

At this point, 12 years later three of the five are dead; one is functional but lossy and the last coax is fine.

The three dead ones show the effects of electrolysis.

I think the fault sequence has been: rodent bites the cable; rodent gets shocked and quits but leaving a hole in the plastic; water ingress; then electrolysis destroys the shield and the amplifier being unpowered from that point, stops working.

The replacements which I will put in any day now, will be in conduit.

My point is a lot of hams I meet are hesitant to try QRP because they don't have "a good enough antenna". Granted the first time I hooked up my Argonaut to my friends 7 ele beam I worked New Zealand, even modest antennas, i.e dipoles, loops, etc. will "get out". Operating technique will make up for some system shortcomings.

Likewise, my first DX contact on six meters (SSB QRP) was N. Dakota from the S.F. Bay Area, and that was on a homebrew 2 element quad (my first NEC2 designed antenna). Patience paid off, as i was on the bottom of a pile-up. But i haven't had enough experience on '6 to say much or compare with other bands. Nor do i have no idea how good an antenna it is. But at least it's got a decent SWR and has already gotten me some nice contacts.

I can comment on satellite operation, though. I'm also currently operating QRP on AO-27, routinely talking to Canada, Texas, and beyond. I just began this a couple weeks ago, so i haven't tried any sked's yet. It is certainly a challenge (and i won't bother trying on weekends), but it's also lots of fun and beats the heck out of not opeating, waiting for the "right equip-ment", or spending alot of time on setup.

If i was you make the cable 16mm fused at say 80a.welding cable is good
as multi stranded and flexible.preferably have a slave battery with a
blocking diode(100a).If the system needs to be run for a long time get a
heavy duty alternator to back it all up with.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z JUNE 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 26 JUNE AND FORECAST FOR 27 JUNE - 29 JUNE
STATUS INDICATORS SOL:** YELLOW ** MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 26 Jun: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 26 Jun: 109/59

GOES satellite data for 25 Jun
Daily Proton Fluence >1 MeV: 2.0E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 1.20E+06 (normal)
X-ray background: B2.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Jun 28 Jun 29 Jun
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Jun: 110/60

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 26 Jun: Field was unsettled until
0300UT when minor storm levels were reached. Field then declined
in activity until 1100UT when minor storm levels were again
reached. Activity declined by end of day.

Estimated Indices 26 Jun : A K
Learmonth 23 5445 3222
Fredericksburg 35
Planetary 45

Observed Indices 25 Jun : A K
Fredericksburg 10
Planetary 10 2322 1233

2B. MAGNETIC FORECAST
Date Ap Conditions
27 Jun 13 Unsettled

28 Jun 8 Quiet to unsettled
29 Jun 8 Quiet to unsettled
COMMENT: Minor storm periods believed associated with type II
sweep (CME) observed on 22 June.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
26 Jun Normal Fair-normal Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
27 Jun Normal Normal Fair-normal
28 Jun Normal Normal Fair-normal
29 Jun Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
26 Jun 85

Observed Australian Regional MUFs:
initially mildly depressed then most sites experienced
15-30% enhancements during the interval 04-09UT,
in response to geomagnetic activity.
Spread F observed local night hours.

Predicted Monthly T index for June: 71

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
27 Jun 60 near predicted monthly values
28 Jun 60 near predicted monthly values
29 Jun 60 near predicted monthly values
COMMENT: No depressions were observed after local dawn this
morning in the region following geomagnetic activity.

Gary, I have seen 1944 RG-8 coax that was still OK. I usually test the losses at the operating frequency. If you can't to that, give it a good visual inspection, looking for any cracks or holes in the outer jacket. The usual problems are caused by moisture entering the cable at the connectors. If in doubt, cut off the connectors and replace them. Wrap the outdoor connector in a water proofing substance (RF putty etc). Quality coax should last for many years, when properly installed. Don't use tight tie wraps, and don't let the coax dangle from a tower, or make it support it's own weight over a long distance. It will stretch and distort. Use some form of support. Stuart K6YAZ

I love the flagpole vertical, I've tried to talk a friend of mine who is concerned about the regulations in his trailer park to try this. Any dipole or inverted Vee will work fine, along with the vertical.

>
>
> 2. I would like to put as low loss a transmission wire as possible (cost

> this too long for 3W CW ? Should I restructure my shack to shorten the
> cable length ?

I doubt you'll see much REAL difference between 213 and plain vanilla RG-8, in an emergency once I replaced mine with 100ft of 58U from Radio Shack and could tell no difference from a practical operating point of view although I'm sure you could have measured greater loss I really think it's negligible.

> 3. Do I need a 1:1 balun if i use a inverted V antenna with the above
> mentioned cables ? Can I just use a connector and hook up the cable
> directly ? I am asking this from the point of view of loss.

Never used one, although there is a mismatch between 52ohm coax and a 72 ohm dipole, again, the loss is very small.

> 4. Is there a lot of activity in the 80 m band in CW QRP ? Is it worth
> considering designing a shortened 80 m antenna ?

Yes lots of QRP on 80 and 40, although I suspect they'll be temporarily abandoned with increased MUF to 15 and 10m.

> 5. How do wave (antenna) traps work with 3W CW for multiband antennas
> (like inverted V) ? Has anyone used a wave trap for QRP successfully ?
> Where can I get details to build wave traps (I have never built wave
> traps so detailed instructions will help) ?

I looked into that but had several talk me out of it in favor of a multi-element dipole, basically just make dipoles for 40/20/10 the 40 will resonate on 15 with a little help, I spaced my elements out using small dia. PVC. I don't know how easy it is to adjust a dipole with traps but the multi-element dipole was a snap, tuned each element with no interaction between bands, Im not sure if it's the same for a trap dipole.

>
>
> 6. I have a radio shack portable communications RX. Has anyone used this

> freq. QRP TX and use the radio shack RX ? Has anyone tried this setup ?

You can absolutely do that, just remember you'll need an antenna switch if your going to use the dipole into the RS RX. I still have an old RS 150B, that and an old 1 tube homebrew on 40 works just fine.

You might want to visit my site and download an antenna
program that I wrote. It is nothing real fancy but has some
not so standard wire and vertical antennas in it. One is for
a shortened antenna .. 75 meters at about 105 feet vs the
normal 120 or so.

Don't bet the bank on that news report. The report was made by the Khmer Rouge, the film of the body was made by the KR, and the body was cremated by the KR before anyone outside their bloody organization could view it. It will never be confirmed that the body was actually Pol Pot.

For those whose SE Asian history is a bit weak, Pol Pot and his Khmer Rouge were responsible for the murder of two million Cambodians (out of an original population of seven million) between 1975 and 1978. Their goal was to kill every Cambodian with any education at all - especially targeted were doctors, professors, teachers, anyone who wore eye glasses, and eventually, everyone over the age of 12. To add insult to injury, the UN recognized the KR as the legitimate government of Cambodia. Viet Nam was widely condemned when they invaded Cambodia to purge the KR and their murderous reign, but to the surviving Cambodians, the VNese were liberators.

Hundreds of books have been written trying to make sense of that dark period, three of which immediately come to mind: "The Year Zero" (the KR reset their calendars in 1975 to read Year Zero), "The Stones Cry out," and "To Kill You Is No Loss" (the KR's motto was "To keep you is no gain, to kill you is no loss"). These autobiographies make one realize just how strong the sense of survival is even after your whole world (including your entire family) has been destroyed.

Carl, but I tell you what; if you can declare that MY personal comments represent ARRL position, I can declare that YOUR personal comments represent NCI policy, with just as much validity -- none! It may suit your "spin" do so, but you are just plain off base. There is a big difference, though -- I cannot affect ARRL policy in anything other than the ARRL Lab, while you are in a position to affect NCI policy across the board, as an appointed Director.

There is a big difference between questioning someone's right to comment and questioning the nature of those comments or questioning driving forces behind them. Seeing that I never questioned anyone's right to comment (those words appeared only in your post, Carl . . .), I will ask you how YOU dare to question anyone's right to question the comments people DO make before our regulatory agencies. Are you really offering that no one should have the right to question ARRL, or NCI, when comments are made. Strange, Carl; strange . . .

> I'm sorry, but you guys are a total bunch of hypocrites!!!

Why, because I point out that the number of clubs calls that Mike Deignan may have has no significant bearing on the current state of amateur radio. That is what I meant. I can clearly see what you twisted it into. It does not escape my attention that the twist you chose perfectly fits your PERSONAL agenda of attacking ARRL at every opportunity. I would have to conclude that either you view everything through anti-ARRL eyes and just can't imagine any other interpretation of my words, or you do know what I was saying and chose to twist it to fit your own views. Either way, I believe that you are wrong, and whether you did what you did out of incompetence or malice is really irrelevant; you missed the mark by a mile.

I participate in a number of group efforts, Carl, and in all of those group efforts, people listen to each other's words and use them as a way of reaching a common understanding. I am just not used to dealing with people on the level where they are far more interested in twisting what people have to say into "debating points" than they are in the outcome of the discussion . . .

> The ARRL makes a big show of "rallying the troops to defend 440" then

> our of 4 US hams have refused to join the ARRL ... you guys really
> have a serious case of denial going on WRT your problems and your self-
> perceived level of "importance" and "greatness" are considerably
> exaggerated.

Carl, I realize that you think Jon and I are one person, but we are not. I have not criticized NCI for filing on the LMCC; I don't recall mentioning it in any of my posts. Jon really didn't either, he just pointed out that NCI has claimed to be a single issue organization, but that they are filing in other areas. He never said you shouldn't have done it; he never
"questioned" your right to do so and the "insinuations," to borrow from a few of your other posts, exist mostly in your imagination. I happen to disagree with Jon; I fully understand why NCI, or any group, would file on an area that includes spectrum protection. Again, Carl, in your haste to make ARRL look bad in any way you can, you flamed someone for something they didn't do. Want to say that you are sorry? I will accept your apology.

Gosh, Carl, if ARRL "resents anyone who represents anyone but our members," why would we encourage hams to file comments on all sorts of issues? If you really think that Jon Bloom discussing on a single USENET newsgroup that in his humble O, NCI has gone past what its stated charter is represents the policy of ARRL to stifle non-member comments on FCC matters, you have a much better imagination than most. I tend to think that you know better, Carl, and that you are, once again, choosing the worst possible interpretation you can think of and trying to convince the world that ARRL intended it that way. Sorry, Carl; once again, you missed the mark.

No, Carl, 3 out of 4 hams have not "refused" to join ARRL. More than 99 out of 100 hams have "refused" to join NCI. Yup, it is just as incorrect when I say it as when you said it. In reality, there are a lot more reasons that people don't join an organzation other than fundamental disagreement with its policy.

> Yes, NCI only has something on the order of about 700 members at
> present, but we are growing rapidly. Yes, the ARRL has about
> 170k subscribers ... er, "members" ... but that DOES NOT give you

> a monopoly on the right to comment to the FCC.

I have to wonder how many ARRL members we would have if membership is free. . . I also note from the NCI web page that NCI members are members for life. Care to compare the percentage of NCI members who are committed enough to write a check for the cause every year vs the percentage of ARRL members? Perhaps that would be a fairer comparson.

I do not believe that ARRL feels it has a monopoly on the right to comment to the FCC, nor would I ever think it should. The only evidence I have ever seen offered is your noting that Ed Hare said in a post on RRAP that he would want to look closely at any organization that comments to the FCC. Go ahead, use deja news and find one single instance where I have said that ARRL should have a monopoly on anything. In fact, you will find a number of instances where I pointed out that ARRL is not, and should not be, a monopoly. I am sorry that it doesn't fit your "spin," Carl, but again, you missed the mark. . .

To get back to the matter at hand, to quote myself, I WOULD and SHOULD, IMHO, ask questions about any organization that files comments before the FCC. IMHO, we ALL should do so, including asking those questions of ARRL (I know I sure do in a number of cases, and we all have seen you do so on this forum, again and again. . . Has anyone ever asked you how YOU dare to criticize? Not, me, Carl, even when I disagree strongly with what you have said.) Once comments tot he FCC are filed, they can affect all of us and we all have a right to take as close a look at them as we choose to do. When people do with NCI, however, I note that your implications are that they have "no right" to do so. When I asked questions of NCI, you proclaimed (rather loudly, as I recall) that I was making "insinuations" and attacks against the organziation. I must admit, I was quite surprised at how easily you see criticism in simple questions.

Let me first make clear that what follows is my personal opinion. (It is all personal, but I want to make this one crystal clear to all) Carl, perhaps it is time to explain that I am not against the general principles that NCI represents. I asked the questions I initially asked to truly determine if I should support NCI with my membership. Your answers, and public riducule of me for my "attack" and "insinuations" gave me all the answer I needed. This was strengthed when I saw on NCI's web page that the only way I could join is by affirming that I believed that Morse code testing should be elmimated for ALL amateur license testing. When I inquired of this and whether people could join NCI in an attempt to change its policies, it was made pretty clear by you and others -- "Have it our way, or go somewhere else." I have other concerns about NCI, and choose not to air them here. But suffice it to say that I have chosen not to join the organization, for my own reasons. If an organzation is ever formed that is a better match to working toward the compromise I believe should be the end goal of change, for the nonce, anyway, I will consider joining it. I do hope, however, that its leaders and members don't decide that they can be mean

to me because I happen to work in the ARRL Lab and that my working for ARRL automatically means that any questions I ask represent an organzational attack on their goals. Gosh, Carl, if ARRL ever did that to those who question ARRL, you would lead the howls of protest. . .

And you really shouldn't expect that the actions of NCI, its goals and organization should not be subject to public discussion and even criciticsm. I have noted that, when it occurs, you leap to its defense and are not unwilling to do and say whatever is necessary to stifle that criticism, or even pronounce that even people who have made it crystal clear that that they are speaking personally have "no right" to cricticise.

And, Carl, I hate to break this to you, my dear friend, but your opinion does not set the limits on anyone's rights. ARRL HQ staff are part of the ham radio world and are interested in participating in the action, too. To that end, some of us do participate on RRAP, some of us are active in local clubs and are generally interested in ham radio. If ARRL HQ staff set themselves apart from the rest, you would lead the howls of protest, Carl. yet when we do, you try to twist anything we have to say to mean ARRL policy, or, in general, to make ARRL look bad. Doesn't seem fair, Carl, does it? You have stacked the deck so that no matter what we do, no move is right and you can declare yourself the winner at any time.

> I'm REALLY fed up with your two-faced, hypocritical, pompous BS.

Carl, I am quite willing to let people decide for themselves whether I am two-faced or not. Although not everyone agrees with what I have to say, I bet you a cup of coffee, or a lobster lunch, that 3 out of 4 people would "refuse" to join you in your conclusions. :-) I, too am tired of some of what I encounter on this newsgroup, Carl -- the profanity, the insults, the innuendo, the double standards. people twisting each others words intentionally into things that I really think they knew better that the other fellow didn't mean. . . It is all pretty bad and it is all pretty useless, IMHO. I agree with Bill Sohl; we really gotta' find a way to get ourselves back on the track of really communicating toward common solutions.

5836. Repeater in USA ???

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-26 00:00:00 UTC
From: Thomas Schmidt <th.schmidt@ndh.net>
Message-ID: <6n044p$6ue$1@public.ndh.net>
Source record: 168780

Hi All,

I will visit the USA at the first time on July, 11th 1998 an take a little
FM transceiver with me.
I want to know, how i have to operate a repeater on 144MC and 430MC. I heard
something about some Audio sub tones.
In Germany normally you open the repeater with a 1750 Hz tone for 1 second
and then you can speak. The shift at here is -600Hz.

Please give me an answer.

5837. N.E.R.D.S. on Field Day as W3A !!

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-26 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <6n07gs$6q8$1@copland.udel.edu>
Source record: 168781

The N.E.R.D.S., Delaware's defending Field Day champs, will be back this June from New Castle County, Delaware.

Field Day is the largest single event during the year in amateur radio. It is an emergency preparedness exercise, public relations event, contest, picnic and more. Up to 40,000 amateurs in North America take part each June.

The N.E.R.D.S. will be entering the 1A Battery class as usual, using the special event call sign

W3A

Field Day is June 27-28, and the N.E.R.D.S. will be on the air from 1800Z (2 PM) Saturday to 1800Z (2 PM) Sunday.

For further information, e-mail to n9gg@dxer.com. Thank you.

Go N.E.R.D.S. !!

5838. Re: ARRL hipocrites ... my PERSONAL reply to Ed Hare's comment

> accept your apology.

Let me clarify my point, since I think Ed's statement of it is slightly
different from what I mean. Had NCI commented only on RM-9267 (the LMCC
business), I probably wouldn't have said anything. But the combination
of their comments on that and on RM-9259 suggest the development of a
pattern, whereby NCI intends to file on every ham-radio issue that
arises before the FCC. Of course, two cases don't prove a trend, so
we'll have to wait and see. It's possible that these two proceedings are
exceptional cases, with RM-9267 being a case where every amateur
organization extant files against the LMCC request and with RM-9259
giving NCI an excuse to attack ARRL. Maybe the next significant
non-Morse testing related proceeding out of the FCC will be one that NCI
chooses not to respond to.

The point would be moot if NCI stated that their activities will embrace
all of amateur radio rather than saying they are interested only in the
removal of Morse testing.

I stand corrected, humblest apologies. Here's the message with the
correct date:-

The 5th Annual Eagle Wing Festival celebration will be taking place
in Groomsport Co. Down, Northern Ireland, on Friday 3 July and
Saturday 4 July 1998.

Back in 1836, The Eagle Wing sailed out of Groomsport taking 140
Presbyterians in search of a new life in the New World. Although they
did not reach their destination and were forced to return home after
two months at sea, The Eagle Wing was the spark that lit the flame of
emigration to the New World. Since then several million people have
left these shores, taking with them their culture and traditions.

The Eagle Wing Festival will focus on how we have influenced American
culture and how new traditions have returned across the Atlantic to
influence out present day society and the lifestyles we share.

Bangor & District Amateur Radio Society (BDARS) has been approached to
provide an exhibition amateur radio station - particularly to contact
stations int he USA.

Anyone who would like to make a sked or help to operate the station
should contact GI0SSA (gi0ssa@geocities.com) as soon as possible.

The callsign in use will be GN3XRQ/p (GI Club call for BDARS).

Further details about the festival can be obtained by phoning +44
(0)1247 270371 Ext 8110.

Many thanks for reading this,

Keith Stevenson

.....MAYBE as much as six amps, but sixty? Come on.

As I said before; the alternator is not this guy's problem.
Wiring may be. A second battery will solve all his worries easily.
It should be a cycle-service unit, not a car-starting one.

Here in the US some repeaters use PL tones also known as CTCSS tones they range from around 60.7Hz to 254.1Hz.

The best thing to do is pick up an ARRL repeater directory. It provide much useful information.

That's right. The Nazis rounded up all those jews & gypsys & blacks
because there was no 2nd amendment in Germany to protect their right
to keep and bear arms. At the same time, on the other hand,
Japanese-Americans in California were able to escape internment
because of their 2nd-amendment protection. Forty years later, the
heavily armed Branch Davidians stood up for their rights, and showed
the out-of-control federal government a thing or two about the
value of their 2nd-amendment rights.

Right. Pull the other one. Just don't pull it in this newsgroup,
where gun nuts are always off topic...

>long wire antenna along the gutters on my house. A flagpole vertical is
>also a possiblity. So my question, what would be a good ant for QRP from
>the types above and any related designs?

The inverted Vee will be better than the other two. A wire beam or a regular
tubing yagi will be better still, of course. The former can be cheap, the latter
can be aimed. Both work. Verticals are always a problem, more so for
QRP because of ground losses. Avoid them if you can, elevate them if
you can't.

>2. I would like to put as low loss a transmission wire as possible (cost
>permiting). The local ham store sells RG213 for .36 per foot and LMR400
>for .59 per foot. Is the LMR400 worth it over RG213 as far as QRP work
>is concerned ? Also I am estimating a cable length of about 50feet. Is
>this too long for 3W CW ? Should I restructure my shack to shorten the
>cable length ?

At HF, feeder losses are generally low enough to be ignored. The real
issue is power handling, and with QRP that isn't an issue either. Plain
RG8 will be fine, even RG58 will be Ok if the SWR is low. But if you
want a really low loss line, at virtually any SWR, then use ladder line.
It's pretty cheap in window line form, and you can build your own in
open line form. For QRP, even TV twinlead will work.

>3. Do I need a 1:1 balun if i use a inverted V antenna with the above
>mentioned cables ? Can I just use a connector and hook up the cable
>directly ? I am asking this from the point of view of loss.

A proper 1:1 choke balun will introduce virtually no loss, and will make
all of your signal radiate from the antenna rather than from the feeder.
Since the antenna will almost always be a better antenna than the feeder
is, this is a no brainer, use the balun.

>4. Is there a lot of activity in the 80 m band in CW QRP ? Is it worth
>considering designing a shortened 80 m antenna ?

80m QRP is *tough*. Lots of QRN, and efficient antennas need to be large and mounted *high*. I'd suggest you stay nearer the MUF when operating QRP. Your skywave signal will be stronger, and noise will be lower.

>5. How do wave (antenna) traps work with 3W CW for multiband antennas
>(like inverted V) ? Has anyone used a wave trap for QRP successfully ?
>Where can I get details to build wave traps (I have never built wave
>traps so detailed instructions will help) ?

I wouldn't use a trap dipole. They're finicky things to tune up. Go with a fan dipole or use ladder line and a tuner with an ordinary doublet flattop.

>6. I have a radio shack portable communications RX. Has anyone used this
>radio for QRP RX. Can I just build a simple crystal controlled fixed
>freq. QRP TX and use the radio shack RX ? Has anyone tried this setup ?

Yeah. You can do it, but you'll very quickly wish for a better receiver. The RS SW receivers are plenty sensitive, but they lack good selectivity and overload immunity. On a crowded band, they'll tax your operating skill to the limit. On a nice quiet band like 30m, they may do just fine. (30m is an excellent QRP band. Atmospheric noise is pretty low, QRM usually isn't very bad, and everyone is restricted in output power so you aren't such a little gun.) The RS receiver will probably tax you pretty severely on 40m, and during contests on 20m.

I have a TM-261A that has not been used very much. I bought it, and it sat in the box for quite sometime, I finally mounted it in my car only to have to take it out a week later because my car died. It has been back in the box ever since. The radio is in great condition!! I haven't used much at all. I have all the original parts for it (i.e. backlit mic, mounting bracket, power cable, etc.) I know what the new ones are going for so, I am asking $200 for this one. The radio is really clean. If you are interested or have questions please E-mail me as I do not check the NG often. Thanks.

==>CONTINUED<==

RAC ADVISES MEMBERS TO REJECT LICENSING CHANGES

Radio Amateurs of Canada is advising its members to just say no to Industry Canada's plan to drop Amateur Radio license fees and combine operator and station licenses. RAC says the plan lacks provisions to adequately track call signs, station locations, and operator qualification levels. RAC also says IC--Canada's equivalent of the FCC--has been unable to answer specific questions about the plan.

"Industry Canada's proposal is viewed as another step by the Department to lessen its involvement in regulation of the Amateur Service," an RAC bulletin declared on June 5. "In recent years, Industry Canada has reduced surveillance and enforcement activities to a virtually ineffective level."

Expressing fears of "chaos" ahead, RAC concludes that eliminating the license fee and merging the license documentation "would lead to a further decline in the status of the Amateur Radio Service."

Late last year, the IC scuttled negotiations to delegate partial authority over Amateur Radio licensing in Canada to an arm's length organization associated with RAC. There are approximately 45,000 hams in Canada.

MORSE TO HAVE CIVIL WAR RE-ENACTMENT ROLE

Morse code will play a role in the 135th recreation of the Battle of Gettysburg over the July 4 weekend. Walter Mathers, a member both of the Morse telegraph club's Washington, DC, chapter and the Signal Corps Association 1860-1865, has been appointed Chief Signal Officer for the event, July 3-5, 1998. The Signal Corps Association has formed a re-enactors' division.

Mather says the wire portion of the communication system will include Morse instruments manned by individuals using both the American and Continental codes. "We expect this event to produce over 100 full scale pieces of field artillery--many horse drawn--plus the largest total number of participants ever, which will include the most telegraphers ever assembled at such an event," he said. Mather said 20,000 participants are expected to turn out for the re-enactment, most in period attire.

Mathers, who is not a ham, said that a Morse Telegraph Club member has developed a hidden earphone and converter box to translate the clack of the Morse sounder or relay into a tone for use by wireless operators. "In fact, we'll have more Continental ops than American ops working the lines," he said.

A picture of Mathers (and others) re-enacting the reception of Samuel F. B. Morse's famous message, "What hath God wrought?" appears on page 12 of the August 1991 issue of QST.

SOLAR UPDATE

Solar seer Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was lower again last week, and geomagnetic indices were unsettled. The average solar flux for the previous 90 days dropped one point from 108 to 107, and the solar flux for every day last week was lower than those figures. This is not a good indicator for an upward trend.

Over the next week the solar flux is expected to rise, reaching 115 from this weekend until the July 4 weekend. The flux should go below 110 again around July 10.

June 26 through 28, Field Day weekend, the solar flux is forecast to be rising, at 110, 112 and 115. Over those same days look for unsettled conditions on June 26 with a planetary A index around 15, and then an A index of 8 over the next two days. It looks like fairly good conditions for this Field Day weekend, with the solar flux about 40 points higher than the 1997 Field Day.

Many readers of this bulletin use the WA4TTK Solar Data Plot Utility by Scott Craig. It grabs data from this bulletin, stores it in a database, then plots the data for you. Users had problems grabbing the data from the past two bulletins due to some inadvertent changes in wording. Scott has released version 3.03 which fixes this problem, and you can download it from his homepage at http://edge.net/~scraig/index.html.

Here are some path projections for the Field Day weekend.

From the East Coast to the West Coast: Check 80 meters from 0230 to 1030 UTC, peaking around 0430 to 0900 UTC. Forty meters should be good from 0030 to 1230 UTC, and peak from 0400 to 0930 UTC. Twenty meters should be open around the clock, with conditions slowly getting better in the evening until 0500 UTC. Fifteen meters may open around 0300 to 0500 UTC.

From the East Coast to the Central US: Check 80 meters from 2300 to 1230 UTC, with excellent signals around 0930 UTC. Forty meters looks good around the clock, peaking from 0100 to 1000 UTC.

From the West Coast to the Central US: Eighty meters looks good from 0215 to 1230 UTC, peaking from 0530 to 1000 UTC. Forty meters is open all the time, but best conditions are from 0400 to 1030 UTC. Twenty meters is best around 2300 to 0800 UTC and 1100 to 1530 UTC. There may be some 15 meter openings from 0330 to 0530 UTC.

From the Pacific Northwest to the Southeastern US: Eighty meters looks good from 0030 to 1100 UTC, and 40 meters from 0030 to 1300 UTC. Twenty meters looks promising from 1500 to 0600 UTC and around 1230 to 1300 UTC.

Don't forget to check 10 meters for sporadic E skip.

Sunspot numbers for June 18 through 24 were 68, 67, 80, 87, 64, 59, and 64 with a mean of 69.9. The 10.7-cm flux was 100.1, 101.2, 101.1, 102, 100.5, 95.7, and 105.3, with a mean of 100.8. The estimated planetary A indices were 7, 14, 14, 15, 10, 10, and 14, with a mean of 12.

TWO-WAY RADIO PIONEER FRED LINK, ex-W2ALU, SK

Fred M. Link, ex-W2ALU, of Pittstown, New Jersey, died June 18. He was 93. Link was best known for his role as a maker of two-way radio gear used extensively by police departments and public service agencies and by the armed forces during World War II. Beyond that, he was a man of wide-ranging interests, from running a horse farm to being involved in local government. He founded the Fred M. Link Company (later Link Radio Corporation) in 1931. The first FM police system, built by Link Radio, was installed at the Connecticut Department of Public Safety headquarters. Link served as president of the Radio Club of America from 1968 until 1992. Among other honors, the club awarded him its Sarnoff Citation in 1976 and its President's Award in 1996. Link was a fellow of the IEEE and a founding member of its Vehicular Technology Society. He had served as a member of its board of governors since 1975. The IEEE honored Link with its Centennial Medal in 1984. Early in his career, Link worked for the De Forest Radio Company as assistant chief engineer for the manufacture of transmitting tubes.

Link has said that his early experiences with ham radio helped him to become the leading manufacturer of police radio gear in the 1930s and 40s. He learned Morse code for a Boy Scout merit badge and worked as a relief railroad Morse operator while only 14. He was first licensed as 3BVA and later became 2ALU and finally W2ALU. As 2ALU, he and his friend Johnny Knight, 4DX, were in contact with the Byrd expedition to the South Pole and helped to relay news of the expedition. The pair also shared other ham radio adventures, including a notorious episode where they managed to get themselves evicted from a New York YMCA while operating a station from there for the 1927 ARRL DX Contest because they were interfering with local radio reception.

Link's wife, Mildred, and a daughter, are among his survivors. Contributions to the Fred M. Link Scholarship Fund are welcome to The Radio Club of America, 3 Caro Ct, Red Bank, NJ 07701.--many thanks to Don Bishop, W0WO

In Brief:

* This weekend on the radio: Field Day! See May QST, page 108, for details. Just ahead: The Canada Day Contest is July 1. The CN-DX Contest is July 4-5. See July QST, page 98, for details. The IARU HF World Championship is July 11-12. See April QST, page 109, for rules. Also the weekend of July 11-12: The QRP ARCI Summer Homebrew Sprint and the CW WW VHF Contest. See July QST, page 98, for more information.

* Vanity update: The FCC in Gettysburg reports it has processed vanity call sign applications received through June 2. In its last processing run, June 23, it issued 35 license grants. Another 71 applications landed in the work

in process (WIPs) stack.--FCC

* Illinois hams respond in tornado's wake: In the wake of a June 14 tornado, ARES members in the Quincy, Illinois, area joined forces with the American Red Cross to assess the damage. The storm activity damaged homes in at least two subdivisions. In all, five damage assessment teams, each accompanied by a radio-equipped amateur, fanned out to assess damage and injuries, which, fortunately, turned out to be relatively minor. In all, two businesses, a public building, and about two dozen homes were damaged. "Though the disruption to citizens' lives from the storm was painful, the ARES/ARC exercise was a success," concluded Adams County Assistant EC Jim Funk, N9JF. "Confusion was minimal. Volunteers responded quickly and cheerfully. Equipment worked." Funk said the hams learned a few things that should come in handy the next time there's an emergency.--thanks to Bob Crockett, N9KUT

* More Amateur Radio proclamations: Michigan and Georgia have joined several other states in issuing proclamations honoring Amateur Radio. In Michigan, Gov John Engler declared June 22-29 as Amateur Radio Awareness Week. The resolution cites Field Day and mentions the ARRL and the SAREX programs. In Georgia, the General Assembly designated June 27-28 as "Amateur Radio Weekend." The resolution specifically mentions Field Day and its role as an emergency exercise.--thanks to George Race, WB8BGY, and Al Fischer, KC4RIB

* Reply comment deadline extended: The date to file reply comments in the LMCC petition to reallocate VHF and UHF spectrum, including parts of 70 cm, to the Private Mobile Radio Service (RM-9267) has been extended to July 16.--FCC Digest

* New North Texas SM: Donald Thomas, KA1CWM, of Coppell, Texas, has been appointed the new Section Manager of North Texas. Thomas replaces Robert Adler, N5NY, who has resigned. The appointment is effective July 1.

* New General exam test pool: A new General class examination question pool becomes effective July 1. The new General exam will include five additional questions on the topic of RF safety. Applicants take note: as of January 1, 1998, only FCC Forms 610 dated September 1997 or later are acceptable to the FCC or to VE teams.--Bart Jahnke, W9JJ, ARRL/VEC

* AEA/Tempo not affected by Timewave filing: Mike Lamb, N7ML, of AEA/Tempo says the company is financially sound and has no connection whatsoever to the recent Chapter 11 bankruptcy filing by Timewave. Lamb said some hams have confused AEA/Tempo and Timewave, both of which purchased different portions of the former AEA product line last year.

* Ham radio for the birds? On May 3, while taking a break putting up a 60-foot tower for Bob Poirier, K0DJ, in Sinclair, Wyoming, the group of hams and a helper looked up and noticed a small bird on a tower support wire. Upon closer examination, they realized it was a cockatiel--someone's pet. The helper, Dave Trujillo, climbed back up the tower, and coaxed the bird to come to him. He then carried the bird to safety. On the ground Ken and Mert Fults, KC7RZI and KC7RZJ, caged the bird and returned it to its owner, who had been trying to get the bird back since the previous evening. The bird

was one-half of a breeding pair, and owner Mary Eaton was very surprised and pleased to get it back.--thanks to Mike Reed, N7ZEF

* Operation Postcard/QSL: Pupils at Philippi (West Virginia) Elementary School seek QSL cards from around the US and the world as part of an ongoing school project. School volunteer Debbie Buffum has invited hams to send QSL cards with a brief printed message in care of the teacher, Kathy Chitester, Philippi Elementary School, Rte 3, Box 38, Philippi, WV 26416. Buffum says the project began with a big map of the US and with a piece of yarn from each card to its state of origin. "The teacher would like to go international," said Buffum, whose husband and son both are hams (KD6IPY and KD6MMH respectively). Buffum hopes to see the project include a ham radio demonstration. Philippi is located in North-Central West Virginia, not far from Clarksburg, in Barbour County.--thanks to Ray Day, N6HE

* Amateur Satellites--Today and Tomorrow: Tired of the same old on-the-air stuff? Learn about something new--the exciting world of Amateur Radio satellites! Sign up for a fast-moving, five-hour workshop at the ARRL Southwestern Division Convention, Friday, August 14, 1-6 PM, on everything you need to get "on the birds." Hear about 16 Amateur Radio satellites now in orbit, including an FM satellite you can work with an H-T and the low-Earth orbiting SSB/CW "Easy Sats" on 2, 10, and 15 meters. This session covers equipment requirements, operating protocol, how to track satellites with your PC, and how to get ready for Phase 3D, and much more. Space is limited. To register, contact Dan Miller, K3UFG, at ARRL HQ, 225 Main St, Newington CT 06111; tel 860-594-0340, before Aug 4. The fee is $20 for ARRL members and $25 for nonmembers. The fee covers the cost of materials and five hours of instruction. You might wish to purchase the ARRL's Satellite Handbook, in advance. It's item 6583, and it's $22 (plus $5 UPS shipping/handling), available via the ARRLWeb site, http://www.arrl.org, or by calling, toll-free, 888-277-5289. This workshop is sponsored by AMSAT and the ARRL Educational Activities Department. Those attending the entire session earn 0.5 Continuing Education Units.

* Harlans take over OSCAR pub: Harlan Technologies has taken over OSCAR Satellite Report from Bob Myers. Shari Harlan, KB9SH, will serve as editor of OSR, published since 1981 and originally named AMSAT Satellite Report. OSR will be mailed twice monthly (24 issues per year) via first-class mail. "We print a DX Satellite column, written by Craig Mellinger, N2MNA, updates on all the satellites and their activity, biographies on the people that you talk to via satellite, orbital elements, and more," says Associate Editor Gene Harlan, WB9MMM. Subscription rates are $35 in the US, $38 in Canada, and $46 elsewhere. For more information, contact Harlan Technologies, 5931 Alma Dr, Rockford, IL 61108-2409; tel 800-557-9469 (orders); 815-398-2683; fax 815-398-2688; e-mail OSReport@aol.com; http://www.cris.com/~Gharlan.

* Amateur Radio shines at Tall Ships Riverfest: Amateur Radio played an important role in the Tall Ships Riverfest highlighting the Rockland County, New York, bicentennial celebration May 23-24. Approximately 125,000 people attended the event along the Hudson River. In all 46 amateurs participated in the two-day event, the largest public event in the county's history. "As

a result of all the efforts involved in putting this project together, public awareness of the value of Amateur Radio has been heightened in the county, and we now have further solidified open lines of communication with the various emergency services within Rockland County," said Bob Chamberlain, N2KBC, who thanked the participants. "Not only was our part in the operation a total success, we were afforded an excellent county-wide training exercise that has provided us with new and invaluable emergency response skills."--The Hudson Loop

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

5849. Repeater Directory

Newsgroup: rec.radio.amateur.misc

This afternoon, I go to Radio Shack. I will be buying some parts for my HT and for my new repeater and its antenna.

At this time, I've just started the software to control the repeater. So far, it works well. I made its own dynamic computer voice with help from Dialogic, and that seems to work great as well.

It automatically IDs itself (the repeater) every 10 minutes, I will be integrating a "watchdog" timer this weekend to prevent prolonged transmissions, and I will also be adding remote control of the repeater by phone access into the repeater. It also says the indoor and outdoor temperature, and says "Good morning" (etc) and the time and outdoor temperature every hour.

All this repeater is using now is 2 cables, a scanner, an HT, my controller software, and the text to speech and DTMF- and CTCSS-decoding software. That's it. So far, it has cost nothing, not including the radios I already had. It will cost me $2.00 to get the 1/8" to 3/32" microphone cable converter, but that's all I see in spending anything so far.

The only thing I've got left to do is make the sound card send the courtesy tones, I need to find some good courtesy tones, and control the transmit line to the HT. That's it! I also have to develop the software, but that's not the big deal.

How does everything sound so far?

FIELD DAY 1998: DON'T OVERLOOK THE NEW RULES

Clubs and individual hams across the US and Canada are gearing up for the 65th Field Day this weekend, June 27-28. Aimed at demonstrating the ability to operate under simulated emergency conditions and arguably the most popular operating event of all, Field Day has some new rules this year.

A major change this year is the elimination of bonus-point credit for packet and VHF/UHF contacts. Field Day stations no longer will be allowed to count contacts via digipeaters, packet nodes, or similar arrangements. Class 2A and higher Field Day stations still may operate a "free" transmitter exclusively for VHF or UHF operation (ie, above 50 MHz) without changing their basic entry classification, but not for bonus points.

These changes have upset some members of the digital community who say that eliminating contacts via digipeaters or packet nodes will discourage packet and APRS altogether. As in the past, crossband and repeater contacts other than via satellite do not count for Field Day credit.

Field Day stations now can earn point credit for digital (ie, non-CW) contacts on each band. The phone, CW, and non-CW digital segments are considered separate "bands" in the Field Day rules. CW and non-CW digital contacts count 2 points apiece. ARRL Contest Manager Billy Lunt, KR1R, says his department gets approximately 2000 official Field Day entries every year.

The first "International Field Day" was held back in 1933. It was the brainchild of then-Communications Manager Ed Handy, W1BDI. The complete, official 1998 Field Day rules are in the May edition of QST on page 108. Field Day takes place each year on the fourth full weekend in June.

A LIGHTER LOOK AT FIELD DAY--SOME TIPS

* You can compress the diameter of your rolled up sleeping bag by running over it with your car. This technique may also be used to make a folded dipole.

* A potato baked in the coals for one hour makes an excellent side dish. A potato baked in the coals for three hours makes an excellent counter-weight for hurling a leader line over a tree limb.

* You can start a fire without matches by eating Mexican food, then breathing on a pile of dry sticks while keying your H-T.

* In emergency situations, you can survive in the wilderness by shooting small game with a slingshot made from the elastic waistband of your underwear. This trick also works for stringing wire antennas.

* The guitar at the next campsite makes excellent kindling. The strings may be used for a VHF/UHF antenna.

* A large carp can be used for a pillow or as a ground for maritime mobile stations.

* Check the washing instructions before purchasing any apparel to be worn on Field Day. Buy only those that read "Beat on a rock in stream" or "Can be dried by HF RF."

* Effective January 1, 1998, you will actually have to enlist in the Swiss Army to get a Swiss Army knife. Contacts with HB stations do not count for bonus points, however.

* Bear bells provide an element of safety for Field Day operators in grizzly country. The tricky part is getting them on the bears.

--Modified for radio amateurs by Pete Kemp, KZ1Z, from the September 1996 issue of Backpacker magazine

AMATEUR RADIO SPECTRUM PROTECTION BILL HAS 39 COSPONSORS

ARRL Legislative and Public Affairs Manager Steve Mansfield, N1MZA, reports that HR 3572, the Amateur Radio Spectrum Protection Act, now has 39 cosponsors (including the original sponsor) and several more members of Congress have indicated their intention of signing on. "Letters from ARRL members are beginning to take effect," Mansfield says.

The bill, introduced March 27 at the request of the ARRL, would protect existing Amateur Radio spectrum against reallocations to or sharing with other services unless the FCC provides "equivalent replacement spectrum" elsewhere. The bill was introduced by Rep Michael Bilirakis of Florida, a Republican, with the cosponsorship of Rep Ron Klink of Pennsylvania, a Democrat.

Cosponsors also now include Peter DeFazio and Earl Blumenauer of Oregon; George Nethercutt of Washington; Frank Pallone of New Jersey; Tom Campbell and John Doolittle of California; Patsy Mink of Hawaii; David Hobson, Tony Hall, Steven LaTourette, Michael Oxley, and Dennis Kucinich of Ohio; Bob Clement of Tennessee; Dave Weldon of Florida; David Price of North Carolina; Robert Wise of West Virginia; Michael Crapo of Idaho; and Jay Dickey of Arkansas.

Others are Representatives Dan Burton of Indiana; Louise Slaughter, Sue Kelly, Michael McNulty and Peter King of New York; Charlie Norwood, Nathan Deal, and John Lewis of Georgia; Bud Cramer of Alabama; Christopher Shays of Connecticut; Collin Peterson of Minnesota; James Talent, Jo Ann Emerson and Ike Skelton of Missouri; Dale Kildee and James Barcia of Michigan; J.C. Watts Jr of Oklahoma; Scott Klug of Wisconsin; and Jon Christensen of Nebraska.

The bill points out Amateur Radio's basic purpose as a "voluntary, noncommercial radio service" that has "consistently and reliably" provided emergency communication during and after disasters. The measure notes that the FCC has "taken actions which have resulted in the loss of at least 107

MHz of spectrum to radio amateurs."

HR 3572 has been referred to the House Commerce Committee. An effort is under way to enlist additional cosponsors for the measure. Amateurs are encouraged to contact their Representatives and urge them to support the bill or to sign on as cosponsors. The full text of the bill is available at http://thomas.loc.gov/cgi-bin/query/z?c105:H.R.3572:

Mansfield is continuing to seek additional cosponsors for HR 3572 and urges individual hams and clubs to contact their representatives in Congress and encourage them to sign on.

MISSING LOGS INCIDENT PROMPTS APOLOGY, IMPROVEMENTS

ARRL Membership Services Department Manager Bill Kennamer, K5FUV, has apologized to the amateur contesting community after a number of ARRL 10-meter Contest logs sent via e-mail--most from high scorers--were not listed when the contest results showed up in July's QST. Blaming the problems on a balky e-mail autoresponder system, Kennamer called the log omissions "an inexcusable error." "It is my intention that this does not occur again," he said in a posting this week to the CQ Contest Reflector.

Kennamer said the e-mail autoresponder worked--indicating to those who had e-mailed that their logs had been received. The problem was that the log gathering procedure did not. "The situation was rectified months ago, but no one notified the world. Thus we had many logs missing, most of them top logs," Kennamer explained.

Kennamer said a new redundant system is in place that uses both an in-house computer to record logs as well as another system outside of ARRL HQ. "You should receive a response that your log has been received, and the log should be saved on two computers," he said.

Kennamer said the League also has instituted a program--effective with the ARRL DX CW Contest--of posting logs received on the ARRLWeb site (http://www.arrl.org/contests/) as soon as the log database is completed. Kennamer said he hopes to eventually be able to provide a daily Web update of logs received. "Meanwhile, we will be posting changes to the received logs list on the CQ Contest Reflector as they occur," he said.

Prominent contester Trey Garlough, N5KO, spent a week at ARRL HQ in May reviewing the Contest Branch and recommended some changes in procedures.

As for the ARRL 10-meter Contest results, these are being updated on the ARRLWeb page. Kennamer said those whose logs still are missing should send another copy of the log file and summary sheet to him at k5fuv@arrl.org. A corrected summary of the contest results is slated to appear in the October issue of QST.

"Our aim is to get back to having the premier contest program in Amateur Radio," Kennamer concluded. "We know that's what you want and deserve, and we're going to make the extra effort to get it for you."

I found a keyboard mod for the T7A on the internet. It extends the receive so it seems to cover 50 - 999.999 MHz with some gaps. FYI: Hold simultaneously MONI - BAND - POWER_ON, I take no responsibility for this course of action...

Anyway, just for my own peace of mind, does anyone know how to return to the original RX mode? I think a CPU reset should do it, but I don't want to erase all the stuff.

Anyone know of any other mods for this excellent unit?

TIA!

>Need the formula to determine the radiator and radials for a 5/8 wave
>groundplane. The ARRL ARH doesn't appear to cover it.
>Thanks in advance.

Depends upon the edition of the Handbook you have. Each year the HB carries different construction projects. But really, the HB shouldn't have to tell you that the radiator length of a 5/8 wavelength antenna is 5/8 of the wavelength of the freq'y you'll be transmitting at (remembering that in mathematics, "of" means multiplication): 5/8 * 300/f = the free-space length. Don't forget to compensate this FS length due to the "velocity factor" (RF travels a bit slower in a conductor than in free-space - velocity in a conductor can range between 65 to 95 percent of that in free-space).

I used quarter-wave length radials with the 5/8 wave 2m antenna I constructed. After adjusting the center-tap of the inductor, a perfect match was obtained.

>Abuses by the BATF http://www.access.digex.net/~go-batf-go!

Sorry you feel that way, Frank, especially since the BATF is doing exactly what I pay them to do. Obey the laws of the land, and you can go about your life focused on work and family, and contributing to society with nothing to fear. If you don't like a particular law, work to get it changed - there are processes in place to do exactly that - much less stressful than arming yourself to the teeth and hiding under a bed scared that the big, bad BATF will come bursting through your door.

[W6PIY Bulletin 1998-06-002]

WVARA 1998 Field Day Site to be Largest in Northern California

June 18, 1998

At the West Valley Amateur Radio Association's June 17 meeting, it was confirmed that the club has the station coordinators and equipment for a "10A" Field Day site, making this the third year in a row of setting new records for the largest Field Day site the club has ever held. The 10A (pronounced "ten alpha") category means that there will be 10 competition Ham Radio stations in simulataneous operation at the site. The "A" is a category for amateur radio clubs operating under simulated emergency conditions on generator and/or solar power.

In 1997, WVARA's Field Day site was in the 7A category and ended up tying with a group in the San Joaquin Valley for the largest site in Northern and Central California. Since it's rare for clubs to jump up 3 categories in a single year, WVARA considers it all but certain that this year's entry will be the largest in the region. The reason for the increase is simply because the number of people who volunteered to coordinate stations this year supported plans for a larger operation.

Though the nature of Amateur Radio Field Day is to encourage visitors and the public to come and see Amateur Radio in operation, WVARA's larger and larger Field Day operations in recent years have been especially good as educational opportunities because of the proportionally greater chances for leaning experiences. It is also possible for new Hams (or prospective Hams) to get some time operating radios under the supervision of control operators with higher classes of licenses. Hams who visit and want to operate are welcome to do so at any time of the day or night, and grateful operators will usually take advantage of these opportunities to take much needed breaks during the 24-hour long event. The combination of this flexible atmosphere at a site intent upon making as many contacts as possible is only possible at large Field Day operations. Smaller operations usually have to choose between these two approaches.

The WVARA will host barbequeues on Friday and Saturday afternoons at 3PM at the site. Attendees are requested to bring a side dish but the burgers, hot dogs, condiments and soft drinks will be provided by the club.

See http://www.kluft.com/~ikluft/ham/wvara-fd.html for a map.

The W6PIY Bulletins index is at http://www.wvara.org/bulletins/

If you would like to respond to any W6PIY bulletin, contact president@wvara.org or attend any meeting.

The West Valley Amateur Radio Association is a general-interest Amateur Radio club serving the San Jose/Silicon Valley area. The association meets on the 3rd Wednesdays of each month, except in December when a holiday party is held instead of a meeting. Licensed Amateur Radio operators may also participate in the WVARA's weekly nets (meeting on the air) Tuesdays at 8:30PM on the W6PIY VHF repeaters (147.39+ and 223.96-). Visitors and guests are welcome at any WVARA meeting or net. See the WVARA Home Page at www.wvara.org for more information.

Gary, I've never really been able to get a handle on what makes a 1:1 balun provide better antenna radiation. I understand using a 4:1 etc, for impedance matching but whats happening with a 1:1?

Just like here at home!

Face it, the governments of both countries view amateur radio as nothing more
than a nuisance and would like to wash their hands of it once and for all. And
why not? It takes up their time and provides them with zero revenue in return.

Notice, though, that our government often attempts to stifle the free speech of groups which it doesn't agree with under the guise of "hate speech." Several KKK and similar marchers have seen attempts being made to stop them by local officials. Fortunately, the courts almost always overturn these would-be censors by ruling in favor of the marchers' freedom of speech and freedom of association. Let's hope Bill Clinton does not get the chance to make any further Supreme Court appointments.

>something about some Audio sub tones.

Frequency Band in Germany is 144-146 MHz I believe ? Most of the
repeaters here operate on 146 - 148 MHz.
For 430 MHz, we use 440-450 MHz, not 430-440 (i.e. your transceiver
from Germany will be useless to access the repeater).

>In Germany normally you open the repeater with a 1750 Hz tone for 1 second
>and then you can speak. The shift at here is -600Hz.

you also need to have a tranceiver that has CTCSS capable if you wish
to access the repeater which uses CTCSS (i.e. 100.0, 103.5 etc.).

SB QST @ ARL $ARLB046
ARLB046 FCC amends rules for U-NII devices on 5 GHz

ZCZC AG46
QST de W1AW
ARRL Bulletin 46 ARLB046
From ARRL Headquarters
Newington CT June 26, 1998
To all radio amateurs

SB QST ARL ARLB046
ARLB046 FCC amends rules for U-NII devices on 5 GHz

The FCC has amended its rules for Unlicensed National Information Infrastructure (U-NII) devices operating in the 5-GHz range under Part 15 of the Commission's rules. In 1997, the FCC made 5.15 to 5.35 and 5.725 to 5.825 GHz available to U-NII devices under Part 15 of its rules. Amateur Radio shares part of the spectrum involved, from 5.650 to 5.925 GHz. U-NII devices would provide short-range, high-speed wireless digital communication.

In response to industry petitions for reconsideration and clarification, the FCC has amended Part 15 to permit fixed, point-to-point U-NII devices in the 5.725 to 5.825 GHz band to operate with up to 1 W maximum transmitter output power and directional antennas of up to 23 dBi gain. The Commission will specify transmit power limits as a function of the channel bandwidth. A logarithmic equation would determine the power permitted. ''This action will not increase the maximum power permitted by U-NII devices, but merely scale permissible maximum power to the bandwidth used,'' the FCC said.

The FCC said it will consider higher gain antennas for U-NII devices for longer-range community networking. In its comments, the NTIA expressed concerns that high-power government radar systems could interfere with the unlicensed devices, but otherwise supported the use of higher-gain antennas for fixed, point-to-point U-NII devices in that band.

The ARRL has argued that longer-range links will interfere with amateur operations and are a significant departure from Part 15, which requires that interference potential of unlicensed devices be subject to ''reasonable regulation'' so as to not interfere with licensed services. One industry petitioner, Apple Computer, said the ARRL has not demonstrated that U-NII devices present any real threat

of interference to ham operation.

The FCC said it would maintain the power spectral density limits adopted in the original report and order.

The FCC also revised its rules to express U-NII out-of-band and spurious emission limits in terms of absolute radiated power levels, regardless of antenna gain.

The FCC advised manufacturers ''to consider the proximity and the high power of non-government licensed radio stations,'' including amateur stations, when choosing operating frequencies during the design of their equipment.

The complete text of the FCC Memorandum Opinion and Order, released June 24, is available on the FCC Web page at http://www.fcc.gov/Bureaus/EngineeringTechnology/Orders/1998/fcc98121.txt.

From Tad Cook, K7VVV
Seattle, WA June 26, 1998
To all radio amateurs

SB PROP ARL ARLP026
ARLP026 Propagation de K7VVV

Solar activity was lower again last week, and geomagnetic indices were unsettled. The average solar flux for the previous 90 days dropped one point from 108 to 107, and the solar flux for every day last week was lower than those figures. This is not a good indicator for an upward trend.

Over the next week the solar flux is expected to rise, reaching 115 from this weekend until the following July 4 weekend. The flux should go below 110 again around July 10.

On Friday through Sunday, June 26 through 28 the solar flux is forecast to be rising, at 110, 112 and 115. Over those same days look for unsettled conditions on Friday with a planetary A index around 15, and then an A index of 8 over the next two days. It looks like fairly good conditions for this Field Day weekend, with solar flux about 40 points higher than the 1997 Field Day.

Many readers of this bulletin use the WA4TTK Solar Data Plot Utility by Scott Craig. It grabs data out of this bulletin and stores it in a database, then plots the data for you. Users had problems grabbing the data from the past two bulletins due to some inadvertent changes in wording in ARLP024 and ARLP025. Scott has released version 3.03 which fixes this problem, and you can download it from Scott's homepage at http://edge.net/~scraig/index.html.

Here are some path projections for the Field Day weekend.

From the East Coast to the West Coast, check 80 meters from 0230z to 1030z, peaking around 0430z to 0900z. 40 meters should be good from 0030z to 1230z, and peak from 0400z to 0930z. 20 meters should be open around the clock, with conditions slowly getting better in the evening until 0500z. 15 meters may open around 0300z to 0500z.

From the East Coast to the Central U.S. check 80 meters from 2300z to 1230z, with excellent signals around 0930z. 40 meters looks good around the clock, peaking from 0100z to 1000z.

From the West Coast to the Central U.S. 80 meters looks good from 0215z to 1230z, peaking from 0530z to 1000z. 40 meters is open all the time, but best conditions are from 0400z to 1030z. 20 meters is best around 2300z to 0800z and 1100z to 1530z. There may be some 15 meter openings from 0330z to 0530z.

From the Pacific Northwest to the Southeastern states, 80 meters looks good from 0030z to 1100z, and 40 meters from 0030z to 1300z. 20 meters looks promising from 1500z to 0600z and around 1230z to 1300z.

Don't forget to check 10 meters for some sporadic E skip.

Sunspot Numbers for June 18 through 24 were 68, 67, 80, 87, 64, 59 and 64 with a mean of 69.9. 10.7 cm flux was 100.1, 101.2, 101.1, 102, 100.5, 95.7 and 105.3, with a mean of 100.8, and estimated planetary A indices were 7, 14, 14, 15, 10, 10, and 14, with a mean of 12.

ï¿½Tired of not being able to get on the air when the wife and kids are using
the telephone or computer? Let my RFI Filters solve your problems for good. -
Modular design - Simple install - Many in use in Amateur radio and CB
service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail,
Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time
in the past or present, the Attorney General of the State of South Carolina
would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic
devices known as "RFI Filters" that contain nothing more than about 60 cents
worth of useless surplus electronics parts. Mr. Whiten claims to have a
ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US
Patent database yields no such patent application or any past patent activity
by Mr. Whiten. If you have purchased one of these devices then you should
immediately demand that Mr. Whiten return your funds. If he refuses, then
contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include

the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail,
Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time
in the past or present, the Attorney General of the State of South Carolina
would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic
devices known as "RFI Filters" that contain nothing more than about 60 cents
worth of useless surplus electronics parts. Mr. Whiten claims to have a
ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US
Patent database yields no such patent application or any past patent activity

by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Gentlemen,

I've received several constructive comments regarding my web kingdom. Thank you. I will make adjustments as needed. I also will be leaving the general observatons I've made. Many of you know they are in fact accurate. They may, I hope, serve as a lesson on how not to bore other hams and in some cases, nauseate them.

You didnt mention if it was underground or what. Basically if it has been
kept high and dry RG-213 will probably last about 20 years. This of course
varies depending on freq of operation. Generaly anything for HF is good for
a while.

> be able to handle this?!? I have a gold tap right off the batt terminal,

In general the cars ignition system draws about 60 Amps - usually
supplied direct from the Alternator rather than the battery (except when
starting).
Headlights (on high beam (120W each)) draw 20 Amps plus another 10 Amps
for other lights, etc.

Based on this - as long as the engine is running and the headlights are
off - shouldn'e be a problem - particularly if the engine is really
running (riving revs) rather than idling.

Cheers

Fabian Stretton - Product Development Facility

Bob: I guess you intend to install the equipment in the Ford (vs
another car or different equipment), and modify the 12 V electrical
system if needed. I would suggest either installing everything, or
temporarily connecting it, running the motor at idle and city traffic

speeds, and measuring amount and direction of current to the battery.

I checked some Hanes Automotive Repair Manuals, a consumer how to repair your car soft cover book available at auto parts stores. They say an inductive type ammeter is available at most auto parts stores. This type meter will measure current from the magnetic field surrounding a wire, so the wire does not need to be cut and an ammeter put in series.

You need to put the ammeter on a wire between the battery (or battery and starter), and everything else. You then can turn on the equipment, run the motor, and see if the battery is supplying current, or the alternator is providing adequate power and charging the battery. Turn on the headlights, and note the direction the ammeter needle is moving (motor off). This is the discharge direction. I think the battery could discharge when transmitting, but should charge under other conditions.

Finding the proper wire in a modern car is difficult, but Hanes has wiring diagrams. Remember to have adequate protection in case your wiring shorts to ground. This problem happened to me after dark years ago. The lights went out, and the wire became red hot, an awkward situation.

In article <35955A94.51CE@bellsouth.net>, Randy Davenport
<rbdavenp@bellsouth.net> writes:

>
>You need to check your history. The nation of Islam came long after
>Christianity. They borrowed from the Christianity. By the way how much
>does the Nation of Islam have in comman with other Islamic groups? Not
>Much.
>
>

No, no no, Randy. I was not speaking of either Islam or Christianity in general. I was only talking about the Nation of Islam and certain Christian groups. I am well aware of how much time had elapsed between the advent of Christianity and the Hegira. The conversation stemmed from a condemnation of sorts of Louis Farrakhan. I was only pointing out that he does have his good points, along with the bad.

I agree that N of I is far removed from mainstream Islam. It appears in fact that there is just as much variation between Islamic sects as there are within Christianity, or Buddhism, or etc etc etc.

I agree that Christianity has a lot to offer in the way of providing a healthier lifestyle and promotion of family values. However, no one religious dogma can successfully reach everybody. No one philosophy can appeal to every single person in every single situation. N. of I. manages to effect a change in the lives of many that the evangelical Christians can't seem to win over. If Christianity could reach everybody, there would be nobody left to convert to Islam, would there?

I am not talking about what I myself believe as far as the "best" or the "only" religion. I am talking about what is being done and what is working to help turn felons, addicts, deadbeats, and welfare cases into responsible workers, citizens, and family members. Do not make the mistake of thinking that this is a discussion of religion, please.

Now, since the original post and the subject of this thread is why Blurt has a ham license, this is my last post to this thread that discusses anything else.

5898. Frequency Modulating a WAV?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-27 00:00:00 UTC
From: peter_mattson@my-dejanews.com
Message-ID: <6n3v78$8dv$1@nnrp1.dejanews.com>
Source record: 168627

Hi,

Does anyone know of a shareware prog that is capable of frequency modulating a wav file onto an audiable carrier.

Failing that does anyone know of where I may find the maths to do this so I may write my own program?

Regards

Peter

>designed for such service)?

In the Northeast, and in most rural areas of the country that rely on volunteers, many of them must use their own vehicles to either respond to pick up a garaged emergency vehicle or to go to the scene as supplimental personnel. Because many fire and ambulance disrticts have a low tax base some departments must make do with $40,000 a year for fuel, maintenance, radio repairs, training costs, etc. What's your budget? In my area, my local F.P.D. covers 110 square miles and the closest fire station is 5 miles away. If you are closer to the call than to the station, that's where you go. BY LAW here in Missouri, volunteers are allowed to use blue lights and a siren. In NJ, we were allowed to use a blue light under certain conditions. As the Chief of the department, I was authorized by the state to have and use RED lights and a siren. My town was lucky it had working equipment. I would've been booted out on my ass if I asked the politicians for a special vehicle for myself rather than keeping the fleet of response vehicles maintained.

My closest PAID, tax and fee-for-service subsidized Paramedic unit here is 38 minutes away. The ambulance district uses volunteer first responders in the community to bring CPR and automated defibrillation closer to the scene. They don't pretend. They're as real as you are.

>It's no wonder folks in the profession ask why full-time regular-salary
>emergency workers look down on the part-timers cruising town in their
>pretend emergency vehicles.

The guy who originated the message wants to build a "buff car," and I laugh at that (mostly 'cause I had one myself- NOT at HIM because he volunteers) but that's no reason to slam him or volunteers as less than full-time employees or pin them with pejoratives.

In the '80s I was a Full-time, professional Paramedic (AFSCME Local 2507) in New York City and in Jersey City (AFSCME Local 2465 we were not a bunch of TV glamour boys on either job, I guarantee you!) and still volunteered my time and expertise in my home community - and I used my own car there. Several of my partners were vollies in Long Island and NJ. They used their own cars, too. None of us ever

pretended or looked down on anyone else in emergency services.

Eighteen years and 900 miles after I carried my first stairchair down five flights in a project I still volunteer when I have the time - and I still use my own car.

That's how it's done elsewhere. I'm sorry if it makes California or Hawaii look bad.

Steve

Dear Burt,
Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.
Please don't listen to those who talk as if they know you and your family
personally,as I'm sure none of the things they say about your past is true.
You, with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.
Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.
Wishing you the best.

Dear Burt,
Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.
Please don't listen to those who talk as if they know you and your family
personally,as I'm sure none of the things they say about your past is true.
You, with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.
Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.
Wishing you the best.

So is this some sort of a hi power transistor, MOSfet or some kind?
I'll take a look at the wab page.

Which I have a question on. How much current should these diodes
be rated for? I look at alternators, about 65 Amps to 80 Amps.
So is 100 Amp rated diode more than sufficient?

Mike, when are you going to come clean on your very own 12 or so clubs? What are the constitutions and by-laws? How do you raise funds? How do you vote? Who were the originating members? And who elected them?

What are the purposes for starting 12 or more clubs? Was it to divide the amateur community further? Was it to get that special callsign that you thought would be issued next? Perhaps you wanted a call from every district?

Time for you to shut up or put up.

Brian/N0iMD

"Brad Johnson" <bradj@tir.com> writes:

>If you put another battery in a car, should it be wired in series or
>parallel?

Neither. It should be isolated via a special gadget available from
an RV dealer. That will allow the second battery to charge from the
alternator without allwoing circulating currents between the
batteries.

>> .....MAYBE as much as six amps, but sixty? Come on.

>Ok Kids let's add up some "average"numbers, Ign system 10 to 15
>amps, ...

I objected to sixty amps for the *IGNITION* system. Yes, loads add
up. No, the ignition system is not the only load.

I'm also not arguing with your statements on full-blown circus-wagon
loads. But the original poster spoke of loads far far less than you
mention.

For your case, I have just what you want. It's a WWII surplus "P1
aircraft generator" - 300 amps @ 28 volts, gear driven, oil cooled.

Failing that, I also have a deal on 200 amp 14 v Leece Nevill [sp?
it's been years; we used to call them Leaky Navals..] alternator;
hope you have a big enough engine belt for the pulley on it...

ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a

complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Actually, an isolator is only required if you intend to use the batteries separately, but want them both to be charged by the alternator when the car is running. Like power aux equip from one without discharging the other so you can still start the car. This is how RV trailer batteries are often done.
If you are adding the extra battery just to make additional current available then no isolator is needed. All Diesel powered light trucks, of which I've owned a few, come with 2 batteries to handle the load of the starter, and they are just in parallel.

Subject: QST proves you right, Burt
To: burt@innocent.com

Burt,

I received the April issue of QST in the mail yesterday. I was reading the correspondence on
page 24. One of the letters is titled "Top ten things a ham needs in his/her shack."

Reason #2 reads "A picture of you with your arm lovingly wrapped around your loved one, ie, that
brand new transceiver!"

It pretty much emphasizes your point of where hams place their priorities.

5944. A real test for hams

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-27 00:00:00 UTC
From: burt1@my-dejanews.com
Message-ID: <6n2gfm$a4p$1@nnrp1.dejanews.com>
Source record: 168714

his test is for ham radio operators:

1. Do you say QSL on voice?_____

2. Do you say "For ID" after your call?_____

3. Is it rare for you to have a contact longer than 20 minutes?_____

4. Do you check into traffic nets to up the "body count?"_____

5. Do you check into traffic nets for any reason?_____

6. Do you participate in contests and like it?_____

7. Are you overweight and hold an Extra Class license?_____

8. Have your worked more countries than the number of sexual encounters with your spouse?_____

9. Are you a regular on a two meter repeater?_____

10. Do you dislike children in general?_____

11. Do you ask for help and when received from a number of hams send out a general thank you to everyone in the world?_____

12. Do you think it is wrong to talk about politics or other interesting topics on ham radio?_____

13. Do you disagree with the opinions of k1oik@mindless.com?

How to Score:

Number of Yes answers:

2 or less- are you sure you are a ham?
4 to 6- you are on the edge of being human or ham.
6 to 8-you are a typical ham-very boring.
8 to 1O-check your pulse, if you find one re-take test.
1O or more. Call the funeral home, send your name into QST as a Silent Key.

Message-ID: <6n2gij$a4u$1@nnrp1.dejanews.com>
Source record: 168715

Here is what other hams say about me:
Burt

Its obvious to me this guy (smartass) never read any of your posts
on alt.support.divorce. Just like a ham to shoot his mouth off
without having any of the facts.

Burt, I want to say keep up the good work. These "hams" need to
be shaken up as frankly, most of them are losers. I do not call
myself a "ham", I am a radio experimenter. I got my amateur radio
license to allow myself access to radio frequencies.

BTW, my wife (of 8 years) really enjoys your posts making fun of
ham operators. At one time I was involved with the "social" side
of ham radio... so she has seen some of the things you mention.
She was able to reform me and show me the error of my ways.
You should start a comic strip.... lets call it "Hambert".
(Model it after Dilbert to a degree) I'd bet money you could
get one of the ham rags to run it.... or maybe on a web site?

Best Regards,

Date: 1998-06-27 00:00:00 UTC
From: burt1@my-dejanews.com
Message-ID: <6n2glg$a54$1@nnrp1.dejanews.com>
Source record: 168716

1. What is the thinnest book in the world?
What hams know about women.

2. How does a ham take a bubble bath?
He eats beans for dinner.

3. What's a ham's idea of foreplay?
A half hour of contesting.

4. How can you tell if a ham is sexually excited?
If he's still breathing.

5. How many hams does it take to change a roll of toilet paper?
We don't know...it has never happened.

6. What's a ham's idea of helping with the housework?
Lifting his leg so you can vacuum.

7. What does a ham consider a seven course meal?
A hot dog and a six pack of beer.

Recently my students were working on a scanner to repair. They wanted a frequency to listen to so I gave them 147.045 the local repeater. The students said the most interesting thing they heard was the robot voice on the repeater all day. There were many other voices on the repeater but the were so called "live" hams. The kids said most of the conversations were about the weather, getting coffee and other inane topics. One who recently asked me for a book on ham radio told me to forget it. Ask Justin or Jim.

5949. How ham treat "THE WIFE."

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-27 00:00:00 UTC

I N S T R U C T I O N S F O R T H E Wife of a typical ham

Have dinner ready. Plan ahead, even the night before, to have a delicious meal on time. This is a way of letting him know that you have been thinking about him and are concerned about his needs. Most men are hungry when they come home and the prospect of a good meal is part of the warm welcome needed.

Prepare yourself. Take 15 minutes to rest so that you'll be refreshed when he arrives. Touch up your makeup, put a ribbon in your hair and be fresh looking. He has just been with a lot of workweary people. Be a little gay and a little more interesting. His boring day may need a lift.

Clear away the clutter. Make one last trip through the main part of the house just before your husband arrives, gathering up school books, toys, paper, etc. Then run a dust cloth over the tables. Your husband will feel he has reached a haven of rest and order, and it will also give you a lift.

Prepare the children. Take a few minutes to wash the children's hands and faces (if they are small). Comb their hair, and if necessary change their clothes. They are little treasures and he would like to see them playing apart.

Minimize all noise. At the time of his arrival, eliminate all noise of the washer, dryer, dishwasher, or vacuum. Try to encourage the chilclren to be quiet. Be happy to see him. Greet him with a warm smile and be glad to see him.

Some don'ts. Don't greet him with problems or complaints. Don't complain if he's late for dinner. Make him comfortable. Have him lean back in a comfortable chair or suggest he lie down in the bedroom. Have a cool or warm drink ready for him. Arrange his pillow and offer to take off his shoes. Speak in a low, soft, soothing and pleasant voice. Allow him to relax and unwind.

Listen to him. You may have a dozen things to tell him, but the moment of his arrival is not the time. Let him talk first.

Fleaspeak - the vernacular of hamfest fleamarkets.

Fleaspeak English Translation

This rig puts out a BIG signal It's 50 kHz wide
This is a really good CW rig. It doesn't work on SSB.
This is a really good SSB rig. It doesn't work on CW.
This is a really good rig. It doesn't work on CW or SSB.
The transmitter is outstanding. It doesn't receive.
The receiver is really hot. It doesn't transmit.
This rig is really hot. It's stolen.
It seems to be a vintage regenerative type. It oscillates.
I just retubed it. Got 'em from questionable used tube stock.
I just aligned it. The slugs on the transformers are jammed
I don't know if it works. it doesn't work, probably never has.
It doesn't chirp. it doesn't chirp because it doesn't transmit.
The audio sounds great. The 120Hz buzz is faithfully reproduced.
I just had it serviced. I sprayed WD-40 over all the wiring.
It comes with the original box. Just brush out the kitty litter.
Better buy it now, cause it won't last. no transation needed.
Sure, it works at full power. It sucks all it can from the wall.
This rig has wide frequency coverage.
It drifts up and down and out of band.

Frequency stability is great.
The VFO doesn't work - you'll have to use crystals.

Real popular rig in its day.
There were whole HF nets on the repair and maintenance problems.

QST gave this one a really great review.
The language broke new ground for profanity.

It might need a bit of tweaking.
Marconi himself couldn't fix it, much less align it.

It was used in government service.
It was stored outdoors on a wooden pallet.

The dial drive may need lubricating.
the gears are stripped and the setscrews frozen.

I plugged it in to check that it lights up.
The light came from the two foot high flames.

I'm selling it because I have two of them.
I'm getting rid of my parts radio.

You won't find one at a better price.
Better from the point of view of the seller.

This is a collector's item.
the manufacturer just went belly up and won't honor the warranty.

It came from an estate sale.
If you have any problem take it up with the owner.

I had it on the air just last night.
And you thought the woodpecker was gone.

It worked last time I used it.
if it still worked I'd still be using it.

The only lightning damage was a fuse.
The only lightning damage I recognized was a fuse.

I have the [...] somewhere. I'll send it to you.
you'll never see the [...].
I'll help you carry it to the car.
I'll do anything to unload this boat anchor.

It works ok on 80 meters.
It had some parasitics
but I got in and really screwed it up and now I want to unload it.

The tubes used by this rig are worth the asking price.
The rig uses a rare 7360 beam deflection tube for a balanced
modulator, but it's blown and you'll spend \$80 to get a new one.

This is the rig of my dreams. I really wanted one of these as a
kid, but now <snif> I've got to let it go.
As I've gotten older, I've learned what a hunka junk it is.

The signal quality of this rig was easily recognizable in its day.
The high distortion and bad audio quickly identified this rig.

This rig will bring back the feelings and atmosphere of vintage
ham gear.
The bypass capacitors to the
AC line put enough voltage on the chassis to give you a shock
in the lips through the microphone, and it smokes so bad when
you turn it on that you'll probably start coughing and wheezing.

I'd keep this baby, but my wife is making me clean everything
out.
I finally got around to giving this thing the proverbial heaveho.

There are a couple of other people interested in it.
someone sat on it to tie his shoelaces while walking past the table.

You'd better buy it now, because I'm leaving soon.
The previous buyer and his brother,
Guido, are heading back toward the table and they aren't smiling.

Joe NA3T, FM05

>Brian/N0iMD

Sarah Brady is a classic example of a person who is willing to blame
inanimate objects for the actions of human beings. I see things a
bit differently.

Brian, the only way the ovens of Auschwitz were able to be filled is
because the Nazi's got the Jew's guns, and the Jews gave them up
instead of shooting the Nazi's. There are many instances where
armed Jews resisted the Nazis, and died bravely, defending themselves
against evil oppression. However, the ones that wern't able to
resist got what any voluntarily disarmed populace can be subjected to.
Nobody who owns a gun can have it taken away from him without a
fight to the death -- usually involving the deaths of someone who is
willing to oppress and subjugate an entire population. I am personally
willing to die for my rights as an American. It's the only way I can
live in freedom.

The purpose of the Second Ammendment is to give law-abiding
Americans the ability to resist the excesses of any totalitarian
movement. This is an essential right which must be preserved.

On the balanced side of the 1-to-1 balun the ground connection has been
removed. What ever is on the balanced side floats with respect to ground.
No current can leak away or flow into the ground.

By extension, when you're 92 you'll still be complaining about the NCI BOD elections or lack of elections? Get a life.
Once NCI fufills its mission, I won't complain about your 12 clubs and how the initial officers were elected - if any, or how you fund them.

And if done the way Roger Smith did it, it's a loser. The real
problem with parallel batteries is balancing the load. To do that
you need to equalize the lead resistance. Even so, you get
circulating currents. The better approach is a correctly-sized
starting battery to begin with....

There's an old engineering maxim which says, "If it ain't broke, don't
fix it." That applies here. As long as the cable tests good, leave it alone.
Just be sure you know how to test it properly. The best test is to pulse
it with a TDR.

[Use a fixed pitch font to view the ASCII art.]

Ok, here's a dipole:

```
I I
------> ------>
------------------------------x x----------------------------
```

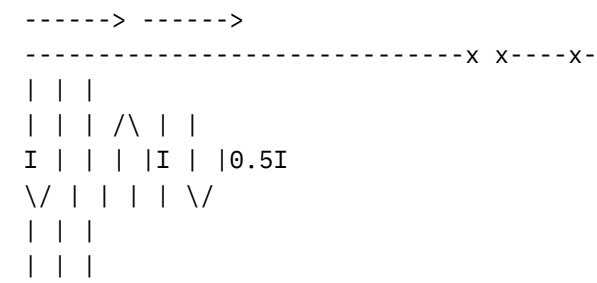
At resonance it needs equal currents flowing in each leg to work properly.
The currents have to flow in on one side of the feedpoint while they flow out
on the other to generate the standing current wave on the antenna. So the
feeder must supply currents differentially to the antenna in a balanced
fashion.

```
I I
------> ------>
------------------------------x x----------------------------
| |
| | | /\
I | | | | I
\/ | | |
| |
| |
```

If proper balance is maintained, the currents on the feedline are
exactly equal and exactly 180 degrees out of phase with each other.

So there is no radiation from the line. Antenna currents are exactly equal and exactly in phase, so they reinforce to produce the antenna radiation pattern. All is right with the world.

But what happens when we connect coax directly to the antenna feedpoint?



Coax is balanced line in that the currents on the inner conductor and the *inside* of the outer conductor are differential and equal. But coax has defacto a *third wire*. This is the *outside* of the coax. It is separated from the inside of the coax by skin effect, and it is *directly connected* to one leg of the dipole. Currents will divide between that dipole leg and the outside of the coax.

The vector sum of the in phase currents on the dipole will now be less, so the broadside radiation from the dipole will be less (and skewed in direction too). The currents on the feeder will now be greater, and not in balance, so the feeder radiates too.

Now I showed the currents dividing equally between one leg of the dipole and the outside of the coax. This won't normally be the case. The currents can divide in any ratio depending on the common mode impedance of the dipole leg and the common mode impedance of the outside of the coax. This depends on a number of things, including length, objects in the near field, and what may be connected to the far end. It would be an extremely unusual happenstance if both the dipole leg and the coax had exactly equal common mode impedances. So the current may be greater on the feeder or on the dipole leg, we can't say without more information about the particular installation. In any case, this is bad, and we want to avoid it.

The way to avoid it is to use a choke balun. This can be nothing more than coiling the coax up right before it attaches to the antenna. This coil has inductance, and the reactance of that inductance will raise the common mode impedance of the outside of the coax shield. With that path now having a higher impedance, less antenna current will flow on it, and more will flow on the dipole leg. With enough reactance, virtually no current will flow on the coax outside and virtually all will flow on the dipole leg. This is exactly what we want.

What about the currents on the *inside* of the coax? Since they are exactly equal and exactly 180 degrees out of phase, they produce no net magnetic field and the inductance is invisible to them. As far as they are concerned, it isn't there.

Now simply coiling the coax can often produce enough inductive reactance to the common mode current. But in some cases we need more. To get more, we can use a toroid and wind the coax around it. The inductance is multiplied by the relative permeability of the toroid material, and we get more inductance. Coax is often bulky to wind on a toroid, so we can wind a wire pair instead, and connect the pair ends to the coax and the antenna respectively. The effect is the same, and at HF the different characteristic impedance of the pair won't matter for the relatively short length used.

We can also slip ferrite beads over the coax instead of winding it into a coil. These act as a loss resistance to the unbalanced current's magnetic field. If we make this loss resistance large enough, not much current will flow through it. So we achieve the same result as with the other designs. (Again the differential currents *inside* are balanced and have no net magnetic field, so they don't "see" this resistance.)

So the purpose of the choke balun is to make the currents go where they are supposed to go, onto the dipole legs, and not go where they aren't supposed to go, down the outside of the coax shield. That's all there is to it.

You probably are not aware of this new "gadget" for battery isolation. It has
special switching in a solid state package without the diode voltage drop.
With one model you can crank an engine through it with your backup battery.
You can read about it here: http://www.hellroaring.com/products.htm

I found this in my Sat. morning paper and
immediately thought of ole Rich who thinks
bad check fraud just goes away.......

ORLANDO, FLA.--(AP)--Police are trying to determine
if the 40 year old woman named Elizabeth who gave
birth on the Internet last week is a woman who is
wanted on bad check charges.

Authorities in Seminole County have warrants for
the arrest of an Elizabrth Ann Oliver for writing
$359.49 in worthless checks in 1989, Chief Deputy
Steve Harriett said today.

A detective is working full-time to locate her,
Harriet said. No one was home at Oliver's last
known address in the county, he said.

The reports came a week after a woman known only as
Elizabeth gave birth over the Internet to a baby
Sean at Orlando's Arnold Palmer Hospital.

OOPS! Pardon me! Ham Licensee.

But really, Drew... you must get on the air SOMETIME. You never got on the air when you first got your ticket?

Anyway, nobody can sing along with you, as you did not include the music with the lyrics.

Sheesh! a two meter repeater? no wonder they thought it was boring. Try CW,
RTTY, or another data mode. Or FAX, or SSTV, or ATV. Or show off some homebrew
gear. Don't define ham radio for these kids as yikkkity-yakking into a mic.

So how did they do that... did they just download the kid from the mother's
web site? Sounds a lot more convenient than the old fashioned way.

So, what exactly do you want to stash in the trunk?

You have received some very decent advice- but it's all speculation (including mine following). You can probably get by with a dash light, if the law and your car insurance authorizes you for it- an electronic siren, a lower power radio, like a Maxtrac and maybe alternating flashers when you lift up your trunk so you don't get waffled on the roadside. If you want to charge a radio, cellphone, flashlight, portable suction unit or an AED, I'd suggest taking them inside, plugging 'em in and carrying it out with you for the call, otherwise trickle charging only when the car is running and the buff gear is off.

For my "free advice" (worth what it costs, you know)- Forget about bar lights, "Aerosticks," a heater for the drug box, etc. or you're liable to not start your car when somebody needs you (been there, done that, went to a few calls on a bicycle a few years ago. I don't think I could do that balancing an AED and a portable suction unit on the handlebars; I don't think I could do it for fires, though... wearing boots, turnout coat & helmet... on the old ten-speed, all I'd have to do is make siren noises and flail my arms at drivers as they passed me - oh boy! <smirk>).

But seriously, an emergency response vehicle, like the ones that are custom built by departments' shops or commercially built by outfitters like Odyssey have major reworking, especially in the electrical system! I wouldn't expect to have a large radio deck like some paramedic units have, a full lightbar or anything like that in a Tortise. In the city I just worked for, Tortises are assigned to inspectors, administrators, etc. who go from place to place on a schedule, not respond to fires or medical calls. They are cheaper and

they don't have all of the other equipment. If you really want a car set up for a big electrical load, you probably could pick up an old police car at an auction. They're made a lot differently than your car.

My own vehicle, an old full-size blazer, has blown an alternator or voltage regulator every two years or so since I've had it because I HAD all sorts of junk (Syntor-X for Low Band, Icom for Hi Band, Syntor-X 9000 for UHF, Spectras for 500, 800 and 900 MHz, sealed beam lightbar, flashing headlights, flashing tail lamps, siren, strobe pack for grille/ intersection lights, etc.), along with my love for climate control, a stereo and the electric rear window. Yes, I put in a slightly bigger alternator and a bigger battery, but that's not quite enough. For what I had in there, I needed much more and still blew the regulator on a fairly regular basis and opened a winding in the alternator once in a while.

I had to take the thing apart to do a rust-rot refurb on it (duct tape & spray paint only got me so far) and only put back what I needed, scaling the truck down considerably (The wife thought it looked ridiculous and I needed more space for my 3 kids... can you believe- it looks almost *normal* not like "240 Robert" anymore !). I haven't had any trouble since (truck & wife).

You can build almost anything by throwing time and money at it. At what point do you exceed practicality?

Whatever you do, fuse ALL OF IT near the battery so if something shorts out it won't "catch up," just blow the fuse.

Good luck, whatever you do, how ever you do it, it's still your car. Don't get into trouble having "unauthorized" equipment or destroying an otherwise good car.

5980. Commodore Printer Repair Tape

Newsgroup: rec.radio.amateur.misc

Hello, this is Harry Miller KB6CGG in California. In going
through my junk the other day, I found this instruction
video on the repair of the Commodore Printer Model
1541. If anyone is interested in it, the price is $10 mailed.

Email me or call me at 805-528-0261 any time.

Tnx es 73, Harry KB6CGG

Gather up your old lightbulbs, cordless phones and car batteries. These are always in demand.

Be sure to pack any project that you started but were unable to find a critical component for. This you will advertise as "almost complete".

Practice stopping short. This means walk around public places and suddenly turn and walk into the person in back of you. Be sure your breath is stale.

Be sure you are up on the modern terms, like "by gosh", "by golly", "oh golly" and "golly gee whiz". You never know if Howdy Doody will be there signing autographs.

Arrive only after mowing a lawn or rebuilding a transmission in a hot garage.

Remember these are formal ham occasions, so get out your best plaid pants.

Be sure to spend only money intended for your child's education. This will provide you with months of discussion to prove you're a rebellious parent on the 2 meter repeater.

Practice your logical negotiation skills. Be ready to offer 200-300 dollars less than asked by a seller "because there is no box and I won't know until I get home if it works."

Hire a speech therapist for a few hours. Hams only speak clearly when behind microphones.

A LIGHTER LOOK AT FIELD DAY--SOME TIPS

You can compress the diameter of your rolled up QST Ham Ads by running over it with your car. This technique may also be used to jack your car up to replace a tire.

You can get rid of unwanted (ie casual or hobbyist) ops by eating Mexican food, then breathing on them at close proximity.

In emergency situations, you can survive in the wilderness by shooting small game with a slingshot made from the elastic waistband of your underwear. Be sure your underwear is clean and no one sees you. No one wants to see a ham without his Daffy Duck Underoos on.

The guitar at the next campsite means these people aren't hams and may be normal. See Mexican food idea.

A large carp can be used for a substitute for the old ham who always smells funny but couldn't operate this year.

Check the instructions before purchasing any apparel to be worn on Field Day. Be sure it says FOR USE BY GEEKS ONLY.

Effective January 1, 1998, you will actually have to enlist in the ARRL to get a woman. Contacts with lesbians do not count for bonus points, however.

Ham landscaping- an unregistered car surrounded by weeds.

Obvious signs that a ham's going to a wedding- his clothes don't have his callsign on them.

A romantic weekend for two- a ham flea market and a nearby Arby's.

Visit thetechteacher's website and you will see:

-How the usenet users can help you.
-A genuine ham experiment you can try in India or Pakistan.
-A real antenna used by a radio "hobbyist".
-And if that doesn't get your zoning boards attention, a sample proclamation you can use to waste your government's time.

>repeaters here operate on 146 - 148 MHz.

True, but the 144.5 to 145.5 MHz repeater subband is filled in most
metropolitan areas too. So he can access about 1/3 of the repeaters
on 2m.

>For 430 MHz, we use 440-450 MHz, not 430-440 (i.e. your transceiver
>from Germany will be useless to access the repeater).

Also true. And if he's operating under an alien amateur operator permit,
he's limited to operating only the subset of those bands available both
here and in Germany. In other words, even though 146-148 and 440-450
are amateur bands here, if they aren't in Germany, he can't use them
here either. That's covered in 97.107(b). So even if his radio covers
the required frequency range, he may not be allowed to use it in that
range. (He can sit a US Tech exam and get a US license, of course,
then he can use all US frequencies on 2m and 70cm.)

>>In Germany normally you open the repeater with a 1750 Hz tone for 1 second
>>and then you can speak. The shift at here is -600Hz.
>
>you also need to have a tranceiver that has CTCSS capable if you wish
>to access the repeater which uses CTCSS (i.e. 100.0, 103.5 etc.).

True again, you're scaring me CB. But not all US repeaters require
CTCSS. Many are just carrier operated, IE they'll retransmit any
signal they hear. The shift is -600 kHz for repeaters in the 144.5-145.5
and 146.0-147.0 range and +600 kHz for repeaters in the 147.0-148.0
range (repeaters on 147.0 can go either way, local option). On the
440-450 repeater subband, the shift is +5 MHz. This isn't a regulation,
and there are some repeaters who don't follow these shifts, but they
are pretty standard in the US.

I must ask why your department and your city/county allow a privately owned vehicle to be dressed up as an emergency vehicle? If you have passed your state's emergency vehicle driving course, then why aren't you assigned a departmental vehicle in which to respond (i.e., a vehicle designed for such service)?

It's no wonder folks in the profession ask why full-time regular-salary emergency workers look down on the part-timers cruising town in their pretend emergency vehicles.

You know boys and girls it seems rather strange to me that Rich (aka Porkbutt) is still living the life of leasure in SC. Now lets consider this folks, if indeed there ARE warrants for him, as put out by the Stumpers, then answer me this....why has he not been busted? He is not exactly hiding out anywhere. Hell he is on 20 meters, 75 meters 6 meters on a daily basis. His call is known worldwide (wb2otk). He is up here on the internet, using his name and his call on a daily basis. Now we all KNOW that if this so called warrant was real, then the stumpers would bust their collective butts to get it inforced. So I ask again....why is he still here? Think maybe it might all be a bunch of BS from the enemy camp?

You need to check your history. The nation of Islam came long after
Christianity. They borrowed from the Christianity. By the way how much
does the Nation of Islam have in comman with other Islamic groups? Not
Much.

To solve the drug problem, racism, and other problems, the world needs
to turn to Jesus Christ, and live according to biblical standards that
have been around for thousands of years. Promise Keepers is attempting
to restore to men the Christian Biblical Standards. Jesus Christ is the
Way and the Truth. If anybody tells you differently, then they are
wrong.

Read my comments again, fat boy. I didn't say I wasn't licensed. There is a
difference between being LICENSED and being an active OPERATOR.

Now, go do a few miles. It's good for you.

Sorry, Hanoi Dan, but we do not know that the person posing as
"richwhiten@aol.com" on this newsgroup is really who he claims to be.
Personally, I rather doubt it. In addition, he has never used his call on
here.

Um, isn't it a bit pretentious for you to *assume* that all municipalities
provide this equipment for the use of these people? My home town had
an all volunteer fire department -- which provided ambulance service
as well. Aside from the actual "fire trucks", the town owned *no*
other vehicles. "Volunteers" contributed their time (!) as well as
their own transportation, etc.

No, you couldn't just put a light on the roof of your car and call yourself
a "volunteer" -- certification *was* required. And, for anyone *else*
in town to use such an "emergency" light was as illegal as dressing up
in a police officer's uniform would have been.

>>It's no wonder folks in the profession ask why full-time regular-salary
>>emergency workers look down on the part-timers cruising town in their
>>pretend emergency vehicles.
>>
>>Jeff KH2PZ (former Southern California fireman)

Ah, yes... "California".. where money grows on trees -- but municipalities
like to default on their bond issues! :>

A hearty thanks to those folks who really do *serve*... in spite of the
fact that *they* have to pay to outfit their own vehicles, etc.

Please check out our webpage at:
http://www.apex2000.net/personal/wd5cwj/main2.htm
If you haven't been to this West Texas hamfest, maybe now's the time!
This is our 15th year of CONTINUED GROWTH! While other fests have
dropped in attendance, we have grown. AND, this year we have ONLINE
registration! You can register for the major prizes via internet. You
don't have to be present to win the Grand Prizes. You do, however, have
to be present to win Door Prizes...of course.
If you would like to be on our September flyer mailout, please send
your mailing address to me before August 1st and I will insure that you
are included in our regular mailing for the November 7th & 8th Hamfest.

> need of a duplexer?

Yes, if you have a receiver with a decent front end you can make it work, the problem is your transmit
power is limited to a couple of watts, what you end up with is a working system for experimentation but
not very usable or practical and I think you would quickly tire of it. If you have a friend within a mile
or so you can link the tx and rx sites via a UHF link, which provides the greatest separation,
unfortunately your back to the cost of a good duplexer. Ryan, I get a feeling your searching for some
shortcuts here to putting up a repeater, there are none, I know because back in High School some friends
of mine tried the same thing, using two antennas, no duplexer, old scanners for receivers, 555 timers for
time-outs etc. If you want to do it for the purpose of experimenting and learning then go for it, you'll
learn a lot, like how cheap receivers and transmitters add up to incredible amounts of noise on the
output. It was fun though, we had a ball running 30 second 8 tracks as brag tapes and ID. The wiring was
a real bowl of spaghetti. You'll quickly see though that it takes a lot of effort and money to put a good
system on the air. If you intend to run any sort of power separation is a must whether physically or by
notching the rx by use of a duplexer.

Most Americans favor stricter gun laws - poll

WASHINGTON (Reuters) - A majority of Americans, including more than half of the country's gun owners, want stricter gun control laws, a poll said Wednesday.
The poll, conducted by Louis Harris and Associates, found that 69 percent of all adults favor ``stricter gun control'' compared to 23 percent that want ``less strict gun control.''
Among gun owners, 57 percent want tighter gun laws while 32 percent want an easing of gun restrictions, the poll said.
An even larger number of Americans, 76 percent, were in favor of creating more restrictions on hand gun ownership, the poll said. Two-thirds of gun owners want stricter hand gun laws.
The poll also said the percentage of gun owners has dropped in the last 25 years. In 1973, 48 percent of of adults had guns in their homes compared to 32 percent today, down from 40 percent two years ago.
The data was compiled from telephone interviews of 1,011 adults between April 22 and April 27, about one month after a shooting at a Jonesboro, Arkansas, middle school that killed four students and one teacher and wounded 10 others. Two boys, ages 11 and 13, were charged in the attack.
The poll numbers reflect an attitude about gun control that has been prevalent in America for years, said Robin Terry, spokeswoman for Handgun Control Inc.
``There has been a somewhat silent majority for some time on this issue and there has been a very vocal minority,'' she said ''Because of recent events people have reached the point of outrage that they are no longer willing to be silenced.''
Most people are unable to judge if gun laws should be more or less strict because they are not knowledgeable about the laws that are already on the books, said Tanya Metaksa, chief lobbyist for the National Rifle Association.
``This poll measures the sorrow we all feel in the wake of a tragedy,'' Metaksa said. ``There is nothing more strict than a total ban and that is the current law in every school and every schoolyard in the United States.''

In article <35968318.69D2F00E@wf.quik.com>, Curtis M LaFon <n5hdq@wf.quik.com> writes:

> I have two questions.
>1. Is there a law here in Texas against brandishing a weapon ?

There does not seem to be, per se. I checked my out-of-date copy of "Texas Criminal Laws" from 1996 and found no reference to any state law against carrying a shotgun in public. The closest reference I could find is PC ss46.02, Unlawful Carrying Weapons, that bans only carrying a handgun, illegal knife, or club. Most laws pertain only to handguns, which are defined in the statutes as firearms meant or modified to be used with one hand. So, apparently unless there are county or city ordinances in a particular place barring the open carry of all firearms, and if there are no threatening words or gestures on the part of the armed individual, nor are any other laws being broken, there was no lawful reason to arrest the Panthers.

>2. If so, had the KKK done so would there have been any arrests ?

If any were found to have entered the courthouse with weapons, whether otherwise legally carried or not, they would have been guilty of a third degree felony and subject to arrest and seizure of the weapon(s). If they were legally assembled and anybody carrying a conceaed weapon had a license issued by the State of Texas or had some other legal justification to carry, then no, there could have been no arrests.

Don't assume that my opinions or observations are infallible... I am just going by the Texas Penal Code. Also, I am no lawyer. Municipal codes of Jasper might throw a wild card into the deck. I notice that there is no mention of Disturbing the Peace or Brandishing aWeapon in the book, so I guess it is up to individual municipalities whether or not there is such crime, and the definition of the crime.

Laws restricting the ownership, possession, and use of firearms passes by local entities often run up against challenges of constitutionality. Remember, the states themselves have their own constitutions, and often the rights of gunowners are protected by even more strongly worded language than that contained in the U.S. constitution. I am a bit ashamed to admit it, but I do not have a copy of the Texas Constitution at hand, so I can't predict the likelyhood that Jasper has any sort of anti-gun law.

I know there are no particular restrictons here in San Benito, though it would be considered very poor manners to openly carry a loaded shotgun while walking down Sam Houston Blvd for no particular reason, and the local cops would definitely be curious as to what the shotgun toter was up to, and would not allow him to proceed until satisfied that everything is cool.

Yo doorknob! You obviously have no idea what you're talking about and you take everything you say for granted.

Since you live in Montreal you might try the largest newspaper in the area, the Montreal Gazette. There is an article on page 2 for crying out loud! How much more newsworthy would you like to get?

Also, in case you didn't notice (which you probably didn't), Field Day also made the local news on television (once again, on a major television network).

Field Day is newsworthy. Don't say it isn't.

p.s. These two are only the most important of examples. There were also many local publications that carried information on it.

SB DX @ WW $OPDX.363
Ohio/Penn DX Bulletin No. 363

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 363
BID: $OPDX.363
June 29, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K8YSE, KF8TM, NE8Z, WB8YJF, W8CNL, DL2HEB, EA5GRC, EA5KY, F5PHW, G4BUE & DX News Sheet, GM4SUC, LU1DZ, LY1DR, LY3BA, ON7ZV, P43P, PA3DMH, VE2CY, ZL1RS and ZS6Y for the following DX information.

1A0, SOV. MIL. ORDER OF MALTA. Activity by a station signing 1A0KM on 20/15 meters, June 13th, was a pirate. This has now been comfirmed Francesco, IK0FVC. Generally there are announcements in advance if a 1A0KM operation would take place.

ECUADOR DXPEDITION. Rick, NE8Z, will once again be returning to Ecuador for a 3 week visit from July 5-26th. He will be traveling to different areas in Ecudor using the following callsigns:

HC1MD - QTH: Amaguana
HC1MD/HC4 - QTH: Atacames/Pacific beach area
HC1MD/HC4 - QTH: IOTA SA056, "La Isla" in the Esmeraldas Province Group
HC1MD/HC5 - QTH: Cuenca
HC1MD/HC6 - QTH: Cotopaxi Volcano
HC1MD/HC7 - QTH: Amazon Jungle/see the QTH & family rental resort at: http://wwwpub4.ecua.net.ec/sierrazul/

He will be using a Kenwood TS-50/AT-50, Heath SB-200 AMP, Cushcraft R-7 Vertical and AEA PK-232MBX for RTTY. His activity and operations will be mostly on the WARC bands CW and 20 meters RTTY. From "La Isla", IOTA SA-056, he will operate as HC1MD/HC4 for 8 hours on either July 22, 23 or 24th from 1500-2300z only on 21260 or 14260 kHz SSB. John, WD8MGQ, will have full information as to which day he will activate SA-056. He can be reached daily on 14260 kHz or via E-mail at: wd8mgq@tir.com The IOTA trip will be planned according to the weather and malaria conditions in the area. All of Rick's CW/RTTY operating as HC1MD/HC4 will be from Atacames on the mainland between July 19-25. Thanks to

Bill, W8HVX, who has helped Rick set up for his first ever RTTY transmissions from Ecuador. It is suggested to watch 20 meters mainly for RTTY. Bill will have regular contact with Rick and can be reached via E-mail at: w8hvx@ismi.net -- All QSLs should go via: K8LJG, John Kroll, 3528 Craig Drive, Flint, MI 48506 USA (John E-mail address is: k8ljg@tir.com). A short story and photographs will be posted after the trip on the new Web page for the Southeast Michigan DX Association (SEMDXA) at: http://www.semdxa.org/

IOTA NEWS....
AF-010. Elmo, EA5BYP/3C1BC, and Vic/EA5YN/3C1PN, will be on Bioko Island from June 30th to July 7th using the callsign 3C5DX. They plan to be active to 80-10 meters CW/SSB. The QSL via EA5BYP. ADDED NOTE: The new color QSL for 3C1GS is back from the printer. All the cards received will be answered once Elmo returns back from Malabo.

EU-032. Phil, F5PHW, will be on holiday from Re Island and will be active as much as possible during all of August. Re Island also has a reference number of DIFM AT-022 (French Islands Awards). He reports that he will be active almost on CW (90 per cent) and sometimes on SSB or RTTY. If asked, he will QSY to SSB or RTTY when possible at any moment. He states EU-032 is not very rare, but has made around 5000 QSOs since 1991. Activity will be 80-10 meters using the callsign F5PHW/P. Phil may also be active in the IOTA Contest (if his boss lets him!) as a Mono Op 12 or 24 hour CW entry. QSL via F5PHW, bureau or direct to the address: Berger Phil, 19 Rue de L'Embellie, 56100 Lorient, France (Only to this address. Address in CBA not available).

EU-039. The Belgian DX Pedition Committee will head to this rarely activated French Island called Chausey Islands to take part in the next IOTA Contest on July 25-26th. The Chausey Islands also has a reference number DIFM MA-004. The Belgian team will be composed of ON1KSZ/Stef, ON1MCT/Phil, ON4LAM/Mike, ON4LCW/Maxime, ON5PV/Phil, ON5OO/Jack, ON6QR/Fred, ON7LX/Carine, ON7PC/Pierre, ON7RN/Eric, ON7TK/Claude. They will be using the callsign TM5T. Because of the special regulation of this Island and the prohibition of any tent or camping, they had to receive permission to use an official building and the use of poles and beams. Two stations will be set up, one running and one multiplier station both connected to beams, verticals and dipoles during the 24 hours of the contest. They will be operating both CW and SSB on the 5 bands during the contest. The QSL Manager is ON4GO/Mike. Before and after the contest, listen near the IOTA frequencies and on the WARC bands. Also, look for F/ON4LCW during July. He will activate a lot of little islands from the Chausey archipelago counting for the French islands award DIFM. For more information, contact Fred, ON6QR, via E-mail at: on6qr@ping.be Or check out the Belgian DX Pedition Committee's Web page at: http://www.ping.be/on6qr

EU-123. The Ayr Amateur Radio Group is going to be active from the Lighthouse on Ailsa Craig in the Firth of Clyde (IOSA CL-5). Activity will be from 0900z until 1830z on Saturday, July 18th, with the callsign GS0AYR/P. Activity will be on all bands with three stations. QSL via GM0JHF.

NA-062. Dave, KF8TM, will be active from Florida Keys (Cudjoe Key) July 20-30th. He will be active on 40-10 meters CW as KF8TM/4. Dave will also participate in the IOTA Contest as a 24 hour CW entry. He will be using a TS-450, AL811 and R-7000.

NA-067. Jon, WB8YJF, will be active from Ocracoke Island, N.C., from July 25th to August 1st. Activity will included the IOTA contest. This island also has a reference number of USI NC-001S (United States Islands Award). Operations will be on CW, RTTY, and some SSB. QSL via his home call: Jon Severt/WB8YJF, 5586 Babbitt Rd., New Albany, OH 43054. His E-mail address is: wb8yjf@juno.com

NA-128. Joe, VE2CY, will be active from Ile Aux Coudres from July 13 to 23rd, during his vacation. People can set up a schedule by E-mailing his home address: willis@writeme.com

KH4, MIDWAY ISLAND. The "DX News Sheet" reports that Ted, NH6YK, will be active again about August 1-15th, as KH4/NH6YK while visiting his XYL who is stationed here. Activity will be on HF and 6 meters. More information is to follow. QSL via home call.

LA, NORWAY. Ulli, DL2HEB, reports that he will be active between July 19th and August 3rd from Norway and some Norwegian islands with his QRP-Rig using the callsign LA/DL2HEB/p. Operations will be only CW and possibly some Amtor/Pactor. He will also take part in the IOTA Contest, probably from Gurskoy or Hareidland islands (both in EU-079, that is the Soroyane Group).

NOT ZS8, PRINCE EDWARD & MARION ISLANDS! Ed, ZS6Y, informs OPDX a lot of individuals are getting the impression that ZS80NRM is operating from ZS8-land. He is NOT. Ed is operating from the Republic of South Africa.

OOOPPPSS! Last week we mentioned Mark as ON5WW, this was wrong. Mark, who was active as S07WW this week is ON4WW, not ON5WW.

P4, ARUBA. The Aruba IARU Member HQ Station (SA, ITU Zone 11, IOTA SA-036), will be active during the 1998 IARU HF Contest weekend July 11-12th. The callsign P43R will be active on all bands SSB/CW, and a special QSL card will be printed for the 1998 IARU HF Contest. QSL via P43ARC or Bureau.

POLAR BEAR DX-PEDITION 98. Operators Aldo/VE3IMR/VA3AG, John/VE3VGI, Paul/VE3KBL, Garry/VE3XN, Bob/VE3LLE, Don/VE3UNA, Doug/VE3BKR, Craig/VE3CIJ, Lyle/VA3DXE and George/VE3INB will start a DXpedition on Sunday, August 18th, 2230z, at Toronto Union Station. They will be operating from the Ontario Northland Railway's " Northlander" under the callsign XM3PBX. They will operate until they arrive in Cochrane, Ontario. They will then transfer XM3PBX to the ONR's Polar Bear Express

to Moosonee. Once they arrive in Moosonee, they will setup XM3PBX at the ONR's Moosonee train station and operate from there. Two from the group will move their gear to the Moose Factory Museum and operate a station from there under the callsign CH3HBC/325 to celebrate the 325th anniversary of Moose Factory. The Moose Factory station will be operated by Bob/VE3LLE and Lyle/VA3DXE as the main operators with some help from the rest of the group. John/VE3VGI and Aldo/VE3IMR/VA3AG will be flying up to Charlton Island to operate an IOTA island under the callsign of either VE8C or VE8I. The call hasn't been determined yet. There is also a fourth station, CI3XXV, that will operate from various freshwater islands (weather permiting) under the callsign CI3XXV/25 and maritime mobile CI3XXV/MM from the M.V. Polar Princess out of Moosonee. This will continue until Saturday, August 22nd, when all stations except XM3PBX and CH3HBC/325 will cease operation. CH3HBC/325 will continue to be active until the end of August, being run by local hams, Paul/VE3KBL and Craig/VE3CIJ. On Saturday, August 22nd, they will leave Moosonee on the Polar Bear Express operating XM3PBX as they travel southbound until they reach the final destination at which time the Polar Bear DXpedition will cease all operations. They intend to operate on 40, 20, 15, 6 and 2 meters. For updates, check out the Polar Bear 98 Web site at: http://webhome.idirect.com/~galati

QSL INFO AND NEWS....
K8OU ADDRESS. Those looking for the QSL address for the FO0MAC and FO0PAP, here it is: EIDX Network (Trustee K8YSE), 4910 Royalton Rd., North Royalton, OH 44133-4049

Argentina postage rates UP. Alberto, LU1DZ, reports that effective June 13, 1998, International Postage Rates have been raised in Argentina. Now it requires 1 U.S. green stamp to send mail to the boundary countries, 1.25 U.S. green stamps to other American destinations and 1.50 U.S. green stamps to other parts in the world. So, one green stamp is no longer enough. Please note the change...!!! Alberto also states that the the LU1ZC QSLs are coming soon...!!!

KH0/AF4FL QSL ROUTE. Ray, W8CNL, reports he is receiving cards for KH0/AF4FL. He is not the QSL manager for KH0/AF4FL. QSL via home callsign.

SPECIAL EVENT. Commemorating the 2nd National Olympic Games, the Worlds Lithuanian Sports Games and National Folk Festival from June 22nd to July 6th, a number of LY stations will be using the special prefix LY98. Some stations already active are: LY98BA, LY98DR, LY98DT, LY98FW, LY98TX and LY98TZ. QSL LY98DR via LY1DR, Saulius Zalnerauskas, Box 922, Kaunas, 3005, Lithuania. QSL LY98TZ via LY2TZ. QSL LY98BA via LY3BA: Gediminas Lucinskas, P.O.Box 34, LT-5280 Birzai, Lithuania.

T8, BELAU. Hide, JM1LJS, will be active as T88LJ between July 26th and August 2nd. Activity will be mainly on: CW 7008 and 10104 kHz and SSB 3840 kHz. QSL via home call.

TL5, CENTRAL AFRICAN REPUBLIC. Alex, PA3DZN, recently became active from Bangui as TL5A. He will be active on 160-6 meters, CW, SSB & RTTY. QSL via PA3DMH: Alex van Hengel, Schoener 85, 2991JK Barendrecht, The Netherlands. Also, QSL is OK via bureau. Log Search is available at: http://www.igr.nl/users/pa3dmh/logs/log_search.html and will be updated on a regular basis.

VK9, WILLIS ISLANDS. Look for Graeme, VK5GW, to be active as VK9WG for the next six months beginning July. QSL via home call.

ZA, ALBANIA. Luis, EA5KY, will be traveling to Lac, 50 km north of Tirana, July 3-18th, and will be active as ZA/EA5KY. He is setting up an amateur radio station for the Franciscans missioners. He mentions this isn't a Dxpedition. Geni, ZA1B, states he will not have problems working as ZA/EA5KY. Luis will try to be active on all bands 80-10 meters on his free time. His equipment is a TS-50 and dipoles. Suggested frequencies are:
SSB - 14190, 18145, 21195, 24960 and 28490
CW - 14020, 18075, 21055, 24895 and 28020
RTTY - 10105 kHz
There may be 80 meters activity if conditions are good. QSL via EA4URE, bureau or direct. They will be answered at the end of his activity.

ZL8, KERMADEC ISLANDS. Bob, ZL1RS, reported earlier in the week that "Everything is going to plan, and later this week I am departing for Raoul Island (Kermadec group)." By the time you read this, Bob should be operating between his work commitments from Raoul until July 15th. He states, "I'll TRY to get on as much as I can ... especially nearer the end of the trip when my work will be finished." Watch out for ZL8RS mainly on SSB, with a little (slow) CW on 160 and 30 meters. Lee, ZL2AL, has kindly loaned Bob a laptop computer so there will be some RTTY. Also, Bob finished building a compact 8877 amplifier to take along. He states, "Please note that the generator power supply is SUPPOSED to be off from 1100z to 1900z. There is nothing I can do about that. Any operation between these hours will be battery powered and "QRP". Bob provides the following POSSIBLE operating frequencies and times (all subject to change due to his work schedule):

160 meters - CW on 1828 (RX up 2 khz and higher for JA). Listen for his CQ at 0505z (ZL8 sunset) and 1845z (ZL8 sunrise at 1850z) for 10 minutes. There will be an announcement of moves to 160m from the higher bands to call CQ for 5 to 10 minutes periodically between 0700z and 1100z.

80-10 meters - SSB on or near the usual DX frequencies, around 0700z to 1100z initially, other times as work allows, particularly at the end of the trip and on any "days off" that he manages to have.

30 meters - CW on 10120 kHz. Remember SLOW CW. (Patience/tolerance!!)

10-6 meters - 29495 and 50110 kHz. He will leave the radio running
in the background WHEN he is working inside during the
day. A CW CQ beacon on 50110 kHz is likely, break in on
SSB or CW.

I actually tried this once. I recorded a packet message using cd quality
sound and replayed it over the radio.

It works perfectly at 1200 baud.

The IC-706 is a very good radio from ICOM. The reason it is being sold
so much is that ICOM came out with the IC-706 MKII which has a few
(non-critical) improvements, most importantly the space for two filters.

If you're big on HF (both CW and SSB) you may want to consider the 706
MKII, however if you're active on 2m, 6m and HF voice only the 706 is a
fine radio.

>Unlike you our students can listen to a scanner AND work.

That must do wonders for their study skills. I would suggest that
you turn off the scanner so they can focus their concentration
on the radio repair work at hand, especially if the equipment is
powered-up. As you well know, there are no second chances when working
with electricity.

You never answered my question - just what was wrong with the scanner
all your students were "working" on?

>Can you walk AND chew gum, AT THE SAME TIME?

It's always easy to see when your're getting PO'd - the caps key comes
into play.

He did nothing of the sort, Burp. This is USENET, not amateur radio. Since licenses and callsigns are not required here, there's no possible way he could have been "operating under (your) call."

Kinda sucks when the shoe's on the other foot, eh, Burp?

Hey "Burt1",

Where were you when worse was said ? Don't bitch about the Confederate Field Day do you ? How about gays ? Hey guys, let's see:

Why does Burt1 live in lilly white Mass. ?
What Burt1 would do if his kids dated black people ?

If it is you using that stupid Burt1 addrss (guess whoever you are you got beat to the "real" addresses by other people) LibNet is right. You of all should know WE'RE NOT ON THE RADIO. BUT IF THE SHOE FITS assume the rest of us mean YOU.

BUT YOU'RE NOT THE REAL BURT, HE'S TOO CHEAP TO PAY FOR A SEPARATE INTERNET ACCOUNT WHEN HE CAN GET IT FOR FREE.

Gentlemen,

Having engaged in correspondence with the defamed k1oik@mindless.com, all posts, I assure you, are parody and satire at their finest.

How indeed could a fan of the late Sammy Davis Junior be "anti Jewish" or "anti black", when by Sammy's own admission he was "the little black Jew" (his words, for persons too dense to understand).

Bull hockey.

Raul Bloodworth, esq.

>Thanks very much! Would there possibly be a way to seperate the antennas far enough apart without the
>need of a duplexer?

Try this: Use two ground-planes, vertically separated by several wave-lengths. Invert the bottom ground-plane to help isolate the transmitter's emissions from the receiver.

I made a crude rptr utilizing a Heath HW-202 transceiver. The xmit and rcv boards were already isolated from each other (the rcv board was above the chassis, and the xmt board was below). Additional shielding was added so as to enclose the PA board. The only other steps needed:
1. remove the rcvr from the PTT relay so it operated continuously
2. add a second antenna connector
3. add a Carrier Operated Relay
4. add a motor-driven code wheel / lever switch "for ID" (HI HI)
5. add a time-out timer using another motor with a cam and a lever switch (with a spring return to reset the motor's shaft once a carrier was dropped)

Control was accomplished by utilizing the phone lines and a stepping relay. Each ring of the phone at the rptr site advanced the relay one step, thus enabling or disabling (via latching relays) a particular function. My "textbook" was Ken Sessions' Repeater Handbook (circa late 60).

I sure had lots of fun with that project.

I certainly like mine and use it daily as a mobile rig. The things which are most attractive about it are the size, and the ability to remote mount the very small control head, and what I consider an inspired user interface for the mobile operator. It is simply very easy and natural to operate in a mobile environment where you can't divert much attention from your driving.

Of course it isn't a perfect radio. Icom cut some corners to make it that small and cheap, and they pulled a couple of really stupid boners in the design (fortunately easily fixed). The noise blanker is one of those boners. They picked off the signal for the blanker *after* the narrow filter instead of before it. That's easy to correct. And they totally botched the VHF out of band receive filter. That's easy to fix too (fixed in the Mk II from the factory).

Some people complain about insufficient microphone audio, but that's just because they aren't used to a mobile mic that needs to be close talked (and I mean close). That gives it a very desirable noise cancelling quality in a mobile situation. If you want to use it at home, you might be happier getting a desk mic like the SM-6 for it.

The transmitter is very tolerant of abuse. It has good thermal design and good protection. The receiver has some filter blowby due to the design, but that's rarely a problem in mobile operation where strong signals simply aren't that strong due to the relatively inefficient mobile antenna. It can be an annoyance for home use on a better antenna.

I've made a lot of contacts with mine, and generally get good signal reports (for a mobile), and have little difficulty copying stations. As is typical in mobile operation, I can hear more stations than I can work. That tells me the receiver is "good enough".

I also use the radio for mobile digital operation, and it performs adequately there as well. The good thermal design lets it tolerate the heavy transmit duty cycle, and the small tuning step lets Clover signals be easily tuned. I have the 500 Hz filter installed, and fool the rado firmware into thinking it is the SSB filter so

I can use it with the FDM Clover signal. This works very well. The FSK mode of the radio works well too when I want to operate PACTOR or ordinary RTTY.

I didn't trade up to the Mk II when that came out since I'd fixed the major problems of the original myself, and the internal DSP isn't that hot anyway. But apparently a lot of people did, and that's one reason you see so many IC-706s for sale. I expect that others tried to use it as their primary home radio and found it was not quite as good as they wanted for that.

It should be viewed as a mobile rig, and as a mobile it is excellent. But it isn't a top line home rig. There wasn't enough room in the box to make it that. Among its peers, the itty bitty HF/VHF rigs, it is still an excellent value. When you compare it to bigger radios, it can't play in their league.

And they did another poll. 68% of those polled said that they would not vote for politicians that favored gun controlled. So what's in a poll.

Just remember, when the revolution comes, people like you will be first up against the wall.

Take care.

Dear Friend Shiv,

You are asking many VERY BIG questions all at the same time..

Try to get to a public library and look on the shelves for small Amateur Radio Operating books. There may be Amateur Radio Antenna books. Also radio propagation books. Also books for radio learners. You may also find such books in the bigger book shops.

There are English language handbooks with all the answers, obtainable from -

American Radio Relay League, ARRL HQs in Newington, Connecticut, USA,

Also from Radio Society of Great Britain, RSGB Hqs in Potters Bar, London.

why ? CWers say they love CW and they say know code = know ham.
If I post the articles saying no code amateur radio ! etc., I get
complaints so I decided to support CW as follows:
----- Allow code only amateur radio !! ----- Support code now !!!!!
Punching the CW keyers only is the fun part of amateur radio !! Help
us by reducing the number of amateur radio operators and help to
destroy amateur radio spectrum !!!!! CW rocks !!!! CW only in
amateur radio now !!!!!!!!!!!!!!!!! Ban voice to kick the idiots out
there and not to attract public's interest (be protective now
!!!!!!!!!!!!!!!) !!!!!!!!!!!!!!!!!!!!!!!!!! Code only now
!!!!!!!!!!!!!!!!!!!!!!!

I just want to see amateur radio dies out by the CW itself. I am grad
to support CW now. know code = know ham. simple as that !!!!!

Dear Burt,
Eventually I hope you will consider checking yourself into a program
which offers the help you need to move your life forward. There are
many facilites that will help you and maintain your confidentiality,
so you needed worry on that front. Your fellow hams and employer will
never suspect that you are under care.
Please don't listen to those who talk as if they know you and your family
personally,as I'm sure none of the things they say about your past is true.
You, with the proper guidance and care, can forgo your preceived necessity
to utter vile and demeaning things toward others.
Hopefully you will take this is the spirit in which it is written and
close this dark chapter of your life and brighten your own and your
loved ones lives as you move to the future.
Wishing you the best.

>

Dan/W4NTI....the "Forrest Gump" of amateur radio
needs a few lessons in basic law.

The reason they don't come after Pork-Butt is
because he's accross state lines. Now the
time he chooses to go back to Florida, we could
inform Florida authorities if we should know his
location.

We could also get a bondsman to haul his large
pork-butt back to Florida. But the bond amount
is so small, we couldn't get a bondsman to take
it unless we sweeten the pot!

Again, I think we should have a real organized
effort to send "donations" to a bondsman in SC.
If we could offer the bondsman $500 to $1000 more
for his efforts, I'm sure they would haul Pork-
Butt in for us.

Let's start a fund raising effort! Who could we
trust with the money? Might I suggest that
KC4TR might be a good idea. He's a reputable
businessman, a pillar of the community and has
the ability to locate a willing bondsman.

I will be the first to donate $100 to the "Let's
Jail Pork-Butt" fund!

Come on, guys! Let's shut this idiot up!!

>How much does a very cheap 2m duplexer go for?

Well, it depends on what you're looking for... Standard
repeater duplexers are available used for roughly $250-$400.
When new they run in the range from $800-$1,400.

For a 5w HT (which is what I believe you said you were going to use,
you're going to want something that provides around 70dB isolation minimum,
which 80dB or higher preferred. You might be able to use a mobile duplexer...
These tend to be under $200 used...

Interesting, too, how the local officials and law enforcement seemed to have no trouble with the Black Panthers being armed to the teeth. If the situation were to have been reversed (armed KKK vs unarmed Panthers), I guarantee you would have seen The National Guard being brought in to "protect" the blacks.

6076. Field Day a Bust !

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-28 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6n5vvsilh1@nnrp1.dejanews.com>
Source record: 168605

The Inner City Amateur Radio Club of Washington DC had its Field Day cut short on Sunday when federal agents acting on an anonymous tip swooped in and arrested its members for possesion of crack cocaine and stolen radio equipment.

Said Club President Mustafa Abdullah Tyrone Jones, "yo man we was set up by the PVRC".

Until the time of the arrest, Inner City ARC had been in control of the 75 and 40 meter "'hoods", largely through the threat of post-contest retaliation.

The LARC, a group of gay, bi-gay, bisexual, transexual, transexual gay, bitransexual gay, transbisexual gay, transbisexual, repressed and in closet radio amateurs and their "friends", rose to the Field Day challenge with more bravado than the Village People on Sunday.

While singing "I've Got to be Me" and serving complementary quiche, LARC announced it's intention to sue ARRL if it was not allowed to win Field Day this year in the new Rainbow (1R,2R,3R, etc) operating class for all persons not fitting into the regular opeating holes.

No they are the result of parents who do not spend the appropriate time teaching thier children how to read, the responsibility of educating your child belongs to you, not the government, schools should be considered no more than a catalyst and not a substitute for good parenting. Read to your children daily, sit down with them and show them how to study. Let's take the blame away from poor teaching in schools and put it where it belongs, on the parents.

I have two questions.
1. Is there a law here in Texas against brandishing a weapon ?
2. If so, had the KKK done so would there have been any arrests ?

6081. Miami Jews to Operate Field Day

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-28 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6n60us$k0u$1@nnrp1.dejanews.com>
Source record: 168610

The Jewish ARC of Miami, JARC, is once again boiling up vats of Matzo ball soup in preparation for today's Field Day finale. Said Club President Dr. Saul Ben-Dover, a prominent Miami proctologist, "this is yet another day of Jewish togetherness, to remember who were are and that we will never forget". When this staffer reminded Dr. Ben-Dover, who is a wee senile, that today was Field Day and not another WWII anniversary service, Dr. Ben-Dover replied "oi vey, I've got spilcus in my gologaspiel. Please excuse me". We think he meant his traps are full of water.

Source record: 168611

Once again this year, Southern folk will get together at Charleston, SC for a good ol' Yankee ass whipping. This year club members are combining Field Day with a simulated Rebel encampment. Club Commandante Colonel Sanders said "well, sir, this year, sir, we, sir will be serving up fried chicken and catfish gumbo, yessir".

It may be recalled that last year elements of the 2nd and 5th South Carolina volunteers pushed deep into Pennsylvania, cutting Yankee coax wherever it was found. Rebels later surrendered at ARRL HQ, under a treaty that allowed them to keep their towers, climbing belts and Negro lawn jockeys.

Post Field Day dinner will be at the Charleston Sambo's (Arby's). Black Secret Service agents need not attend as they will be refused service.

I agree both groups are stupid, and the open display of weapons by the New Black Panthers was in poor taste. Don't think for a minute, though, that fewer than half of the Kluxers had their own weapons underneath those sheets. Anyone with no felony record, no history of mental illness, and no taxes owed to the State of Texas who is legally resident in the state can apply for a concealed handgun license, and the state MUST grant the license if the applicant is not found unqualified if he or she passes the required course of instruction, which typically lasts two days. While they cannot carry their weapons into the courthouse, I would bet a dollar to a donut that those who entered were not searched. At least the Klan guys had the prudence and good form to not have any openly carried firearms, but do not make the mistake of assuming that none of them were armed.

I am sure glad this thing is finally over. everybody got their say and their 15 minutes. I hope now that the world will leave the people of Jasper alone to get on with the business of living peaceably together as neighbors.

6086. FS: Pro-46 handheld scanner with extended coverage

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-28 00:00:00 UTC
From: "Jack T.Dragon" <tdragonn@blarg.net>
Message-ID: <3596187E.48BF@blarg.net>
Source record: 168615
Cross-posted to: rec.radio.swap,alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Recieves on:
29- 54mhz FM
66- 88mhz FM (after keypad trick)
108-137mhz AM
137-174mhz FM
406-512mhz FM
806-956mhz FM (unblocked)

Has 100 memories in 10 banks. Runs off of 4 AA batteries.
Included are the AC adaptor / charger, and instruction manual.
The restoration trick involves soldering SMT components,
I've allready done that for you. Plus, you can undo the hardware
mod and then do the keypad mod. "Oops, sorry about resetting it
like that officer, but as you can see, this can't do cell..." :)

It works just fine and has no problems.

Asking $140, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and don't
use this at all anymore. I need the money more than I need the
hobby.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,

Recieves on:
29- 54mhz FM
108-137mhz AM
137-174mhz FM
406-512mhz FM

Has 50 memories in three banks. "Private" bank holds 20
user selectable freqs, "Police" bank holds 20 user selectable
freqs and has a bunch of pre-set freqs that can be locked out,
"Fire/Emg" bank holds 10 user selectable freqs and has has a
bunch of pre-set freqs that can be locked out, "WX" bank does
all weather freqs, and "Air" scans the entire aero band.
Unit uses a mounting bracket, which was lost by the
previous owner. Not included. No manual, but I can instruct on
how to program it. Runs off of 12v DC, power supply not included.
Basically, just the unit itself. But it'd be a great
little thing to keep out in the car or truck.

It works just fine and has no problems.

Asking $70, or best offer. Remember, the price is open
to negotiation.

I'm selling because I'm currently between jobs and don't
use this at all anymore. I picked it up to put it in my car, but
never got around to doing it. I need the money more than I need
the hobby.

The *engine* can handily supply whatever you need in terms of *horsepower*.
Rather, the alternator and the motion transfer system (i.e. belts and
pulleys!) will be the issue (even replacing a small alternator with
a *huge* alternator won't guarantee that the belts, etc. will be able
to drive it fully loaded)

>> I will probably need to pull 10-20 amps on standby, which I know is no
>> prob. But on peaks, I'll probably need 30-40 amps. Will my car and batt
>> be able to handle this?!? I have a gold tap right off the batt terminal,
>> and three ten-gauge lengths of fuel/oil proof wire for the power.

Well, I'm not sure as to the "need" for the "gold tap" :> but the
10AWG wire (stranded?) is a win. When you're pulling a nice heavy
load you don't want to be wasting power in a silly wire!

Bottom line is to use the least amount of power you can. Folks who
do a lot of *boating* have learned to carefully note the power
consumption on their radios, etc. Power isn't free.

Ryan,

Physical separation was widely used on amateur repeaters before commercially manufactured duplexers were truly affordable. We had a 2 meter repeater mounted
on a tower with two antennas vertically separated about 25 feet (vertical being
preferable to horizontal separation) with the transmit antenna mounted below the
receive. This worked reasonably well, but not as well as transmitting and receiving
on the same antenna. It's a good alternative for a low-cost repeater setup.

That is probably very close to the truth, at least the Klan were able to voice their opinions non-violently. Isn't it kind of funny that as much as the KKK hates blacks, they were voicing their opinions without violence, much like Dr. King did back in 60's, it was the Panthers that brought the guns. I also noticed that the Panthers waited until the Klan members got in their cars and were about to leave before they started chasing them down the street. Anyway, what does all of this have to with Amateur radio? hmmmmmm...

Hello there...

I have for sale a Radio Shack PRO-39 portable scanner. Has 200 memory channels (well, it's actually 210 if you count the 10 monitor channels also,) Hyperscan mode (blazing 25 channels per second scanning and 50 steps per second searching rate.) The scanner covers the following frequency bands: 30-50, 50-54, 108-136.975, 137-144, 144-148, 148-174, 380-450, 470-512, and GAPLESS 806-960 MHz (with proper 30 kHz spacing in proper portions of the 800 MHz band, and normal 12.5 kHz spacing elsewhere.) (Mod was professionally done.) The scanner is in MINT condition (I hate to use the word "mint," but in this case, it truely DOES apply!!!) There are NO SCRATCHES anywhere on the scanner. Scanner comes with the following accessories: "Rubber Duck" type antenna, six Radio Shack Rechargeable AA NiCADs (1.25V, 650 mAh) catalog # 23-125, Radio Shack Home AC adapter/charger (9V DC 300mA output) catalog # 20-188, Radio Shack Mobile DC adapter/charger (Catalog # 270-1562.) Plus I have the original box, packaging, and manual. Date code 8A3. Made in Japan. $200 for everything. Willing to ship COD (cash only, no checks!) or postal money order. Thanks for reading.

Don't be a ding-dong, Jeff. Perhaps you've never encountered *volunteer*
emergency services, but such things exist, even in California.

> It's no wonder folks in the profession ask why full-time regular-salary

I won't disagree that "wannabes" are obnoxious, but you can't overlook
the fact that not all counties are as well-off as the one you live in.
There's a good chance that this "first-responder" is trying to help.

Maybe you could ask about that before feeling compelled to post a flame?

6099. Hams Deal With Natural Disaster !

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-28 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6n47lmkvt1@nnrp1.dejanews.com>
Source record: 168655

Lucky for hams in several states it's Field Day and they are prepared
to deal with mass casualties. Reports are flying across the newswires
that at several campsites, there have been after dinner explosions.
These have occurred largely where mass quantities of baked beans and
hot dogs have been consumed and as hams were leaving the campfire to
return to the operators' post.

If you have a group of say 6 cables and 2 have recently failed you might consider changing them all while you have your overalls on, the tools and ladder are handy, its not raining and the replacement cable is already on site. Its just a matter of economics and probabilities.

If there are a thousand fluorescent high ceiling lights to maintain in a large factory it may be more economical not to replace the odd one or two which fail as it may cost $50 to change one and $60 to change 10. The best approach may be to change none on an individual basis but change all of them, good or bad, every 6 months.

With only one cable - if it works, don't fix it !

That is unless it's part of a life support system.

I am looking to trade or sell my Tektronix Phaser 220i Color printer 14mb's onboard (Max), PC/Macintosh compatible (win 3.1-98+, Mac OS 7.0-8.0+). 200 Sheets A4 matt finish paper (for best graphic results). 100 sheets of overhead transparencies. Additional integrated paper storage(I use for overheads). 2 Additional Color Rolls
Less than 100 sheets printed (can be verified by a status check on printer.)
Each Color roll does 345 Prints

Will take $1,000.00 Postal Money Order OR I will trade this unit for a GR300 / GR500 Series Repeater in UHF. The unit needs to be 25 watts or greater, with 2 channels. These units must be in good working order I will verify with my Radio Tech to the condition of unit. Original Boxes not important, but would be useful to have manuals and all misc items that came with them.

I will also consider trades for Short-wave units, please send unit specs.

All Reasonable Offers will be considered

And even more lives might be saved if he were driving a vehicle designed for such service. There are some pretty stringent standards that a manufacturer must meet for their product to be placed into emergency service. Taking a Ford Taurus and placing lights, siren, and radios in it strikes me as an odd approach to assembling an ambulance vehicle.

Has he passed his state's emergency vehicle driving school (usually sponsored by the state highway patrol)? Will he be running stop signs and red traffic signals at intersections? Is he setting his city/county i.e., taxpayers) up for a massive lawsuit if he has a TC enroute to a call?

Our paid-call firemen were sternly instructed to report to the station in a code-two fashion (obeying all traffic laws); anyone using their vehicle in an improper manner was immediately dropped from the department.

Jeff KH2PZ (former SoCal fireman)

6104. The Age of Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-28 00:00:00 UTC
From: 811a@englandmail.com
Message-ID: <3595b1a8.1678611@news.cei.net>
Source record: 168660

Here is a chronology of Amateur Radio as we have known it ---

THE 50s ----

The Golden Age of Amateur Radio. Life was good. Amateurs contributed to the growth of technology. Rigs cost lots of $$$ but we saved-up to buy them nonetheless. Amateurs, although mostly nerdy, were generally respected.

THE 60s ---

Still a good time for Amateur Radio, but the gold plating was starting to show some signs of wear.

THE 70s ---

The Japanese invasion. All those "great" rigs of the 50s and 60s turned out to be not-so-great when compared to the Yaesu and Kenwood products. Bye bye Drake. Bye bye Heath. Bye bye Galaxy. Bye bye...

Transistor and IC projects start showing up in QST. Only those with small hands could work with the darn things. Somehow the old tube circuts lost something in the translation to solid-state.

THE 80s ---

Amateur Radio starting to show signs of major identity crisis.

Surface mount technology shows up. Suddenly nobody has hands [or tools] small enough to work on this stuff. Soldering irons start showing up for sale at the hamventions. No more project boxes or breadboard circuits.

Computers...ARRGGG!!

Amateur Radio pronounced dead July 6, 1989, but everyone is in denial.

THE 90s ---

More computers...more downsizing...more and more of less and less! Lots of sizzle but no steak.

The corpus of Amateur Radio [dead now for a few years] is starting to stink, as are most of the operators who frequent 75 meters.

The Internet, heralded as the latest and greatest in Clinton / Gore propoganda is revealed to be just another advertising medium. In fact, the greatest since the invention of that other great waste of

time known as television.

Duwayne Hick [of the Arkansas Hicks]

trade you're teaching them.

6106. Patrick Goes to Heaven

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-28 00:00:00 UTC
From: k1oik@mindless.com
Message-ID: <6n4dlatpc1@nnrp1.dejanews.com>
Source record: 168662

There once was a little troll named Patrick who one day walked out onto the I-95 and was hit by a tanker truck full of goat milk. When Patrick got to the gates of heaven, St Peter asked what he had done for others in his life. Patrick said, I went to Church, I tried to help my fellow hams, and one time I donated one dollar to a homeless family. St Peter said, "wow, is that all ?" Patrick said yes. So Peter sent an angel to earth who soon returned with word that it was true. Said the angel, "what should we do ?" Peter said "Give him his dollar back and tell him to go to hell".

Read between the lines poopy head.

Patrick, a flamboyant ham (not someone you'd share a room with at a Quality Inn in Dayton), was known for his brightly colored outfits. One day, his fellow workers were sitting about trying to figure out where he got these loud clothes. Said one coworker, I was in the store one day and overheard the manager say, "Uh oh, here he comes again. Go pull out the trunk.

Such a sham that the newest crop of potential teachers are now being graded "on the curve" by their respective institutions of higher learning before they graduate from college. No wonder that we have a whole generation of kids who cannot read their graduation certificates....they are the result of the system. Dummies teaching dummies.......teachers who cannot spell, teachers who have not an inkling of the rules of grammar.....teachers who worry more about their party life than the lives of the kids they are supposed to be teaching. This is the classic example of the "dumbing down" of America.
Before these teachers make "fun" of Ham operators, I would suggest that they take a bit of time to can their holier than thou attitude and look at their own shortcomings. Now days college degrees are a dime per dozen...good sense is another story and a rare commodity indeed!

I am talking about participation about the field day. Who the hell
cares about the number of contacts you made ?? If you have no
propagation and have thunderstorms with millions of hams on the field
day, how many contacts you think you can make ?? I am talking
about the PARTICIPATION (i.e. number of hams who were active in the
field day). Just keep saying no code = no ham and it is a great way
to kick the hams and other public people out and make a great field
day !!!!! Good luck next year !!!!! Less and less participation
!!!!!!! WOW!!!!!!!!! Amateur Radio is great !!!!!!!!!! WWOWOWOWOW!

Yep, I just finished building the Ten Tec 20>6m xvtr on Saturday. Hooked it up to the 20 m loop, worked VE1, then put it into the TV antenna with a 1/2 wave coaxial balun (circa 1950's handbook and memory) worked over 25 stations with 8 watts. Thats why they call it the magic band.

The club station of the Bangor & District Amateur Radio Society (GN3XRQ/p) will be active from Groomsport Harbour as part of the town's Eagle Wing Festival on Saturday 4th July 1998.

This is in memory of one of the first emigrant ships to leave these shores back in 1836. Any calls, especially from USA, will be welcome. We will be mainly on 10-15-20m with a talkin station on 2m.

As I am building a repeater, I would like to know where I can get some repeater courtesy tones.

My sound card doesn't record properly (highly distorted playback), so might someone be able to record [some] cool repeater tone[s] and send them to me? I would prefer not to get CW tones, but non-CW tones (beeps, computerized sounds, etc, anything non-CW).

Thanks very much!! This post may seem weird, but hey, it's a repeater, and a courtesy tone is an important feature taken for granted.

As usual the Ballymena and Queen's Universtity Belfast radio clubs (GI3FFF & GI3LLQ) will be running a special event station from Rathlin Island to celebrate the anniversary ofthe Marconi Station being set up on the island. This year will be the 100th anniverary and possibly the last time that the call GB2MRI (Marconi Rathlin Island) will be used.

As the anniversary is on the 6th July it was decided to combine the special event station with VHF Field Day (4,5 July). This means that you will have the opportunity to work the RSGB president (who will be there for the week 2-9th) on 4m,2m,70cms or 23cms during the contest!!

As well as the above the Island counts as EU-122 for IOTA and covers three Worked All Britain (WAB) squares.

Something for everyone I'm sure you'll agree!!

Hope to work lots of you during the week - especially during the contest!!!

Thank you very much! I won't have as much hardware as you'll have, but I am using a computer program to control all the sounds, ID, and timers and things.

I may have to build an external box (connected to COM port) controlled by a VB (or Delphi or Visual C++) program to open/close the TX circuit. Do you have any good ideas on how to do this?

Sending a 1 or a 0 to the box is simple, and that's all I need. I just need the box to interpret the 1 as "transmit" (and close the circuit), and a 0 to stop transmitting (and open the circuit). This seems so simple, but let me know. You seem to know about electronics. At 15, I haven't been exposed to much actual hardware/electronic devices -- I'm more of a software guy.

Thanks again!!

Try homebrewing. Pack all the high-tech storebought stuff away for a few weeks. build a 2 transistor rock-bound transmitter, a superhet receiver for a busy band or a DC for a quiet one, build a hacksw blade key, an open wire fed dipole, a balun for the transmitter output, and to cap it off, get some young aspiring ham to "help" you. I think maybe just getting back to basics might be the thing. Also, roughing it for a while makes us kind of appreciate our kilobuck wonderboxes a little bit more. My .02.

I got a program I wrote a while back that runs under Windoze at my web site.
Ignore the shareware registration begs... it is now public domain. It does not
support contest or award tracking, but it stuffs all the data into a QSL format
suitable for printing, faxing, etc. I wrote it to interface with the SAM's
callsign database, floppy version but you can change to another callbook from
the menu. Enjoy.

If it is a ship or coast station, I have some hard copy references and I can
give it a shot, Hugh. Gimme the call and I will see if I can find it.

> preferably more frequently than once a month?

You might check at a local airport flight school. It may sound like a unusual place to go, but many flight schools give FAA test for pilots through the same electronic testing services used by the FCC.

Several years ago, I recall seeing the GROL test on the list of those given a Port City Aviation in Stockton and asking the girl at the counter about it. I was amused when she said she had no idea what that test was for but she had given a few of them.

Just call a local pilot shop and ask if they do electronic testing for FAA exams. If they do, ask if the FCC GROL is offered.

Just about any frequency in the 27MHz band should be able to yield
a plethora of courtesy tones users on your repeater will be able to
relate to.

Of course, the charging current will also be limited to something considerably less than the current rating of the headlamp, because at rated current it drops 12 V. But in other respects it's a clever and cheap solution. Dig that crazy high-intensity charge indicator!

Hey guys
I here that there is a movie of The bowling pin floating around Atlanta. The guy that filmed this they call wrong way. I think its a porno flick or a nude flick of pig vomit's wife. At the time of the filming pig vomit's wife was living with this wrong way guy. I want to know if any one else in the Atlanta area knows about this movie. From what I understand its pretty bad.

6155. Lightning and Ionization Discharge PROTECTION

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-29 00:00:00 UTC
From: davisrfinc@aol.com
Message-ID: <1998062904115700.AAA22331@ladder01.news.aol.com>
Source record: 168478

LIGHTNING AND IONIZATION DISCHARGE PROTECTION: Don't risk your equipment, your home, family, neighbors, or potential death. Lightning and ionization discharge damage often occurs by a buildup of ioniztion around various structures that can be at various levels of elevation, low to high. Ionization is the formation of a group of atoms that has acquired a net electric charge (by gaining or losing one or more electrons). This charge, for instance evolving around an antenna, steel building peak, boat mast head or flying bridge, or even a wooden house roof, provides one point of a path that often can evolve as a bolt lightning. Or, this built up charge can cause damage to electronic equipment connected to it. Our firm offers a low cost (below $40.00), low-profile, small and easily installed with one bolt, Ionzation Discharger. Protect yourself NOW and avoid costly damage, injury or even death. Contact DAVIS RF Co., 1-800-328-4773 or visit our site at www.davisRF.com

6156. The identity of the Burt posters

no no...actually, it's for his remote control Honda Accord. I've got
one too. I'd like to get rid of it because Tower Hobbies doesn't have
too many parts for it.:)

cheers

Try http://www.fcc.gov or something like that. Or try something I am more sure about... http://www.arrl.org. I know there is some place where you can get one on-line. Also, all the study guides have 610s in them. Your local VEs probably have some too.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <665>

.....
Member Profile:

From: GMyhra@aol.com

It has been great getting the current news from your bulletins. I am the Disaster Chairman and Post Surgeon for the VFW Post 10267 in Jupera, Ca. and your current information has been very heplful in our Post planning for major disasters in our area. We currently have a specified area where first aid and other items are being stored to help local members of our communtiy in the event of a major event such as a earthquake. I am glad you provide this internet service and major update. Information obtained from your news bulletins is brought on the floor at all Post meeting and matters are voiced at that time. Keep up the good work. GW Myhra
.....
What's New on the Web:

From: "Reed, Rick T" <rick.t.reed@intel.com>

http://www.emsa.cahwnet.gov/heics3.htm

This is the Web site of the HEICS III Project - an effort to update and create a third edition of the Hospital Emergency Incident Command System (HEICS).
In 1992, a generic disaster response plan was released to hospitals based upon the Incident Command System. This initial HEICS was first tested by six hospitals in Orange County, California. A second edition was developed by a state-wide task force, tested again by Orange and Los Angeles county hospitals, and made available in May

1992 throughout the United States, Canada, and across the globe. HEICS features a flexible management organizational chart that allows for a customized hospital response to the crisis at hand. Following the 1993 Northridge Earthquake, HEICS was used successfully by some of the hospitals damaged in the quake. The plan has also been used in single-hospital emergencies and in many disaster exercises. >From these experiences additional insight has been gained, and, with support from the California Emergency Medical Services Authority, the San Mateo County Emergency Medical Services is again updating the plan.
The Web site provides the second edition of the HEICS plan, and interested persons are encouraged to take a critical look at the document and return their comments to San Mateo County Emergency Medical Services team working on this update. In addition, this URL offers the executive summary of the third edition, a list of FAQs (frequently asked questions) about HEICS, the system's organizational chart, and other information about the project.
.....

This week's EMCOMM Bulletin:

EMC138 On Reaching 50! For release 6/29/98

Not years, but events!! Yes, _since_ 1980 one unit has responded to over 50 emergency callouts, 80 drills and 30 standby operations.

We refer to the HDSCS (Hospital Disaster Support Communi-cations System, a specialty section of the Amateur Radio Emergency Service (ARES) of Orange County, CA. Founded in l980. They responded to 10 callouts between 1980 and 1990, and 40 from 1990 -1997.

HDSCS is a group of about 90 Amateur Radio operators who have volunteered to provide backup internal and external communications for critical medical facilities. Some 30 Organizations are supported by HDSCS according to April Moell, the originator and leader of HDSCS.

In January 1996, a Memorandum of Understanding (MOU) was signed between HDSCS and Orange County RACES to facilitate communications, cooperation and mutual aid during countywide emergencies. This MOU has proven its worth during numerous drills and the recent Lemon Heights firestorm. HDSCS members providing ARES backup communications for hospitals (all of which are private institutions) can work closely with Orange County RACES members performing backup communications for county government agencies. Those present at the ceremony included: Ted Kramer NB6N and Bruce Gallant WB6DCC (HDSCS Assistant Coordinators), April Moell (HDSCS Coordinator), Walter Wilson N6VYB (Emergency Communications Coordinator for the County of Orange), Ken Bourne W6HK and Joe Selikov KB6EID

(Chief Radio Officer and Assistant Chief RO for Orange County RACES). Since that date, Walter Wilson has retired and Ken Bourne has become California OES Deputy Chief ACS Officer - South.

With experience both as an Amateur Radio operator and a hospital employee, April Moell found it natural to combine the two in HDSCS. She obtained her FCC Amateur Radio Service license 1976 and now holds an Advanced Class FCC license.

As a Registered Occupational Therapist, April served for 17 years as Director of Occupational and Recreational Therapies at St. Jude Medical Center in Fullerton, CA. While there, she originated HDSCS. She also founded the Rehab Radio program, which used Amateur Radio communications as a therapy tool with patients recovering from stroke, head injury, and spinal cord injury. In addition, she initiated the North Pole Network, which brings joy to hospital patients of all ages at Christmas time.

April is presently a consultant working with medical facilities, pharmaceutical companies, and government agencies regarding all forms of backup communications resources. When not consulting, supporting hospitals, or writing about it, she plays her oboe in the Fullerton Symphony Orchestra and teaches Amateur radio classes with husband Joe, who holds FCC license K0OV.

In attributing the reasons for the increase in activity between l990-1997, April said, "Clearly the main reason is that we have c become recognized as a reliable emergency communications resource by Orange County Hospitals." And, "We have made a difference. We got that urgent request through for blood. The call was made to notify the doctor his patient was in the emergency room. The radio operator was able to relay the nurse's message to the pharmacy about a needed medication for the baby in the intensive care nursery. It is indeed exciting to have reached fifty."

Congratulations to April and to all HDSCS participants.

This material is from the a l997 newsletter titled "UPDATE" by April, and HDSCS Web page: http://members.aol.com/emcom4hosp/

>Paul wrote:

>>I've finally accumulated enough money to buy a HT, and I was thinking
>>of the Yaesu FT-50 RD.

I was in the same boat last year, and looked all over for info. The Yaesu really seemed popular, and there are several archives of user info concerning them. The FT-50 is my first, so I haven't got much to compare it with, but I have been happy with it. I've dropped it several times without incident, and don't fear carrying it in the rain or snow, sand, etc. The wide FM does absolutely suck, no doubt. I haven't tried paging (no one to page me).

>>One of my concerns would be the battery pack
>>life. What kind of lifespan should I expect from the Yaesu powerpack?
>>Is it NiCad, or something else?

I carry mine daily (I replaced my Motorola radio "pager" with it, for use with the local rescue squad). In "power saving" mode (I set it to only check for channel activity every 1s) it goes for a good 30 hours with the standard 9.6v 600mah NiCD FNB-41. (I don't talk much) NiMH batteries are available, in various sizes from several companies. (I haven't gotten that far yet), as are various antennae models, several of which seem to be coming out with the SMA connector used "native" by the '50.

>> Would it be possible to power it by
>>more conventional means, such as an accessory to utilize standard AA
>>batteries instead of the NiCads?

>Anyway, Paul, that's what I think of my Yaesu FT50-RD. If you

>now getting fixed, seems like they put a wrong part in the thing
>somewhere, and the radio drains a fully charged batter in about
>12 hours - when it's turned OFF.
>
>73, Jim KH2D

Jim, I enjoyed your review. Well written, if not completely in line with my experience. I think the 50 fits in my hand quite well, but then I've got pretty big hands (It must be a real pain for it's native japanese users). I don't think I've had mine off for 12 hours (and not on the wall charger) since I got it 3-4 months ago, so I'm not sure if the battery would drain. I believe I have had it shut off once or twice, if I have it toward the rear of my belt when I get into

the car, but I use the keypad lock feature to keep the other buttons from messing things up. (it will occasionally stop scanning it I accidently hit the PTT, and stop on an inconvienient channel, although it won't transmit). Part of my satisfaction with it is no doubt due to comparing it with the Motorola equipment used by our Fire/Rescue/Police, which is universally several multiples larger, heavier, more expensive, and lacking in nearly all features. (I must be honest, most of it must be several times older, too) My FT-50 is the same height and width (although a bit deeper and heavier), not including the antennae, and about $50 cheaper, than the Motorola recieve only "pagers" we carry.
I plan on shopping for a charger, another battery or two, a better antenna (which I've heard to be a shortcoming that one needn't live with), and maybe a remote speaker / mic. I am interested in hearing some of the other suggestions, however. I considered the Kenwood and Icom models that are comparable (I don't remember the models off hand), but I liked the Yaesu's Dual Watch feature, size, ruggedness, and market share (and availability of third party accessories).

FWIW

Interesting. So if you can't program computers with punch cards, you shouldn't be a computer programmer? Code, while still much in use, is slow and limited compared to digital transmissions. I think that because some people still find the crew of the star ship Enterprise decoding Morse signals, that it'll be around forever. Welcome to the new Millennium.

Along with all the high tech solutions:

Just wire the second battery trough a car headlamp. The lamp
resistance will allow charging of the second battery with minimal
voltage drop (PTC characteristics of the lamp), but when starting the
engine, the second battery will only attribute the current the lamp
will allow to flow or less (< 5 Amps).
This works a lot better than diodes as a forward diode voltage drop
will not allow the second battery to be fully charged.

It's amazing how many idiotic messages were posted to Usenet during
Field Day.

You proved to all of us who DID do Field Day that it was better that
you didn't. THANK YOU FOR HAVING DONE SOMETHING ELSE!

May you have been healed by next year.

Can we meet in Boston? I am not famliar with your town in Maine. You do not think someone who speaks freely should have a ham license? You think using profanity and personal insults makes other think more of you? If it "were for you to decide" maybe blacks would not be free?

for most of the people, posting the stupid messages on the newsgroups are more interested than calling CQs and CQs.

I heard that as much as 50% of drop in number of hams operated on field day this year compared to that of last year. Good luck next year !!!!! Of course... we have to keep saying know code = know ham to reduce more hams !!!!!

6182. What Field Day is - recollections

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-29 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6n8851$7ti$1@w3eax.umd.edu>
Source record: 168505

This used to be such a NICE PLACE.

Such idiocy exists in this newsgroup. How about thinking
back...what is Field Day? Masa claims that someone told
him that participation was down 50% this year...I wonder
who he could have heard that from? He certainly wasn't
on the air, and had he pulled his head out of his ...
for a minute and turned on his radio, I think he would've
heard that the bands - THROUGH AND INCLUDING SIX METERS -
were alive and crowded end-to-end with signals.

We're talking "no room to call CQ on 20 and 40 meters" crowded.

But anyway, WHAT IS FIELD DAY? Masa sure as heck doesn't have
a clue..."CALLING CQ CALLING CQ"...

Masa, that's a CONTEST, which Field Day is specifically NOT,
but is instead an operating exercise. Some people take it
very seriously, but there are no prizes unlike in true
contests. Try it someday instead of merely bitching and
maybe you'll understand.

...Groups going out into the field and operating and perfecting
their skills under less-than-ideal conditions...

In our case, it was operating an entire weekend with nothing
but kluged antennas, gel cell batteries, and QRP equipment
from atop a ridge with no facilities except what we brought
with us.

Shelter was a handful of tents. The view was awesome,
especially at night with the lightning flashing all around
us (the antennas were disconnected).

Sunday brought a later, 4-hour FD operation with another
group; this was a family gathering, with casual operating,
all battery powered again, but with a picnic environment.

It gave a few people the chance to hone their skills (again,
after a few years) as well as giving people a good excuse
for coming out and having a good time with friends.

If you can't see that, your life is far sorrier than any
of us could possibly guess.

Best of luck ridding yourself of the afflictions that
not only prohibit yourself from enjoying life, but also
require that nobody else, in your opinion, should enjoy

anything either.

to those who wish to carry on their stupid banter about
things that usually get discussed on 75 meters, please take
it back to 75 meters where it doesn't belong either.

(Happy Field Day 1998 to all!)

For the first time in a few years' worth of Field Days,
there were actually a few GOOD openings on six meters during Field Day!

Saturday, it was open from FM09 (western MD) to all over the northeast
(as in Nova Scotia and New Brunswick, Canada) and on Sunday
from about 1400-1600z, from FM19, there was a huge opening into
the heartland of the US and Canada - Manitoba, Iowa, Minnesota,
Mizzou, Illinois, Wisconsin, the Dakotas, Nebraska...

Equipment used? About 50 watts to a copper tape dipole up about 10 feet.

10 meters was similarly hopping. It was GREAT to see!

Hey Cutie Boy:

The number of FD QSO's made by my club is up by at least 300% this
year, in spite of the fact that we got a 2 hr. late start in getting on the
air due to severe weather in our area on Friday, which did much
property damage and had us in SKYWARN mode instead of setting
up the Field Day site! If there is a 50% drop in FD activity, it certainly
wasn't noticeable here in Delaware! The HF bands were jumping
like crazy! I never got a chance to work much 15 meter CW, since
10 meters (not usually a hotbed of CW activity) was really hopping!

6186. How to Bring the Fire Back?

Newsgroup: rec.radio.amateur.misc
Date: 1998-06-29 00:00:00 UTC
From: fernando_tonolete@usairways.com
Message-ID: <6n8j1k$ii7$1@nnrp1.dejanews.com>
Source record: 168509

I am an Extra Class ham, N6NSM/4, and once upon a time, I used to be really fired up about ham radio. CW was my favorite mode, and I used to drive down the New Jersey turnpike with a Bencher paddle on the side and a German tank J38 key strapped to my thigh. I gradually went into RTTY, AMTOR, PACTOR and pretty soon things became so automated and so easy that my interest in the hobby slowly dissipated. After a year's stint as president of the local radio club, I went on a 6-month sabbatical from work to do volunteer legal aid work in southwest Colorado, and I was out of touch with radio (sounds ironic) for that length of time.

Now I'm back and its been close to 2 years since I last used the shack. It's a pity because I have one of the better-equipped shacks in my area: YAESU FT1000D, Henry 2KD Classic amp, 233mhz MPX PC, Kantronics & PK 232 terminals etc. I just can't get myself motivated to go visit the shack downstairs. In the interim, I have picked up other hobbies like pool (just got a Brusnwick table), guitar playing, a bit of golf, and now my latest love: recumbent bike touring.

I guess my problem is that I just have too many toys and unfortunately, ham radio has been relegated to the background. It has been a wonderful hobby in the past and I wish I could relive the excitement of the past. I'm thinking of going back to Morse code - my most enjoyable moments used to be helping new hams laboriously send and receive code at 5wpm on the Novice bands. Darn, I can't even remember now where the novice CW bands are on the dial nowadays!

I'm wondering if other hams out there have had the same experience and what they did to bring back the excitement. Right now, the fire is gone.

Butch, N6NSM/4

Burt, by his own admission, has made a lot of enemies on Cape Cod. No doubt his outspokeness has alienated more than a few people.

What makes you so sure it's him, or a disgruntled student?

After ten minutes of Field Day (or any other contest for that matter),
I'm bored to tears. The USENET posts were far more interesting than anything
Field Day could offer, at least for me.

>May you have been healed by next year.

That's about how long it takes me to recover from Field Day.

Amsat doesn't float to the top, It gets crushed under the swift heel of
Arianespace. Arianespace has already decided to launch a dummy payload.

Actually, it proves what we've known all along...ham radio is dying, nobody cares, and most "hams" would rather be at home on the Internet instead of playing make-believe emergency games with a radio in the woods.

So, Blurt, why are more and more states adopting less restrictive laws on ownership and carry? Seems pretty strange to me.The fact that you posted this absolutely destroys whatever credibility it might have otherwise had.

I am not interested in an opinion poll with 1100 households represented. Guess what? I would not be particularly interested in the results of a poll with 100,000,000 households represented either. Thankfully, neither yours nor anybody elses misinformed opinion has any bearing on my right to bear arms, and so it concerns me not in the least.

Stuff THAT in your pipe and smoke it. If you don't have a PIPE to stuff it into, well.......

I see another post on the subject. I will read that one and that will be the last post I read on this thread. If you post anything else on this thread and want a response, you wll have to e-mail me. Of course I might still not answer.

Hi all,
Made my first 20m QRP QSO yesterday. What time does the 20m band
open these days (my station is in north Texas) ? And for how long ? Are
there any QRP operating procedures available on the web ?
Please post replies to this newsgroup.

Thanks,
Jay Samuel

I am interested in digital radio programmes - particularly BBC R3 and R4.

Please can you point me towards info - news groups or web pages.

I have been enquiring in UK shops about purchasing a digital radio, but no-one is able at present to help. There must be someone out there who is willing and able to provide information !!

Any help would be appreciated.

Regards

Andrew Hext

Very nice opening on Sunday for 6M SSB!! I was mobile on I-35 in
Missouri and Iowa using an IC-706 and a 1/4 wave whip and worked 26
contacts scattered thru VA, NY, PA, MD, NJ and Ontario as well as a few
in CO and WY. My first time operating during Field Day and it was very
enjoyable. Maybe next year I won't be on a family trip and can do some
more serious contesting.

I signed up for membership in the ARRL after recently receiving a new ham license. They in turn took my money, and set me up as an associate member. I could have joined that way three years ago. I wanted to start out right and maybe learn something from ARRL. I did, they will take your money, quickly. However, the feeling that I am a valued member is sorely lacking.

Anyone know of other organizations that would value me, and my membership.

Alan

Are there any libraries around here that carry a good set of back issues of QST? I'm looking for a specific article on p. 30 of either the May 1981 or May 1982 (depending on which ARRL index you look) about Computer control of the Icom IC-255A radio. (Alternatively if anybody has a copy they could fax/scan... let me know. :-))

> Yawn.....

Well Mr. Baker, Field Day for many is getting together with a bunch of your friends, grilling up some hot dogs & hamburgers, washing a few beers down, running some radio equipment in a contest and just generally enjoying some comeradery with those who share an interest in radio. If you find that boring, I doubt there is much that ham radio can offer you, you see it is what you make it. Perhaps a weekend at a Microsoft Windows 98 conference would suit you better.

Open? First QSOs are to the Pacific at sunrise, and it's basically
open all day, sometimes as late as sunset.

At times, 20m NEVER closes. Give it a year or so, and you'll see.

Well, there's Rob's two cents now here's mine: what have you been doing with
your radio stuff? is it a maeningful challenge or are you just going through
the motions?

A few things you can do about it are:
Join a new or different club, maybe they've got an unusual project you could
work on.

Think of something fun to work on and start your own club!

As a last ditch effort, put away your mike and go play golf, get a tan, maybe
even try a new hobby for a while. It's not much of a hobby if you're not
having any fun. Whatever you do, be social and make lot's of friends.

Cutie Boy's argument fails again. If participation is down, you would
expect the number of contacts to decrease. If participation is up, you
would expect the number of contacts to increase (all else being equal).

> If you have no propagation and have thunderstorms with millions of hams
> on the field day, how many contacts you think you can make ?? I am
> talking about the PARTICIPATION (i.e. number of hams who were active in
> the field day).

I visited several Field Day sites this year. Huntington Beach RACES had
more than *two hundred* operators and other participants at their site,
and used the event to interact with the CERT program.

Between visits to the other sites, I did a little operating from home
(class 1D). My leisurely calls netted me a total of more than 105 contacts
on 160m, 75m, 40m, 20m, 10m and 2m. Not bad considering the antenna
(probably the worlds' shortest "longwire", strung between two trees in a
very small lot!) and only 100W. This figure does not include the contacts
I made as a visiting operator at the various other sites.

> Where the hell did you get this information? Cutie Boy Headquarters?

Cutie Boy, I HEARD, 99.999% of all students at your university avoid you like the plague. I also heard you have 80% fewer friends than other sudents, I heard your popularity in Montreal was down by 90%, and the chance of you ever passing an aviation exam is only 10%. If 40% of 100% of the people on campus who like you became radio amatures there would still be a 0% increase in activity on campus. This is why watermelons cost $40 in Japan.

While talking to students on campus, one student said "know Cutie Boy = know a blithering idiot" another said "know Cutie Boy = Understand parental failure" yet another commented "know Cutie Boy = We need better immigration laws"

Others who had a different viewpoint said "No Cutie Boy = fewer dweebs on campus" a group who supported No Cutie Boy was chanting "No Cutie Boy = more campus interest in ham radio"

A meeting was held on campus to help resolve the differences between the "No Cutie Boy" and "Know Cutie Boy" camps, after many heated discussions both groups were stunned to find there were no differences in their opinions.

huh ?

> "know Cutie Boy = Understand parental
>failure"

by the way, do you have kids ? I don't do what I don't want my
kids to do. i.e. drink alcohol, smoke butts etc. I want my kids
to try a lot of things so I myself try a lot of things. I doubt I
will have kids (i.e. wife) because I am a dumb idiot who is
responsible for my own action in front of the children.

> yet another commented "know Cutie Boy = We need better immigration
>laws"

yep. try to eliminate straight A students. try to eliminate who
are hams. try to eliminate who are pilots. try to eliminate who
play lots of musical instruments. try to eliminate everyone.

>"No Cutie Boy = more
>campus interest in ham radio"

really ? I know that before I came here, the amateur radio club (at
this university) was present but it deceased due to lack of interest

for a couple of times.

>A meeting was held on campus to help resolve the differences between the "No
>Cutie Boy" and "Know Cutie Boy" camps, after many heated discussions both
>groups were stunned to find there were no differences in their opinions.

>Tim, ka8ddz

huh ?

yep. know code = know ham. simple as that !! keep saying that
!!!!!

> If
>you find that boring, I doubt there is much that ham radio can offer
>you, you see it is what you make it.

yep. majority of people find it bored. that's why number of hams /
activities is decreasing. in fact there were many messages posted on
field day. that's it. it shows lack of interests toward field day
or ham radio in general. it is more fun to post the stupid
articles on newsgroups than sitting down on shack and punching the CW
keyer. get a life.

>Perhaps a weekend at a Microsoft

There is an increase of hams in Japan:

- No CW, HF privilege
- Since no CW and you can use most of the bands, some find
that the use of HF is boring so they move to UHF (i.e. 1.2 GHz and
2.4 GHz are very active in Japan)
- good way to keep everything active.

Here:

- No code = No ham
- Jam if you don't like it

>3) The Internet is being accessed by many people who need no
> license and the fear of sending and receiving "secrets"
>or
> opinions will IMHO diminish. Countries can limit what hams
> say but can only censor the Internet by limiting provider
> forwarding. International ham communication may be
> encouraged even where Internet communication is limited.

huh ? hams can send out secret codes ?? read the law again.

internet ? ohohoh.... i can contact all over the world 24 hours a
day, 365 days a week, cheap, effective and I don't have to call CQs
and CQs since I know who are online. never mind about the
propagation. waste of time.

> There is another part of HAM POLICY that must be given serious
>thought.

> Maxim and the founding fathers of ham radio
>organized early hams to RELAY messages.

> We now have hams who operate
>portable equipment

no code = no ham ? bring your CW keyer and show to many people when
you have disasters. punch CW keyer so u can send out messages if
someone is in trouble. make sure you have the battery and the antenna
and the transmitter and more. While u are doing so, someone is
using cellular or voice portable radio.

> in disaster areas - floods, fires, earthquakes, etc.;

yep. don't even think of fallen antennas on the roof. just transmit
the signals with no antenna.

>Their messages are received by hams who may be just beyond the disaster
>areas but have full use of line power and telephone service.

>These hams
>can RELAY via e-mail to relatives of those in the disaster areas.

yep. but i thought the use of e-mail wouldn't be good for ham
operators ?

>Serious thought must now be given to organizing hams who have access to
>e-mail as well as ham stations that can receive emergency traffic.

emergency traffic from whom ?

> They
>must act as RELAY stations to relay emergency traffic.

to whom ? CW keyer and punch it and who hell cares ....

> AND - THAT IS WHY I SAY that HAM RADIO MUST FUNCTION AS THE
>SERVICE ROAD OF THE INFORMATION HIGHWAY. Do you understand me now?
> PLEASE keep thinking,
> I never met a ham I didn't like,
> Bob Wex w2ilp (Initiate Lasting Policies)

anyone can send out e-mails if hams can do it. what's so special
about using e-mails if you are ham ??

---

here, public service depts are teling us that they don't need us
[hams]. too bad. they have their own radio system (no code = no CW
keyers) and cellulars. they have internet access (if hams have it
also. logical sense here). they don't need someone who shows
up with CW keyer, battery and antenna and saying no code = no ham and
start to punch CW keyers for asking bed and food. Never mind about
the CW. We all have satellite access if everything on land fails.
Too bad.

> Please post replies to this newsgroup.
>
>

I usually hear 20 open to points east from about 0800 local. Doesn't really shut down to points west till around 2200 local.

The problem I find on 20 is it is hard to keep a good ragchew going especially with QRP. A distant station might hear the station you are working but not you... then wait a couple minutes after the other guy's "KN" and call him. Usually this seems to be a QSL hunting DX station who only wants a 30 second QSO anyway, but he will call and call untill the other station acknowledges. When he does, the floodgates open and it is assumed that the other guy WANTS to work a pileup, so he gets one. Or... you call CQ [your call] / QRP, and you get a pile-up yourself. There are a lot of rabid DXers who simply MUST have your card. Often they cannot hear you during bad QSB, but they call you anyway right in the middle of your transmission. That is the problem with 20... the CW portion is so crowded. with card-chasers. Otherwise, it is a good band for the QRPer. Try around 14002 or 14003, or if your license class does not allow use of that portion of the band, try just under the RTTY/PACTOR area... around 14060. I have heard a few QRP CQs in both areas and used them myself.

I personally like 30 and 17, especially 17 for QRP. Not as much action, but that is only a concern if you are looking for cards. 17 is FB with low power... not very noisy and very seldom will you start a pileup there. 40 is popular with the QRP set, and not too crowded down at the bottom, but QRN is an occsional problem when you are only runnng a watt or two.

When you hear stations, the band is open. Simple as that. 20 is so popular that somebody is always calling, so seldom will the band be quiet even when open, as often occurs on 10 or 12 meters. I called CQ on 12 once just for the hell of it after running up and down the band for a half hour and hearing nothing, and got two calls back immediately. Everybody was listening but nobody calling because nobody heard anybody else and assumed the band was not open yet because everybody else assumed the same thing because... get the picture? Sometimes you just gotta throw some CQs out there if you don't hear anything. On 20 thhat is not a problem.

You will get a lot more action if you have a nicely keyed stable signal. A chirpy or raspy signal will turn a lot of hams off especially if they can barely hear you in the first place. Ask how you sound... Often better regulation or filterig of your power supply, or looser coupling between oscillator and buffer/driver/final/etc will make you more pleasant copy. I always send very slowly at first if there is any noise to speak of. Make yourself as easy to copy as possible. If you simply can't send good code, use a computer. No shame in that, if you ask me.

Your operating technique hinges largely on just what you want to achieve with QRP. My philosophy and goals might be completely different than yours. You might be working on DXCC/QRP for all I know. If you are into that sort of thing, you will have to be a bit more aggresive. Try waiting, during a pileup, until everybody else has stumbled all over each other calling that rare station, then quickly send only your call and /QRP. Thaat often gets attention. When the other station sends QRZ/QRP? waste no time. get back in there with your call and particulars before the thundering herd mashes you into the noise floor. Also when a pileup is very well zero beated on the freqq, try calling about 300 Hz lower or higher. Often you will be heard when your beat note stands out well from the pack. You can try calling just above or just below the pack when the rare station is working split, too. Occasionally, you might want to use a really dirty trick... you can try MAKING you signal a bit obnoxious by introducing some 60 or 120 Hz modulation into your signal... exactly the opposite approach you would usually take. You have to stand out from the crowd and be heard. This is really not good practice, but at a watt or so you aren't bothering too many people too badly. If you have a moral problem with this, then disregard.

Another trick to try when all else fails is NOT signing /QRP, especially if you are running over a watt. Sometimes your peanut whistle will sound quite loud, but the /QRP will discourage the other guy from working you for some reason. You can wait until you swap station technical particulars before revealing the weakness of your signal <grin>. That makes the usual 599 many hams hand out a lot more fun to get.

Hope you enjoy 20 QRP. Do trry some other bands when you get a chance.

Source record: 168402

I have the opportunity to get a friend's HTX-202 cheap. My only prior experience in radio is with a scanner. My county (396 sq. mi.) has 2 repeaters, but I rarely hear any traffic on it with the scanner, just farms and such. Is this a good beginner's rig? Should I save my money for a HTX-242 or something with more power? How much range can I expect with this 5-watter, repeated and unrepeated? Is 2 meter advisable for a beginner? What are the various "niches" and ranges of the bands, like 2 meter, 6 meter, or 10 meter? I would like some good distance out of my rig, but I don't need to talk to China or anything. Is there a better band to start with? What about SSB CB Radio? I know this is alot of questions but I would appreciate if someone can give me some direction.

Thanks
Pete

We have things called beacons, Masa.

They're unmanned xmitters running under 100 watts, usually with
omnidirectional antennae, used for determining propagation.

They can be found below 50.100 MHz on 6m, and on lots of other bands, too.

What about a nuclear holocust?? I want to see some get on the internet to pass messages or mail then!! I dont like code either but it will be the only way to communicate effectively when and if that time comes.If i'm alive I will be happy to know thatI might at least have a chance to contact someone or recieve emergency information that could give me and my family the chance to servive. Granted the chances of nuclear disaster is slim it could still happen and we (ALL HAMS) should be prepared for such an event. I beleive that all HAMS should be required to atleast receive code at 5 wpm,its not that hard,even if it means fewer people getting envolved in amature radio.

Thats my thoughts, take it for whats it worth. I'm sure someone will disagree.

In addition, there is a web site that provides practice exams for each level of license. It's at http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html. It really came in handy when I was studying for my Technician exam because it had the latest version of the questions that my study material (borrowed from others) did not have.

I would start with a good, cheap 10 Meter radio if I was just starting out in ham radio, 10 Meters is usually open in the early afternoon this time of year, with contacts as far away as 3,000 or 4,00 miles possible.

Darn! We had no such luck in Southern California, we had the poorest
6 meter log of the 3 years I have participated in FD.

Glad to hear you guys had good conditions. There was an unforecasted
meteor 'outburst' starting 0900 UTC on 6/27/98/ First detected by
Japanese observers. Got this info this afternoon from a coworker who
cruises the JPL postings at sci.space.news (actually part of his job
as a physicist at a satellite company - some folks have it nice!).

May be active again tonight around dusk. The radiant is near RA
=224o, DEC=+50o (for the astronomically inclined, I just look upward

and sweep 360 until I see something).

Still hoping to work you 3 & 4 calls.......
Howard KE6MAK

> also a possiblity. So my question, what would be a good ant for QRP
> from
> the types above and any related designs?

The inverted vee would be the best bet on 20, and probably also on 40, depending on the height. The ELNEC demo program is able to analyze antennas like these, and it's free from http://www.teleport.com/~w7el. It'll give you a good idea of the characteristics of most antennas you could use. But it can't show the sometimes significant effects of all the conductors in an urban environment, so some experimentation is called for, too.

> 2. I would like to put as low loss a transmission wire as possible
> (cost

> LMR400
> for .59 per foot. Is the LMR400 worth it over RG213 as far as QRP work
> is concerned ? Also I am estimating a cable length of about 50feet. Is
> this too long for 3W CW ? Should I restructure my shack to shorten the
> cable length ?

The power you're running makes no difference, except that you'll need every dB you can get to stay above the received station's noise level. The _ARRL Antenna Book_ shows the attenuation of various cable types. From the Antenna Book graph, 50 feet of RG213 has a loss of about 0.4 dB on 20 meters and less on 40. Any larger or lower-loss cable you use will have a loss of no more than a very small fraction of a dB less, so it's not worthwhile to use anything more expensive.

> 3. Do I need a 1:1 balun if i use a inverted V antenna with the above
> mentioned cables ? Can I just use a connector and hook up the cable
> directly ? I am asking this from the point of view of loss.

What the balun will do is prevent feedline radiation (and signal pickup). If your feedline runs close to house power wiring, telephone wiring, and the like, and if the feedline is a length that aggravates feedline current flow, a balun may reduce the loss. Otherwise it probably won't.

> 4. Is there a lot of activity in the 80 m band in CW QRP ? Is it worth
> considering designing a shortened 80 m antenna ?

I believe there's a fair amount of activity on 80 m CW QRP, but mostly in the more densely populated regions of the country. Here in Oregon it's a very tough band for QRP. The reason is that most major population centers are quite distant, and QRP has trouble competing with the high QRN levels on that band. Put this together with the poor characteristics of most back yard 80 meter antennas, and you can plan on doing an awful lot of calling with very few responses. I find 40 and 30 meters to be much more usable for QRP.

> 5. How do wave (antenna) traps work with 3W CW for multiband antennas
> (like inverted V) ? Has anyone used a wave trap for QRP successfully ?
> Where can I get details to build wave traps (I have never built wave
> traps so detailed instructions will help) ?

There's no difference between traps for QRP and for other powers. Even though you can make the traps physically smaller because you don't have to worry about voltages being as high, it's generally a good idea because it'll increase trap loss. I've used trapped antennas for QRP a number of times. But certain combinations with even fairly good traps can produce a dB or two of loss on one or another band. Consequently, I tend to avoid them. I've found them to be a reasonable compromise in some situations, though. You really should get a copy of the _ARRL Antenna Book_. It's a good source for information on building trap antennas and nearly any other antenna-related topic you're liable to encounter.

> 6. I have a radio shack portable communications RX. Has anyone used
> this
> radio for QRP RX. Can I just build a simple crystal controlled fixed
> freq. QRP TX and use the radio shack RX ? Has anyone tried this setup
> ?

I personally feel that running QRP is enough of a challenge without also limiting myself to one frequency. But I think there are quite a few folks running crystal controlled rigs, and they're surely having lots of fun. Judging by the number of people who respond a bit off frequency, I'd think that using a separate tunable receiver would be a great help.

> Please post and email replies to jayarajans@hotmail.com

I'm very sorry for the wide distribution here.

My father, an avid ham listener for years, is finally moving into a condo and selling his house, at my urging. He's got this immense wooden radio desk which was custom made for him by a carpenter friend of his who was also into ham radio. It's gotta be about 20 years old, but it is still in great shape due to the heavy wood construction. It also has a locking cabinet beneath.

The condo doesn't have room for this desk, so the desk is now up for grabs. Take it off my hands and you can have it for free. I'll even help you lift it into your vehicle (which, by the way, better be a truck or van). If absolutely necessary I can take a snapshot of it and send it to you. If I get no replies it will have to go out with the trash.

We live in South Eastern Pennsylvania, about 30 minutes outside of Philadelphia. Email me with all replies, I am not a regular reader of this newsgroup!
